

At-A-Glance:

A Summary of HIV/AIDS in Fresno County (2022)

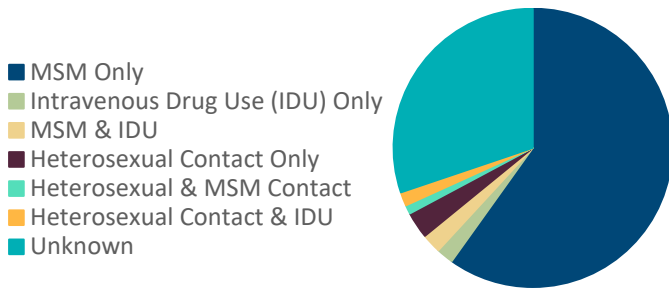

Figure 1. Fresno County Most Likely Route of Transmission of HIV (2015–2022). Most of the HIV transmission in the county has been linked to men who have sex with men (e.g., MSM), representing 60% of total new cases.

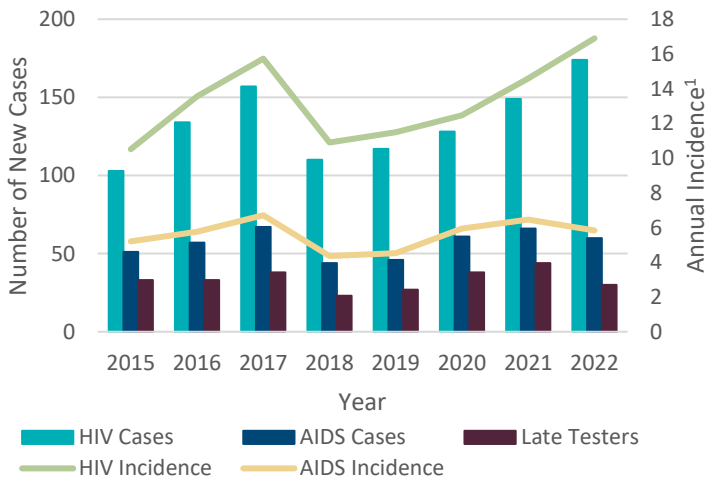

Figure 2. Fresno County HIV Incident Cases by Age (2022). Under 35 years of age represents just over 50% of all new HIV cases occurring in Fresno County.

Figure 3. Fresno County’s HIV/AIDS Trends by Year (2015–2022). This figure shows the number of new cases by year and its corresponding incidence rate¹. “Late Testers” are qualified as individuals who converted from HIV to AIDS within 12 months of first HIV+ diagnosis. Fresno County had 30 Late Testers in the year 2022, down from 44 in 2021.

¹ Incidence is calculated per 100,000 persons
² Rates were calculated using population data from CA Dept. of Finance

Table 1. Fresno County HIV/AIDS Prevalence by Race & Ethnicity (2022).

The total number of cases is higher in the Hispanic and White categories. However, the prevalence is highest amongst Blacks/African Americans, in both the HIV and AIDS categories.

Race/Ethnicity:	Prevalence ¹ (N) ²	
	HIV	AIDS
American Indian/ Alaskan Native	151 (10)	--
Asian/Pacific Islander	48 (48)	48 (48)
Black/African American	325 (164)	361 (182)
Hispanic/Latino ³	126 (685)	120(654)
White	98 (300)	87 (266)

Note: Some numbers have been censored due to low counts. Race/Ethnicity was not specified for 1.5% of HIV cases and 2.5% of AIDS cases in the 2021 year. Rates were calculated using population data from the California Department of Finance.

¹Prevalence is calculated per 100,000 persons

²N represents the total cases in that category

³Hispanic or Latino may include people from any races (i.e. American Indian/Alaskan Native, Asian/Pacific Islander, Black, White, and Multi-Racial)

Figure 4. Fresno County’s Incident Cases of HIV by Gender and Year (2015–2022).

This figure shows the number of new cases, by year and gender, as well as its corresponding incidence rate^{1,2}. Both females and males have experienced an upward trend in new HIV diagnoses for the last several years.

¹ Incidence is calculated per 100,000 persons of that gender

² Rates were calculated using population data from CA Dept. of Finance
