health incidence) and asthma-related emergency room visits (6.63 incidences per year, 0.0051% in background health incidence). The remaining health endpoints, including asthma-related hospital admissions, all cardiovascular-related hospital admissions (not including myocardial infarctions), all respiratory-related hospital admissions, and nonfatal acute myocardial infarction ranged from 0.52 to 3.17 incidences per year (0.00063% to 0.0029% in background health incidence) (Moreno Valley 2019).

O_3-related health outcomes attributed to the WLC project-related increases in ambient air concentrations from unmitigated emissions included respiratory-related hospital admissions (1.46 incidences per year, 0.00075% in background health incidence), mortality (0.69 incidences per year, 0.00033% in background health incidence), and asthma-related emergency room visits for any age range (lower than 8.20 incidences per year for all age groups, lower than 0.014% percent in background health incidence for all age groups) (Moreno Valley 2019).

The WLC HIA then concluded that "when taken into context, the small increase in incidences and the very small percent of the number of background incidences indicate that these health impacts are minimal in a developed, urban environment" (Moreno Valley 2019).

March Joint Powers Association K4 Warehouse and Cactus Channel Improvements EIR

The March JPA K4 project is located within Riverside County within the South Coast Air Basin. The proposed project involves the development of the five parcels on the 35.4-acre K4 Parcel with a 718,000-square-foot building conservatively assumed to be occupied by High-Cube ecommerce/fulfillment center use. The mitigated maximum daily operational emissions of relevant pollutants generated by the March JPA K4 were estimated to be 41.0 pounds per day of VOC, 253.0 pounds per day of NO_x, 1.4 pounds per day of SO_x, and 30.3 pounds per day of $PM_{2.5}$. The March JPA K4 HIA determined that, "for all these health endpoints, the number of estimated incidences is less than 0.0042% of the baseline number of incidences," and that "these health impacts are conservatively estimated, and the actual impacts may be zero" (March JPA 2019).

San Diego State University Mission Valley Campus Master Plan EIR

The SDSU project is located within the City of San Diego within the San Diego Air Basin. The SDSU project proposes construction and operation of the SDSU Mission Valley campus, stadium, parks, recreation, and innovation area to accommodate up to 15,000 full-time-equivalent students over time, resulting in a total student headcount of approximately 20,000 students. The maximum daily emissions of relevant pollutants generated by SDSU were estimated to be 314.1 pounds per day of VOC, 1,120.7 pounds per day of NO_x, 6.5 pounds per day of SO_2, and 205.9 pounds per day of $PM_{2.5}$ (SDSU 2019).

The $PM_{2.5}$-related health outcomes attributed to the SDSU project-related increases in ambient air concentrations included mortality (8.97 incidences per year, 0.0026% in background health incidence) and asthma-related emergency room visits (5.29 incidences per year, 0.0040% in background health incidence). The remaining health endpoints, including asthma-related hospital admissions, all cardiovascular-related hospital admissions (not including myocardial infarctions), all respiratory-related hospital admissions, and nonfatal acute myocardial infarction ranged from 0.00083 to 3.33 incidences per year (0.00223% to 0.00164% in background health incidence) (SDSU 2019).

O_3-related health outcomes attributed to the SDSU project-related increases in ambient air concentrations included respiratory-related hospital admissions (0.45 incidences per year, 0.0002% in background health incidence),

mortality (0.21 incidences per year, 0.00010% in background health incidence), asthma-related emergency room visits for age groups 0-17 (1.73 incidences per year, 0.003% percent in background health incidence), and asthma-related emergency room visits for age groups 18-99 (2.02 incidences per year, 0.002% percent in background health incidence) (SDSU 2019).

The SDSU HIA found that "health effects estimation using the log-linear method presumes that effects seen at large concentration differences can be linearly scaled down to small increases in concentration, with no consideration of potential thresholds below which health effects may occur; thus, this potentially overstates the potential effects. In summary, health effects are conservatively estimated, and the actual effects may be zero" (SDSU 2019).

Mineta San Jose Airport Amendment to the Airport Master Plan EIR

The San Jose Airport is located in Santa Clara County within the San Francisco Bay Area Air Basin. The San Jose Airport project includes amending the approved 2018 Airport Master Plan to a) shift the planning horizon year from 2027 to 2037, b) modifying future facility requirements at the airport to reflect updated demand forecasts, and c) modifying certain components of the airfield to reduce to potential for runway incursions (City of San Jose 2019). The estimated maximum daily incremental operational emissions of relevant pollutants generated by the San Jose Airport project were estimated to be -49.4 pounds per day of VOC, 5,325 pounds per day of NO_x, and 52 pounds per day of $PM_{2.5}$. However, the following emissions inventory was assumed for the HIA: 57.3 pounds per day of VOC, 5,643.0 pounds per day of NO_x, and 51.6 pounds per day of $PM_{2.5}$.

The San Jose Airport HIA estimated that the highest health endpoint from $PM_{2.5}$ was mortality at 4.46 incidences (0.0017% percent in background health incidence). All other $PM_{2.5}$-related health incidences ranged from 0.00022 to 1.89 (0.00027% to 0.0016% percent in background health incidence). For O_3-related health endpoints, the highest was emergency room visits for asthma, which was estimated to be 11.05 incidences (0.028% percent in background health incidence) for ages 0-17 and 14.59 incidences (0.019% percent in background health incidence) for ages 18-99 (City of San Jose 2019). Of the six examples discussed herein, the San Jose Airport resulted in the greatest O_3 incidences, which correlates with the estimated high emissions of O_3-precursors, specifically NO_x at 5,643 pounds per day. Nonetheless, the conclusion was that "when taken into context, the small increase in incidences and the very small percent of the number of background incidences indicate that these health impacts are negligible in a developed, urban environment" (City of San Jose 2019).

City of Inglewood Basketball and Entertainment Center Project EIR

The IBEC project HIA provides another important data point for consideration. The IBEC project consists of an arena designed to host the LA Clippers basketball team with up to 18,000 fixed seals for National Basketball Association games and up to 500 additional temporary seats for events such as family shows, concerts, conventions, corporate events, and non-LA Clippers sporting events. The IBEC project is located within Los Angeles County within the South Coast Air Basin. The IBEC EIR evaluated nine operational scenarios; across these multiple scenarios, the estimated maximum daily net increase in operational emissions of relevant pollutants was 94 pounds per day of VOC, 99 pounds per day of NO_x, 3 pounds per day of SO_x, and 89 pounds per day of $PM_{2.5}$.

The IBEC EIR analysis provided helpful context on using regional models for individual projects, as follows: "Generally, models that correlate criteria air pollutant concentrations with specific health effects focus on regulatory decision-making that will apply throughout an entire air basin or region. These models focus on the region-wide health effects of pollutants so that regulators can assess the costs and benefits of adopting a proposed regulation

that applies to an entire category of air pollutant sources, rather than the health effects related to emissions from a specific proposed project or source. Because of the scale of these analyses, any one project is likely to have only very small incremental effects which may be difficult to differentiate from the effects of air pollutant concentrations in an entire air basin. … For regional pollutants, it is difficult to trace a particular project's criteria air pollutant emissions to a specific health effect. Moreover, the modeled results may be misleading because the margin of error in such modeling is large enough that, even if the modeled results report a given health effect, the model is sufficiently imprecise that the actual effect may differ from the reported results; that is, the modeled results suggest precision, when in fact available models cannot be that precise on a project level" (City of Inglewood 2019).

