

# At-A-Glance:

## A Summary of HIV/AIDS in Fresno County (2021)

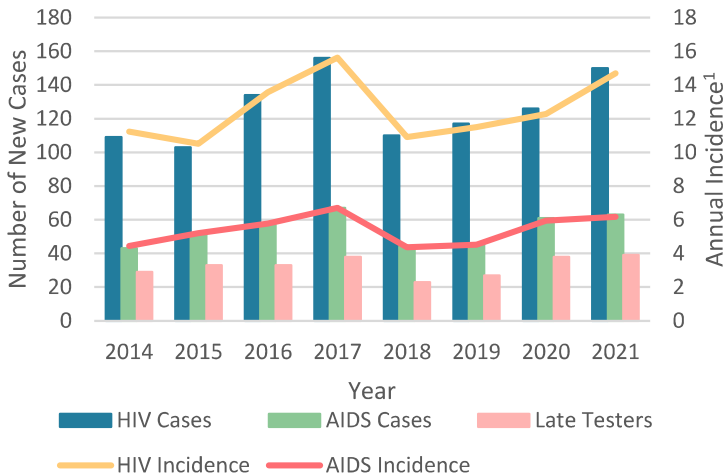

**Figure 1. Fresno County Most Likely Route of Transmission of HIV (2014–2021).** Most of the HIV transmission in the county has been linked to men who have sex with men (e.g., MSM), representing 64.7% of total new cases.

**Figure 2. Fresno County HIV Incident Cases by Age (2021).** Under 35 years of age represents just over 50% of all new HIV cases occurring in Fresno County.

**Figure 3. Fresno County’s HIV/AIDS Trends by Year (2014–2021).** This figure shows the number of new cases by year and its corresponding incidence rate<sup>1</sup>. “Late Testers” are qualified as individuals who converted from HIV to AIDS within 12 months of first HIV+ diagnosis. Fresno County had 39 Late Testers in the year 2021, up from 23 in 2018.

<sup>1</sup> Incidence is calculated per 100,000 persons  
<sup>2</sup> Rates were calculated using population data from CA Dept. of Finance

**Table 1. Fresno County HIV/AIDS Prevalence by Race & Ethnicity (2021).**

The total number of cases is higher in the Hispanic and White categories. However, the prevalence is highest amongst Blacks/African Americans, in both the HIV and AIDS categories.

Race/Ethnicity:	Prevalence <sup>1</sup> (N) <sup>2</sup>	
	HIV	AIDS
American Indian/ Alaskan Native	--	--
Asian/Pacific Islander	46 (46)	45 (45)
Black/African American	307 (153)	357 (178)
Hispanic/Latino <sup>3</sup>	115 (623)	117 (634)
White	92 (281)	87 (267)

**Note:** Some numbers have been censored due to low counts. Race/Ethnicity was not specified for 1.9% of HIV cases and 2.3% of AIDS cases in the 2021 year. Rates were calculated using population data from the California Department of Finance.

<sup>1</sup>Prevalence is calculated per 100,000 persons

<sup>2</sup>N represents the total cases in that category

<sup>3</sup>Hispanic or Latino may include people from any races (i.e. American Indian/Alaskan Native, Asian/Pacific Islander, Black, White, and Multi-Racial)

**Figure 4. Fresno County’s Incident Cases of HIV by Gender and Year (2014–2021).**

This figure shows the number of new cases, by year and gender, as well as its corresponding incidence rate<sup>1,2</sup>. While the incidence of females in Fresno County has remained relatively steady, the male incidence has been more variable. Males experienced an upward trend from 2015–2017, a decrease in incidence in 2018, remaining relatively stable until 2021, which saw a large increase from the previous year.

<sup>1</sup> Incidence is calculated per 100,000 persons of that gender  
<sup>2</sup> Rates were calculated using population data from CA Dept. of Finance