For O_3-related health endpoints, emergency room visits for asthma was estimated to be 0.087 incidence per year for all studied age groups combined, 0.016 incidence per year of respiratory-related hospital admissions, and less than 0.02 incidence per year of mortality; the amount of estimated incremental health effects incidence is less than 0.0001% of the baseline number of health effects incidences in the study area.

A key finding from the IBEC HIA was that for $PM_{2.5}$-related health endpoints, due to the very small changes in ambient $PM_{2.5}$ concentrations as modeled by CMAQ, all of the estimated incremental health incidences were negative values. The IBEC HIA stated that this further confirms that the modeled $PM_{2.5}$ concentrations are within the model's margin of error, no meaningful conclusions can be reached on the specific health effects that may be caused by the proposed project O_3 precursor and $PM_{2.5}$ emissions, and health impacts may in fact be zero, and they would still be well within the models' margin of error (City of Inglewood 2019).

Summary

It is also important to note that while these results conclude that the project emissions do not result in a substantial increase in health incidences, the estimated emissions and assumed toxicity is also conservatively inputted into the HIA and thus, overestimate health incidences, particularly for $PM_{2.5}$. For example, as discussed in the San Jose Airport HIA, "the USEPA has also stated that results from various studies have shown the importance of considering particle size, composition, and particle source in determining the health impacts of PM. Further, USEPA found that studies have reported that particles from industrial sources and from coal combustion appear to be the most significant contributors to PM-related mortality, consistent with the findings by Rohr and Wyzga and others. This is particularly important to note here, as the majority of PM emissions generated from the project are from entrained roadway dust, and not from combustion. Therefore, by not considering the relative toxicity of PM components, the results presented here are conservative" (City of San Jose 2019).

As explained in the San Joaquin Valley APCD brief and noted previously, running the PGM used for predicting O_3 attainment with the emissions solely from an individual project like the Friant Ranch project or the project is not likely to yield valid information given the relative scale involved. The six examples discussed herein support the San Joaquin Valley APCD's brief contention that consistent, reliable, and meaningful results may not be provided by methods applied at this time. Accordingly, additional work in the industry and more importantly, air district participation, is needed to develop a more meaningful analysis to correlate project-level mass criteria air pollutant emissions and health effects for decision makers and the public. Furthermore, at the time of writing, none of the HIAs that were reviewed has concluded that health effects estimated using the PGM and BenMAP approach are substantial provided that the estimated project-generated incidences represent a very small percent of the number of background incidences, potentially within the models' margin of error.

Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool

The U.S. EPA's COBRA health impacts screening and mapping tool can explore how changes in air pollution, specifically $PM_{2.5}$ and O_3, from a policy, program, or other action can affect human health at the county, state, regional, or national levels. COBRA also estimates the economic value of the health benefits associated with changes in air pollution. COBRA can map and visually represent the air quality, human health, and health-related economic impacts from emissions of $PM_{2.5}$, SO_2, NO_X, NH_3, and VOCs that result from an action. Built into COBRA are emissions inventories, a simplified air quality model, health impact equations, and economic valuations ready for use, based on assumptions that the U.S. EPA currently uses as reasonable best estimates (EPA 2024a).

COBRA estimates changes in total annual ambient concentrations of $PM_{2.5}$, including primary $PM_{2.5}$ emissions and the formation of secondary $PM_{2.5}$ from precursor pollutants, such as SO_2, NO_x, NH_3, and VOCs. With the release of version 5.0 in 2024, COBRA now also estimates the impacts of changes in O_3 formation as a result of changes in pollutants assessed by the model, specifically NO_x and VOCs. COBRA uses a series of health impact functions, taken from the peer-reviewed epidemiological literature, to estimate how changes in outdoor air quality result in changes in the incidence of a variety of health outcomes (e.g., premature mortality, heart attacks, asthma exacerbation, lost workdays). Incidence refers to the number of new cases of a health outcome over a specified time period. Finally, COBRA multiplies the change in incidence for each health outcome by a monetary value specific to that outcome. COBRA outputs the Health Effects and Valuation Results which includes a table of nationwide results as COBRA calculates health benefits in all counties in the contiguous United States due to the transport of outdoor air pollutants between counties and states. Accordingly, results are available for a particular state or county and are also provided in map form. Both the table and the map provide county-level changes in air quality (e.g., total annual average $PM_{2.5}$ concentration in $\mu g/m^3$), incidence of each health endpoint, and associated economic values. COBRA provides estimates on changes in mortality, infant mortality, nonfatal heart attacks, respiratory hospital admissions, cardiovascular hospital admissions, acute bronchitis, emergency room visits, work loss days, and asthma exacerbation. (EPA 2024a)

The change in incidence is not necessarily a whole number because COBRA calculates small statistical risk reductions that are then aggregated over the entire population. Estimates of health impacts have a direct relationship with population density: areas with higher population density tend to see higher health benefits of reduced emissions than less dense areas (EPA 2024a). This is because there are more people breathing cleaner air in the areas with higher population density. The reverse would also be true where areas with higher population density tend to see higher adverse health consequences of increased emissions compared to less dense areas.

COBRA contains detailed emission estimates of $PM_{2.5}$, SO_2, NO_X, and VOCs for the year 2016, and detailed projections for 2023 and 2028 as developed by the U.S. EPA. Users create their own scenario by specifying increases or decreases to one of the three baseline emission estimates - 2016, 2023, or 2028 (EPA 2024a). These baselines account for federal and state regulations as of May 2018.

EPA states that those who should use COBRA includes but is not limited to "analysts looking to improve their understanding of the air, health, and related economic benefits of clean energy or other policies that reduce emissions" and "environmental agencies interested in reviewing many options to identify policies that maximize health and economic benefits" (EPA 2024b). COBRA was originally developed by Abt Associates Inc. in 2002 and updated in 2012, 2017, 2020, 2021, and 2024 (EPA 2024a). COBRA is based on rigorous methods used by EPA health benefits assessments and adapted for use as a screening model.

Based on the EPA records of COBRA citations, it was used by at least approximately 150 publications as of April 24, 2024. Many of the publications evaluated programs, policies, or large areas of potential effect such as statewide efforts. The only environmental analysis was an Environmental Impact Statement for New York State's procurement of offshore wind energy; no CEQA analyses were cited (EPA 2024c). This publication list supports EPA's statement that COBRA is a valid modeling tool for state and local governments to (1) better understand the potential for clean energy to enhance air quality, health, and well-being, (2) design or select program options that maximize benefits, (3) build support for clean energy investments based on the air quality and health benefits, (4) narrow a list of policy options to those that should be evaluated using more sophisticated air quality models, (5) present information about localized health benefits in easy–to–interpret tables and maps, and (6) support a balanced decision-making process that considers both the potential costs and benefits of policy options (EPA 2024d). However, this publication list also supports that COBRA is better fit for broad analyses, such as policies and programs undertaken by state governments, rather than a CEQA analysis for an individual project.

In EPA's COBRA Questions and Answers, it addresses the question of "what is the difference between COBRA and BenMAP?" (BenMAP described in the above sections) and states that, "The key difference between BenMAP and COBRA is that COBRA has a built-in, reduced-form air quality model, while BenMAP does not. To convert changes in air pollution to changes in air quality, a tool will need an air quality model. Because BenMAP does not have this built-in model, it requires inputs of the changes in air quality rather than emissions. BenMAP users can utilize standalone air quality models, such as the Community Multi-scale Air Quality Model (CMAQ), to determine air quality changes. Additionally, BenMAP can be used to analyze health impacts at a finer geographic resolution than COBRA, depending on the scale of the air quality data that users provide. BenMAP also includes preloaded population and baseline health incidence data forecasts for all years out to 2050. COBRA only analyzes health impacts at the county-level and baseline health incidence data for 2016, 2023, and 2028. However, the desktop edition of COBRA also has advanced features that allow the user to import inputs for other years. Apart from these differences, COBRA and BenMAP both use the same approach to estimating health impacts, and both tools use the same default concentration-response functions and economic valuation functions for their calculations." (EPA 2024e)

5 Evaluation of the Project's Health Effects

Based on the evaluation of methods available provided in Section 4, this evaluation does not attempt to quantify health effects, but builds upon the discussion provided in Sections 2 and 3 to disclose potential health effects associated with the project. As explained in Section 2, the EPA and CARB have established AAQS at levels above which concentrations could be harmful to human health and welfare, with an adequate margin of safety. Further, California air districts have established emission-based thresholds that provide project-level estimates of criteria air pollutant quantities that air basins can accommodate without affecting the attainment dates for the AAQS. Accordingly, elevated levels of criteria air pollutants as a result of a project's emissions could cause adverse health effects associated with these pollutants.

Construction and operation of the project would not result in exceedances of regional thresholds for emissions of VOCs, NO_x, CO, PM_{10}, and $PM_{2.5}$.

As discussed in above, health effects associated with O_3 include respiratory symptoms, worsening of lung disease leading to premature death, and damage to lung tissue. VOCs and NO_x are precursors to O_3 and the contribution of VOCs and NO_x to regional ambient O_3 concentrations is the result of complex photochemistry. The increases in O_3 concentrations due to O_3 precursor emissions tend to be found downwind of the source location because of the

time required for the photochemical reactions to occur. Further, the potential for exacerbating excessive O_3 concentrations would also depend on the time of year that the VOC emissions would occur, because exceedances of the O_3 NAAQS and CAAQS tend to occur between April and October when solar radiation is highest. As described above, due to the lack of quantitative methods to assess this complex photochemistry, the holistic effect of a single project's emissions of O_3 precursors is speculative.

Health effects associated with NO_x and NO_2 (which is a constituent of NO_x) include lung irritation and enhanced allergic responses. Project-related NO_x emissions would not exceed the applicable NO_x thresholds. However, all those air districts are designated as attainment areas for NO_2 (and NO_2 is a constituent of NO_x). Accordingly, project-generated NOx emissions may not cause an exceedance of the NAAQS and CAAQS for NO_2 or result in potential health effects associated with NO_2 and NO_x.

Health effects associated with CO include chest pain in patients with heart disease, headache, light-headedness, and reduced mental alertness. CO tends to be a localized impact associated with congested intersections. The potential for CO hotspots is discussed under Impact AQ-3 in the main report and determined to be less than significant. Thus, the project's CO emissions would not contribute to significant health effects associated with CO.

Health effects associated with PM_{10} and $PM_{2.5}$ include premature death and hospitalization, primarily for worsening of respiratory disease. Project-related PM_{10} emissions would not exceed the applicable PM_{10} threshold.

While the above scientific and technological constraints present considerable doubt that quantifying health effects for individual CEQA projects may not accurately and meaningfully inform the public of how project-generated bare numbers (i.e., estimated criteria air pollutant emissions) translate to create potential adverse health effects, due to the size and scale of the project, additional analysis is presented below for emissions occurring within Lassen County, Tuolumne County, and San Joaquin County, where the two pellet facilities and the Port of Stockton are located, respectively, as well as for all project emissions within the State.

Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool Results

To estimate the potential health effects of the project, the US EPA's COBRA screening model was used to estimate how changes in air pollution from the project can affect human health at the county, state, regional, or national levels (EPA 2021). (COBRA is explained in detail above). The analysis year of 2028 was selected in COBRA as it is closest to the operational year in the project. Fresno County was selected for the location. To support this CEQA evaluation, the national level change in incidents rate was not included. The emissions estimated using the methodologies in Section 2.4.2 of the main report were assumed for each location. As this tool is based on long-term exposure and health effects, emissions from operation were used. A discount rate of 2% was selected as it is the default. COBRA assumes changes in adult mortality and non-fatal heart attacks occur over a 20-year period.

For Fresno County,[6] O_3 and $PM_{2.5}$ related health outcomes attributed to project-related increases in ambient air concentrations included asthma-related emergency room visits (0.00003 incidences per year), lung cancer incidence (0.000003 incidences per year), all cardiovascular-related hospital admissions (not including myocardial infarctions) (0.000002 incidences per year), all respiratory-related hospital admissions (0.0001 incidences per

[6] The COBRA inputs for mitigated annual criteria air pollutant emissions within Fresno County include the following: 0.02 per year VOC, 0.01 tons per year NO_x, 0.0004 tons per year SO_2, and 0.01 tons per year $PM_{2.5}$.

year), mortality (0.00004 incidences per year), and nonfatal acute myocardial infarction (less than 0.00003 incidences per year for all age groups). For context, between 2020-2022, the CDPH reported that Fresno County had an annual average of 6,890 mortalities from all causes and an age-adjusted death rate of 870.2 mortalities per 100,000 population (CDPH 2024).

In summary, although the project has the potential to result in health effects associated with emissions of criteria air pollutants as described above, there are numerous scientific and technological complexities associated with correlating criteria air pollutant emissions from an individual project to specific health effects or potential additional nonattainment days, and methods available to quantitatively evaluate health effects may not be appropriate to apply to emissions associated with the project, which cannot be estimated with a high-level of accuracy. Nonetheless, additional information is provided to support impact conclusions in the air quality analysis that explains what is known and what is not given constraints.

subject	Heartland Solar Project

Discussion

The Heartland Solar Project would include an energy storage facility with a capacity of 4 hours of 300 megawatts alternating current (MWac). In other words, the energy storage facility would be able to discharge up to 4 hours of 300 MWac power to the PG&E electricity grid every day. However, energy storage facilities are not completely efficient, meaning more electricity must be charged to the system than can be later discharged. Round-trip efficiency is the percentage of electricity put into storage that can be retrieved later. The higher the round-trip efficiency, the less energy is lost in the storage process. According to data from the U.S. Energy Information Administration, in 2019, the U.S. utility-scale battery fleet operated with an average monthly round-trip efficiency of 82 percent (TEF, 2025). Therefore, assuming this round-trip efficiency, the proposed system would require a charge of approximately 4.9 hours in order to later discharge 4.0 hours. This would result in a net consumption of PG&E grid electricity of approximately 0.9 hour per day or 320 hours per year of 300 MWac, which would equal approximately 96,146 megawatt hours (MWh)/year (see attached for calculations).

Applying GHG intensity factors per MWh used in the Heartland Solar AQ-GHG Technical Report (Dudek, 2025; see PDF page 365) to estimate displaced GHG emissions that would be associated with the Heartland Solar Plant, it is estimated that the total indirect GHG emissions generated associated with the net electricity consumption for the proposed energy storage facility would total approximately 46,992 metric tons of carbon dioxide equivalent (CO_2e) over the 30-year life of the Project, which would equal an amortized rate of approximately 1,566 metric tons CO_2e per year. Refer to the attachment for the energy and indirect GHG estimates that would be associated with the proposed Heartland Solar Project energy storage facility.

Energy and Indirect GHG Estimates

EXECUTIVE SUMMARY

Heartland Hydrogen, LLC and Heartland Solar 1, LLC propose to generate hydrogen fuel from renewable sources including solar photovoltaic (PV) power and treated wastewater. The hydrogen facility, solar facility, and water treatment facility together constitute the Heartland Hydrogen Project (Project). Hydrogen fuel production and solar energy generation would occur on Westlands Water District (WWD)- owned land in western Fresno County, and a tertiary wastewater treatment plant would be constructed in the City of Mendota at the existing Mendota wastewater treatment plant to provide recycled water needed for the hydrogen facility. The Project would rely on the PV solar cells to convert sunlight into electricity, which would be used to split the recycled water into hydrogen and oxygen (electrolysis). The Project also includes an electrical interconnection service line to the existing Tranquillity Switching Station.

The Fresno County portion of the Project site is located in an unincorporated area 10 miles east of Interstate 5. It is located east of Los Angeles Avenue, south of W. American Avenue, west of State Route 33 (SR 33, also called S. Derrick Avenue), north of Manning Avenue, and 1.25 miles north of the Tranquillity Switching Station. It also is located adjacent to the northern boundary of the proposed Sonrisa Solar facility and across SR 33 from the existing Adams East Solar facility. The City of Mendota portion of the Project site is within the fence line of the existing wastewater treatment plant located at 3699 Bass Avenue, Mendota. The term "Project site" as used in this report includes the Fresno County and City of Mendota portions of the Project site, including the electrical interconnection service line corridor.

The intent and scope of this report is to characterize biological resources in the areas that will be permanently or temporarily affected by the Project. The Study Area for this report includes the approximately 2,320-acre Project site, and suitable nest trees within 0.5 mile. The Fresno County portion of the Study Area consists primarily of disturbed and cultivated lands previously used for agricultural production; the City of Mendota portion of the Project site is within the fence line of the existing wastewater treatment plant. The heavily modified lands that make up the Project site do not support sensitive natural communities. State or federally-jurisdictional waters or wetlands also do not occur in the Study Area. Land covers observed during the survey included developed/disturbed lands, agricultural land, non-native annual grassland, and eucalyptus grove. Focused surveys for special-status plants and wildlife were not conducted as part of ESA's reconnaissance-level review; however, such species were noted when encountered.

One reconnaissance-level survey was conducted in April 2022 to characterize biological resources in the Study Area. No special-status plant species were observed, nor are any expected due to the high level of disturbance of the Project site lands. Special-status wildlife species with potential to occur in the Study Area include Swainson's hawk (observed), tricolored blackbird, San Joaquin kit fox, loggerhead shrike (observed), western burrowing owl, American badger,

western red bat, and greater western mastiff bat. Mature eucalyptus, tamarisk and willow trees within the Study Area contained actively nesting birds including Swainson's hawk, loggerhead shrike, and great horned owl, as well as other smaller birds. The Study Area is not located within critical habitat for any species. Due to the restrictions for wildlife movement, the Study Area is not likely to be used as a wildlife movement corridor.

CHAPTER 1
Introduction

1.1 Background and Purpose

This report presents the findings of a reconnaissance-level biological resources survey that was performed on April 6, 2022, to identify potential presence and habitat for of common and special-status plant and wildlife species, nesting birds, and sensitive natural communities at the proposed Heartland Hydrogen Project site in Fresno County, California. The intent and scope of this document is to characterize these biological resources in the area and provide recommendations to avoid and minimize potential impacts to sensitive resources, when present.

1.2 Property Location

The Project site is located in the San Joaquin Valley in the Coit Ranch and Mendota Dam, California 7.5-minute U.S. Geological Survey quadrangles. Specifically, the Fresno County portion of the Project site is bounded by West American Avenue to the north, Los Angeles Avenue to the west, and Manning Avenue to the south, and SR-33 to the east. The City of Mendota portion of the Project site is located within the City's existing wastewater treatment plan at 2699 Bass Avenue. See **Figure 1**.

Project Area

CHAPTER 2
Regulatory Context

Biological resources in the Study Area may fall under the jurisdiction of various regulatory agencies. The following federal, State, and local laws, ordinances and regulations apply to biological resources in the Study Area.

2.1 Federal

Endangered Species Act of 1973, as amended (16 U.S.C. §§1531-1543)

The federal Endangered Species Act of 1973 (FESA) and subsequent amendments provide guidance for the conservation of endangered and threatened species and the ecosystems upon which they depend. In addition, the FESA defines species as threatened or endangered and provides regulatory protection for listed species. The FESA also provides a program for the conservation and recovery of threatened and endangered species as well as the conservation of designated critical habitat that the United States Fish and Wildlife Service (USFWS) determines is required for the survival and recovery of these listed species.

Section 9 lists those actions that are prohibited under the FESA. The definition of "take" includes to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. Although unauthorized take of a listed species is prohibited, take may be allowed when it is incidental to an otherwise legal activity. Section 9 prohibits take of listed species of fish, wildlife, and plants without special exemption. The definition of "harm" includes significant habitat modification or degradation that results in death or injury to listed species by significantly impairing behavioral patterns related to breeding, feeding, or shelter. "Harass" is defined as actions that create the likelihood of injury to listed species by disrupting normal behavioral patterns related to breeding, feeding, and shelter significantly.

Section 10 provides a means whereby a nonfederal action with the potential to result in take of a listed species can be allowed under an incidental take permit.

Migratory Bird Treaty Act (16 U.S.C. §§703-711)

The Migratory Bird Treaty Act (MBTA) is the domestic law that affirms and implements a commitment by the U.S. to four international conventions (with Canada, Mexico, Japan, and Russia) for the protection of a shared migratory bird resource. Unless and except as permitted by regulations, the MBTA makes it unlawful at any time, by any means, or in any manner to intentionally pursue, hunt, take, capture, or kill migratory birds anywhere in the United States. The

law also applies to disturbance and removal of nests occupied by migratory birds or their eggs during the breeding season, whether intentional or incidental.

Bald and Golden Eagle Protection Act of 1940 (16 U.S.C. §668)

The federal Bald and Golden Eagle Protection Act protects bald and golden eagles by prohibiting the taking, possession, and commerce of such birds and establishes civil penalties for violation of this act. Take of bald and golden eagles includes to "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb" (16 U.S.C. §668c). "Disturb" means to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available: (1) injury to an eagle, (2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or (3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior (72 Fed. Reg. 31132; 50 CFR §22.3).

2.2 State

California Endangered Species Act (Fish and Game Code §2050 et seq.)

The California Endangered Species Act (CESA) establishes the policy of the state to conserve, protect, restore, and enhance threatened or endangered species and their habitats. The CESA mandates that state agencies should not approve projects that would jeopardize the continued existence of threatened or endangered species if reasonable and prudent alternatives are available that would avoid jeopardy. For projects that would affect a listed species under both the CESA and the FESA, compliance with the FESA would satisfy the CESA if the California Department of Fish and Wildlife (CDFW) determines that the federal incidental take authorization is "consistent" with the CESA under Fish and Game Code Section 2080.1. Before a project results in take of a species listed under the CESA, a take permit must be issued under Section 2081(b).

Fish and Game Code Sections 2080 and 2081

Section 2080 of the Fish and Game Code states, "No person shall import into this state [California], export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the [State Fish and Game] Commission determines to be an endangered species or threatened species, or attempt any of those acts, except as otherwise provided in this chapter, or the Native Plant Protection Act, or the California Desert Native Plants Act." Pursuant to Section 2081, CDFW may authorize individuals or public agencies to import, export, take, or possess state-listed endangered, threatened, or candidate species. These otherwise prohibited acts may be authorized through permits or Memoranda of Understanding, if the take is incidental to an otherwise lawful activity, impacts of the authorized take are minimized and fully mitigated, the permit is consistent with any regulations adopted pursuant to any recovery plan for the species, and the project operator ensures adequate funding to implement the measures required by CDFW. CDFW makes this determination based on available scientific information and considers the ability of the species to survive and reproduce.

Fish and Game Code Sections 3503, 3503.5, and 3513

Under these sections of the Fish and Game Code, a project operator is not allowed to conduct activities that would result in the taking, possessing, or destroying of any birds of prey; the taking or possessing of any migratory nongame bird; the taking, possessing, or needlessly destroying of the nest or eggs of any raptors or nongame birds; or the taking of any nongame bird pursuant to Fish and Game Code Section 3800, whether intentional or incidental.

California Environmental Quality Act Guidelines Section 15380

In addition to the protections provided by specific federal and state statutes, California Environmental Quality Act (CEQA) Guidelines Section 15380(b) provides that a species not listed on the federal or state list of protected species nonetheless may be considered rare or endangered for purposes of CEQA if the species can be shown to meet certain specified criteria:

(A) Although not presently threatened with extinction, the species is existing in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or

(B) The species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in the Federal Endangered Species Act.

2.3 Local

Fresno County 2000 General Plan

The Fresno County General Plan (Fresno County 2000) outlines several policies intended for the protection of biological resources County-wide, including the following, which apply to the Project:

> ***Policy OS-E.1:*** The County shall support efforts to avoid the "net" loss of important wildlife habitat where practicable. In cases where habitat loss cannot be avoided, the County shall impose adequate mitigation for the loss of wildlife habitat that is critical to supporting special-status species and/or other valuable or unique wildlife resources. Mitigation shall be at sufficient ratios to replace the function, and value of the habitat that was removed or degraded. Mitigation may be achieved through any combination of creation, restoration, conservation easements, and/or mitigation banking. Conservation easements should include provisions for maintenance and management in perpetuity. The County shall recommend coordination with the U.S. Fish and Wildlife Service and the California Department of Fish and Game to ensure that appropriate mitigation measures and the concerns of these agencies are adequately addressed. Important habitat and habitat components include nesting, breeding, and foraging areas, important spawning grounds, migratory routes, migratory stopover areas, oak woodlands, vernal pools, wildlife movement corridors, and other unique wildlife habitats (e.g., alkali scrub) critical to protecting and sustaining wildlife populations.
>
> ***Policy OS-E.2:*** The County shall require adequate buffer zones between construction activities and significant wildlife resources, including both on-site habitats that are purposely avoided and significant habitats that are adjacent to the project site, in order to avoid the degradation and disruption of critical life cycle activities such as breeding and

feeding. The width of the buffer zone should vary depending on the location, species, etc. A final determination shall be made based on informal consultation with the U.S. Fish and Wildlife Service and/or the California Department of Fish and Game.

Policy OS-E.3: The County shall require development in areas known to have particular value for wildlife to be carefully planned and, where possible, located so that the value of the habitat for wildlife is maintained.

Policy OS-E.4: The County shall encourage private landowners to adopt sound wildlife habitat management practices, as recommended by the California Department of Fish and Game officials and the U.S. Fish and Wildlife Service.

Policy OS-E.9: Prior to approval of discretionary development permits, the County shall require, as part of any required environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based upon field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant resources and/or special-status plants or animals. Such evaluation will consider the potential for significant impact on these resources and will either identify feasible mitigation measures or indicate why mitigation is not feasible.

Policy OS-F.5: The County shall establish procedures for identifying and preserving rare, threatened, and endangered plant species that may be adversely affected by public or private development projects. The County shall require, as part of the environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based on field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant plant resources and/or special-status plant species. Such evaluation shall consider the potential for significant impact on these resources and shall either identify feasible mitigation measures or indicate why mitigation is not feasible.

Policy OS-F.7: The County should encourage landowners to maintain natural vegetation or plant suitable vegetation along fence lines, drainage and irrigation ditches and on unused or marginal land for the benefit of wildlife.

Policy LU-B.13: In conjunction with environmental reviews under CEQA, the County shall require applicants to identify biological resources to determine if there are sensitive and/or important flora and fauna that require special protection measures.

Program LU-A.C: The County shall develop and implement guidelines for design and maintenance of buffers to be required when new non-agricultural uses are approved in agricultural areas. Buffer design and maintenance guidelines shall include, but not be limited to, the following:

a. Buffers shall be physically and biologically designed to avoid conflicts between agriculture and non-agricultural uses.

b. Buffers shall be located on the parcel for which a permit is sought and shall protect the maximum amount of farmable land.

c. Buffers generally shall consist of a physical separation between agricultural and non-agricultural uses. The appropriate width shall be determined on a site-by-site basis taking into account the type of existing agricultural uses, the nature of the proposed

development, the natural features of the site, and any other factors that affect the specific situation.

d. Appropriate types of land uses for buffers include compatible agriculture, open space and recreational uses such as parks and golf courses, industrial uses, and cemeteries.

e. The County may condition its approval of a project on the ongoing maintenance of buffers.

Fresno County Code

Chapter 13.12 – Trees and Shrubs: This section establishes permit rules for tree planting and landscaping, including species of trees, planting locations and irrigation regimes.

City of Mendota General Plan

Goal OSC – 7: Preservation of important ecological and biological resources, including habitat for flora and fauna.

Policy OSC-7.1: The City shall require a biological resources evaluation for private and public development projects in areas identified to contain or possibly contain listed plant and/or wildlife species based upon the City's biological resource mapping provided in the General Plan EIR or other technical materials. This evaluation shall be conducted prior to the authorization of any ground disturbance.

Policy OSC-7.2: For those areas in which special status species are found or likely to occur or where the presence of species can be reasonably inferred, the City shall require mitigation of impacts to those species. Mitigation shall be designed by the City in coordination with USFWS and the California Department of Fish and Game (CDFG), and shall emphasize a multi-species approach to the maximum extent feasible. This may include development or participation in a habitat conservation plan.

Policy OSC-7.3: The City shall encourage creation of habitat preserves that are immediately adjacent to each other in order to provide interconnected open space areas for animal movement.

Policy OSC-7.4: The City shall adopt and maintain a Noxious Weed Ordinance. The Noxious Weed Ordinance shall include regulatory standards for construction activities that occur adjacent to natural areas to inhibit the establishment of noxious weeds through accidental seed import.

Policy OSC-7.5 If habitat for Swainson's hawk is present, a protocol-level survey shall be conducted in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000), to include the following:

1) Schedule construction activities to avoid nesting activities. The avian breeding window on average is between February 1 and August 30, which complies with the Migratory Bird Treaty Act and Section 3503.5 of the [Fish and Game Code], therefore construction activities should occur between September and January.

2) Conduct all vegetation clearing (including trees, shrubs and bushes) outside of the nesting season. If clearing of any vegetation and/or construction activities occur

during the avian breeding window, then preconstruction surveys for nesting raptors shall be conducted up to 30 days before construction. The qualified biologist shall survey the construction zone and a 100-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm the nesting birds.

3) If an active nest is located within the 100-foot area surrounding the construction zone and construction must take place during the breeding season, a buffer zone shall be established by the biologist and confirmed by the appropriate resource agency and a qualified wildlife biologist shall monitor the nest to determine when the young have fledged and submit bi-weekly reports to City of Mendota Planning Department throughout the nesting season.

The biological monitor shall have the authority to cease construction if there is any sign of distress to the raptor. Reference to this requirement, the MBTA, and Section 3503.5 of the [Fish and Game Code] shall be included in the construction specifications.

Policy OSC-7.6: The City shall protect and preserve Swainson's hawk nesting and foraging habitat the implementation of the following:

1) Development of an ordinance that shall apply to projects that are five acres or more in size since this is recognized to be the minimum acreage required for viable Swainson's hawk foraging habitat.

2) The project Applicant shall acquire conservation easements or other instruments to preserve suitable foraging habitat for Swainson's hawk, as determined by [CDFW], on a 1:1 ratio.

3) For projects less than 40 acres in size, it may be infeasible to acquire easements for less than 40 acres and project proponents should have the option to mitigate adverse impacts to Swainson's hawk foraging habitat through the payment of an impact mitigation fee.

POLICY OSC-7.8 Encourage the recovery of Federal and State sensitive species and Local Species of Concern in accordance with The Recovery Plan for the San Joaquin Valley (USFWS 1998).

CHAPTER 3
Methods

3.1 Study Area

The Project site, consisting of the hydrogen and solar generation sites, the service line, and the Mendota wastewater treatment facility parcel constitute the Study Area for wildlife, plants, and natural communities (**Figure 2a and 2b**).

3.2 Survey Methodology

3.2.1 Survey Dates and Surveying Personnel

One reconnaissance-level survey was conducted to observe and characterize vegetation communities in the Study Area and to assess habitat quality and potential for common and special-status wildlife species. The survey was conducted by ESA biologists Leonard Liu and Liza Ryan on April 6, 2022. No focused USFWS protocol-level surveys were conducted for this report; however, in 2018, Dudek conducted focused surveys for rare plants, San Joaquin kit fox (*Vulpes macrotis mutica*), burrowing owl (*Athene cunicularia*), American badger (*Taxidea taxus*) and Swainson's hawk (*Buteo swainsoni*) (Dudek 2022). Heritage conducted protocol-level Swainson's hawk surveys in 2021 (Heritage 2021). Where they continue to be relevant, the 2018 and 2021 survey results are reflected in this biological report.

3.2.2 Habitat and Vegetation Surveys

Existing vegetation classification data was available for the Study Area from Dudek's 2018 vegetation and land cover surveys (Dudek 2022). ESA verified the accuracy of the 2018 survey during the April 2022 reconnaissance survey.

3.2.3 Wildlife Surveys

Wildlife surveys cataloged common and special-status wildlife species that were observed in the Study Area and characterized the potential presence of suitable habitat for such species. Wildlife surveys were conducted by qualified biologists by visual observation while walking or driving in the Study Area. All wildlife species that were encountered were recorded. Any special-status species encountered were mapped and GPS coordinates were collected for each occurrence. Active raptor and migratory bird nests observed were mapped and GPS coordinates were collected.

Biological Resources

3.3 Review of Background Information

Prior to the reconnaissance survey, ESA reviewed publicly available and subscription-based biological resource data. Data sources that assisted in this analysis include:

- Historic and current aerial imagery (Google)
- California Wildlife Habitat Relationships (CWHR) database
- The CDFW California Natural Diversity Database (CNDDB) for Coit Ranch and surrounding 8 quadrangles
- USFWS Information for Planning and Consultation (IPaC) species list for the Project footprint
- The California Native Plant Society (CNPS) online database for Coit Ranch and surrounding 8 quadrangles
- Soil maps from the National Resource Conservation Service (NRCS)
- Previous biological surveys for Heartland (Dudek 2022; Heritage 2021), and the area surrounding the wastewater treatment facility (Wood 2020)

CHAPTER 4
Environmental Setting

This chapter provides the environmental baseline for natural communities, land cover, habitats, wetlands, and special-status plant and wildlife species in the Study Area. The Study Area consists of flat terrain approximately 185 to 195 feet above mean sea level (amsl) (Dudek 2022).

4.1 Natural Communities and Associated Wildlife Habitats

Community types identified in the Fresno County portion of the Study Area included non-native annual grassland and agricultural land (Dudek 2022). Developed/disturbed land cover is not considered a natural community type. The nearest area supporting natural habitats are the Mendota Wildlife Area and Fresno Slough (2.3 miles northeast) and the interior Coast Range (over 6 miles southwest, across Interstate 5). The Mendota wastewater treatment facility portion of the Study Area consisted of a spoils pile, with sparse vegetation and no trees.

Natural communities are assemblages of plant species that occur together in the same area and are defined by species composition and relative abundance. The natural community classification presented herein is based on field observations, and the *Manual of California Vegetation Second Edition* (Sawyer et al. 2009). Natural communities generally correlate with wildlife habitat types; wildlife habitats were classified and evaluated using the *A Guide to Wildlife Habitats of California* (Mayer and Laudenslayer, 1988). Dudek conducted vegetation and land cover surveys for the Fresno County portion of the Study Area (excluding the service line) and identified agricultural land, ruderal lands, disturbed lands, and eucalyptus groves, tamarisk (*Tamarix ramosissima*) and scrubland communities (Dudek 2022). ESA conducted vegetation and land cover surveys for the service line and the City of Mendota portion of the Study Area in April 2022 and identified grassland, eucalyptus, agricultural lands and disturbed lands, as described below.

4.1.1 Grassland

Grasslands are an herbaceous natural community dominated by grasses, forbs, and other plants. This natural community is present on the margins in the Study Area in areas that are not disked for agriculture. Non-native grasslands are dominated by non-native, annual species including slender wild oat (*Avena barbata*), rip-gut brome (*Bromus diandrus*) and foxtail brome (*B. madritensis*). The associated herbaceous cover includes non-native yellow star thistle (*Centaurea solstitialis*), black mustard (*Brassica nigra*), and wild geranium (*Geranium dissectum*).

Annual grasslands provide foraging and limited breeding habitat for wildlife. Reptiles such as the western fence lizard (*Sceloporus occidentalis*), common garter snake (*Thamnophis sirtalis*), and gopher snake (*Pituophis melanoleucus*), and birds such as western bluebird (*Sialia mexicana*), western meadowlark (*Sturnella neglecta*), lesser goldfinch (*Spinus psaltria*), and barn swallow (*Hirundo rustica*) may be present. Small mammals may include deer mouse (*Mus musculus*), California vole (*Microtus californicus*), or black-tailed jackrabbit (*Lepus californicus*). Raptors including red-tailed hawk (*Buteo jamaicensis*) and American kestrel (*Falco sparverius*) may forage on the rodents. Non-native grasslands are also important foraging grounds for bat species including myotis (*Myotis* sp.) and pallid bats (*Antrozous pallidus*). A list of wildlife species that were observed during the April 2022 survey is provided in Appendix C.

4.1.2 Eucalyptus

Eucalyptus (*Eucalyptus* sp.) groves are considered semi-natural in California as they are composed of non-native species (Sawyer et al. 2009). Eucalyptus trees are the dominant tree canopy, with sparse understory shrub and herbaceous layers. In the Study Area, two small eucalyptus groves are present with saltbush shrubs, tamarisk trees, and non-native brome grasses also present. On Figure 2a, these areas are indicated by the presence of bird nests within the site boundary. Due to the paucity of trees in the region, these eucalyptus groves are havens for wildlife, with nesting sites for raptors, including Swainson's hawk, red-tailed hawk (*Buteo jamaicensis*), and great horned owl (*Bubo virginianus*), as well as smaller birds, including loggerhead shrike (*Lanius ludovicianus*) and house finch (*Haemorhous mexicanus*). Small mammals and reptiles may also be present in the shrubs or leaf litter.

4.1.3 Agricultural Lands

Agricultural lands cover most of the Fresno County portion of the Study Area and were fallow at the time of the reconnaissance survey. Department of Agriculture data indicated that this portion of the Study Area was under wheat production through 2018 (Dudek 2022). The presently fallowed fields are largely barren of vegetation except for ruderal, non-native grasses in the margins. Similar wildlife species to non-native grasslands may be present foraging or living in agricultural fields, though disking prevents digging of rodent burrows.

4.1.4 Developed/ Disturbed

Description

Developed/disturbed portions of the Study Area include dirt roads by the hydrogen and solar generation site, gravel along the planned service line near the substation, and the spoils pile at the wastewater treatment facility. These are mainly barren grounds subject to continued disturbance and supporting minimal vegetation. Developed/ disturbed land cover generally does not provide suitable habitat for plant or wildlife species, though small mammal burrows and ruderal plant species may be present, and migratory birds such as red-tailed hawk or western kingbird (*Tyrannus verticalis)* may nest in transmission towers.

4.2 Special-Status Species

Several species known to occur at or in the regional vicinity of Study Area are protected pursuant to federal and/or State endangered species laws or have been designated as Species of Special Concern by CDFW. In addition, Section 15380(b) of the CEQA Guidelines defines rare, endangered, or threatened species that are not included in any listing; for example, vascular plants on California Native Plant Society Rare Plant Ranking (CRPR) List 1 or 2 are considered to meet Section 15380(b) requirements. Species recognized under these terms are collectively referred to as "special-status species."

A list of special-status species with potential to occur in the regional vicinity of the Project site was compiled from a nine-quad search of the California Natural Diversity Database (CDFW 2022), a nine-quad search on the California Native Plant Society's (CNPS) Rare Plant Inventory (CNPS 2022), a Project footprint search from the U.S. Fish and Wildlife Service IPaC database (USFWS 2022), and biological literature of the region for the following nine 7.5-minute USGS topographic quadrangles: Levis, Coit Ranch, Mendota Dam, Firebaugh, Tranquillity, Cantua Creek, Monocline Ridge, Lillis Ranch, and Chaney Ranch (Appendix A).

From the above list, species were assessed for potential to occur in the Study Area based on habitat requirements and distribution relative to natural communities in the vicinity. Records of special-status species occurrences within 5 miles of the Study Area were mapped by Dudek (Dudek 2022, Figure 5). Two plant species (Munz's tidytips (*Layia munzii*) and San Joaquin woollythreads (*Monolopia congdonii)* have been recorded in the Study Area, but the records are from the 1930s and 1940s (CDFW 2022) and the site has been heavily disturbed in intervening years, removing the habitat for these plants. While numerous special-status wildlife species have been recorded within 5 miles, these occurrences are in the Fresno Slough area, a CDFW preserve, or to the southwest in the Coast Range. Those species with potential to occur in the Study Area are described below.

4.2.1 Special-Status Plants

The reconnaissance-level field surveys did not identify any federal or State-listed or CRPR-ranked plant species, and no special-status plants are considered likely to occur in the Fresno County portion of the Study Area due to agricultural disturbance throughout the area. No rare plants were found during 2018 surveys in the Study Area (Dudek 2022). The wastewater treatment facility consists mainly of barren spoils (see site photos in **Appendix B**) and does not have potential to host special-status plants. A list of observed plant species from the April 2022 reconnaissance survey is presented in **Appendix C**.

4.2.2 Sensitive Natural Communities

Sensitive natural communities are communities that are of limited distribution statewide or within a county or region and are often vulnerable to environmental effects of projects, such as wetlands or riparian areas. These communities may or may not contain special-status plants or their habitat. The April 2022 reconnaissance survey did not identify any sensitive natural communities in the

Study Area. In addition, Dudek (2022) did not identify sensitive natural communities in 2019 within the Fresno County portion of the Project site.

4.2.3 Special-Status Wildlife Species

The April 2022 reconnaissance survey identified the following federal or State-listed or special-status wildlife species as having potential to occur in the Study Area. A complete species list of wildlife species recorded in the Study Area is provided in **Appendix A**. Site photographs, including bird nests, are included in **Appendix B**. Bird nest locations are also shown on Figure 2a. A red-tailed hawk nest was observed in a transmission tower on the service line, and a great horned owl nest was present in a tamarisk tree on the solar facility site. Nest locations for Swainson's hawk and loggerhead shrike are described below. Species observed during the reconnaissance survey are listed in **Appendix C**.

Swainson's Hawk (*Buteo swainsoni*)

Swainson's hawk is a State-listed threatened species. They are large migratory hawks that nest in North America and winter in Central and South America. Swainson's hawks begin arriving in California in late February and depart for their wintering grounds in early September (Woodbridge 1998). Nests are typically constructed in sturdy trees within or near agricultural lands, riparian corridors, and roadside trees. Nests are composed of a platform of sticks, bark, and fresh leaves. Swainson's hawks reside in the Central Valley from March through October, with eggs typically laid in April and early May (peaking in late April). Suitable foraging and nesting habitat for this species occurs in the Study Area.

Dudek observed two unsuccessful Swainson's hawk nests in 2018 during focused surveys (Dudek 2022). Heritage also observed one apparently unsuccessful Swainson's hawk nest attempt during protocol surveys in 2021 (Heritage 2021). During the April 2022 reconnaissance survey, ESA biologists observed a pair of Swainson's hawks constructing a nest in a willow (*Salix* sp.) approximately 1,200 feet south of the planned service line near the Tranquillity service yard (nest 2, Figure 2a), and a second Swainson's hawk nest in a tamarisk tree east of SR 33 and between Adams Avenue and South Avenue (nest 5, Figure 2a). ESA biologists also observed an inactive Swainson's hawk nest in a willow immediately northeast of the intersection of American Avenue and Ohio Avenue (nest 9, Figure 2a).

San Joaquin kit fox (*Vulpes macrotis mutica*)

San Joaquin kit fox is federally listed as endangered and State-listed as threatened. San Joaquin kit fox was federally listed as endangered in 1967 (32 Fed. Reg. 4001). They are a permanent resident of arid grasslands and open scrubland, where friable soils are present. Dens are required year-round for reproduction, shelter, temperature regulation, and protection from predators (USFWS 1998). Historically their habitat included native alkali marsh and saltbush scrub of the valley floor, but the availability of such habitats has diminished markedly due to agricultural conversion. Grasslands with friable soils are considered the principal habitat for denning, foraging, and dispersal. Kit fox's historical range has greatly diminished, primarily due to habitat

loss; their current range centers on the southern and western parts of the San Joaquin Valley (USFWS 1998). Dudek conducted focused surveys for this species in 2018; while suitable burrows were present on the fringe of agricultural fields in the Fresno County portion of the Project site and at the Mendota wastewater treatment facility, no sign of kit fox presence was found. The species would likely only occur in the Study Area in transit to areas of higher habitat value in the region (Dudek 2022). There are no CNDDB records within five miles of the Study Area (CDFW 2022).

Tricolored blackbird (*Agelaius tricolor*)

Tricolored blackbird has no federal status and is State-listed as threatened. Tricolored blackbird is a colonial species that nests in dense vegetation in and around freshwater wetlands. When nesting, tricolored blackbirds generally require freshwater wetland areas large enough to support colonies of 50 pairs or more. They prefer freshwater emergent wetlands with tall, dense cattails or tules for nesting, but will also breed in thickets of willow, blackberry, wild rose, or tall herbs; and occasionally within agricultural fields. Outside of breeding season, flocks are highly mobile and forage in grasslands, croplands, and wetlands (Zeiner et al. 1990). There is no suitable nesting habitat in the Study Area but the disturbed agricultural fields of the Project site could provide foraging habitat. The nearest record of the species is 3.1 miles northeast of the Fresno County portion of the Project site, near Fresno Slough (CDFW 2022).

Western burrowing owl (*Athene cunicularia*)

Western burrowing owl is a California Species of Special Concern. They are residents of open, dry grassland and desert. They occupy burrows for both breeding and roosting. They use burrows excavated by ground squirrels and other small mammals and will use human-made burrows and cavities. Where the number and availability of natural burrows is limited, owls may occupy human-made burrows such as drainage culverts, cavities under piles of rubble, discarded pipe, and other tunnel-like structures (Zeiner et al. 1988–1990).

Dudek conducted focused surveys for burrowing owl at the Fresno County portion of the Project site in 2018 and found no sign of owls, though suitable burrows at least 3 inches in diameter were observed and were also noted in April 2022 during the reconnaissance survey (see Figure 2a). The nearest record of the species is approximately 2.6 miles northeast of the site (CDFW 2022). At the wastewater treatment facility, surveys for a nearby project observed numerous suitable burrows, which were also seen during the reconnaissance survey (see Figure 2b), and one juvenile burrowing owl at a burrow. The occupied burrow was located approximately 4000 ft. southeast of the wastewater treatment facility in December 2019, outside of breeding season (Wood 2020).

Loggerhead shrike (*Lanius ludovicianus*)

Loggerhead shrike is a California Species of Special Concern. It is widespread in North America and is a yearlong resident of California at lower elevations, primarily in the Central Valley and Coast Range. Shrikes prefer open habitats with scattered shrubs, trees, posts or fences to provide hunting perches, and nearby spiky vegetation or barbs to use for impaling prey. ESA biologists found an active nest in tamarisk tree just east of SR 33 and between Adams Avenue and South

Avenue (nest 4, Figure 2a), and a second potentially active nest in a willow immediately northeast of the intersection of American Avenue and Ohio Avenue (nest 7, Figure 2a).

American Badger

American badger (*Taxidea taxus)* is a California Species of Special Concern. The badger is an uncommon permanent resident found throughout most of the state. It is active throughout the year, except in the North Coast. This species may be nocturnal or diurnal, and frequents drier open stages of most shrub, forest, and herbaceous habitats, and open, uncultivated ground. Badgers dig burrows in friable soil for cover and prey on burrowing rodents. They frequently reuse old burrows, although some may dig a new den each night, especially in summer. Home range estimates are often hundreds of acres but vary geographically and seasonally (Zeiner 1990). Dudek conducted focused surveys for this species in 2018; no suitable burrows or sign of badger presence was found. If present, this species would likely only occur in the Study Area in transit to areas of higher habitat value in the region (Dudek 2022). There are no CNDDB records within five miles of the Study Area (CDFW 2022).

Bat Species

Several bats that have the potential to occur in the Study Area are California Species of Special Concern. Night roosts for bats are generally associated with rock crevices, unoccupied buildings, hollows in large trees, and bridges. Western red bat (*Lasiurus blossevillii*) is a California Species of Special Concern. This species is associated strongly with riparian areas, particularly mature stands of cottonwood and sycamore, and may also be found in orchards. Western red bats roost individually in dense clumps of tree foliage in riparian areas, orchards, and suburban areas. This species ranges through the Central Valley, southern Coast Range, Salinas Valley and San Francisco Bay area (Pierson et al. 2006). Greater western mastiff bat (*Eumops perotis californicus*) is a California Species of Special Concern. They occur in many open, semi-arid to arid habitats including conifer and deciduous woodlands, coastal scrub, annual and perennial grasslands, palm oases, chaparral, desert scrub and urban (WBWG 2017). Bat roosting habitat is limited on the Project site; however, mature tamarisk and eucalyptus trees in the Fresno County portion of the Study Area may provide night roosts for tree-roosting bat species.

4.3 Wildlife Movement Corridors

Wildlife movement corridors link together areas of suitable wildlife habitat that are otherwise separated by rugged terrain, changes in vegetation, or by areas of human disturbance or urban development. Topography and other natural factors in combination with urbanization can fragment or separate large open-space areas. The fragmentation of natural habitat can create isolated “islands” of vegetation and habitat that may not provide sufficient area to accommodate sustainable populations and can adversely impact genetic and species diversity. The retention of wildlife movement corridors ameliorates the effects of such fragmentation by allowing animals to move between remaining habitats, which in turn allows depleted populations to be replenished. Such movement may also promote genetic exchange between separated populations.

The Fresno County portion of the Study Area is a large expanse of fallowed agricultural fields and disturbed lands surrounded by active roadways. There is no surface water present and limited cover for wildlife; thus, the site has limited capacity for wildlife movement. The City of Mendota portion of the Study Area is a wastewater treatment spoils pile, which primarily consists of barren ground and provides little cover or forage for wildlife movement.

4.4 Critical Habitat for Listed Plant and Wildlife Species

The USFWS defines the term critical habitat in the federal Endangered Species Act as a specific geographic area(s) that contains features essential for the conservation of a threatened or endangered species and that may require special management and protection. The Study Area is not within designated or proposed critical habitat for any species.

Appendix A
Special-Status Species Recorded Near the Study Area

TABLE A-1
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE STUDY AREA

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Plants			
Atriplex cordulata var. *cordulata* heartscale	--/--/1B.2	Chenopod scrub, meadows and seeps, valley and foothill grassland (sandy); saline or alkaline. Annual herb. Blooms Apr–Oct. Elevation 0–1837 m.	**Not Present.** Suitable scrub, meadow or alkali playa habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex coronata var. *vallicola* Lost Hills crownscale	--/--/1B.2	Chenopod scrub, valley and foothill grassland, vernal pools; alkaline. Annual herb. Blooms Apr–Aug. Elevation 164–2083 m.	**Not Present.** Suitable scrub, grassland, alkali sink or vernal pool habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex depressa brittlescale	--/--/1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pools; alkaline, clay. Annual herb. Blooms Apr–Oct. Elevation 3–1050 m.	**Not Present.** Suitable scrub, playa, alkaline sink or vernal pool habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex minuscula lesser saltscale	--/--/1B.1	Chenopod scrub, playas, valley and foothill grassland; alkaline, sandy. Annual herb. May–Oct. Elevation 49–656 m.	**Not Present.** Suitable scrub, playa or grassland habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex subtilis *subtle orache*	--/--/1B.2	Valley and foothill grassland; alkaline. Annual herb. Blooms June, Aug, Sep(Oct). Elevation 130–330 m.	**Not Present.** The Project site lacks suitable valley and foothill grassland habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Chloropyron palmatum palmate-bracted bird's-beak	FE/CE/1B.1	Chenopod scrub, valley and foothill grassland; alkaline. Annual herb (hemiparasitic). Blooms May–Oct. Elevation 16–509 m.	**Not Present.** Suitable scrub, alkali playa or grassland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Deinandra halliana Hall's tarplant	--/--/1B.2	Clay, sometimes alkaline; chenopod scrub; cismontane woodland; valley and foothill grassland. Annual herb. Blooms Apr-May. Elevation 260-950 m.	**Not Present.** Suitable scrub, alkaline clay, or grassland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Delphinium recurvatum recurved larkspur	--/--/1B.2	Chenopod scrub, meadows and seeps, playa, valley and foothill grassland; alkaline. Perennial herb. Blooms Mar–June. Elevation 10–2592 m.	**Not Present.** Suitable scrub, woodland, alkali playa or grassland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Lasthenia chrysantha alkali-sink goldfields	--/--/1B.1	Valley grassland, alkali sink, wetland-riparian. Annual herb. Blooms Feb-June.	**Not Present.** Suitable alkali sink, grassland or wetland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Layia munzii Munz's tidy-tips	--/--/1B.2	Chenopod scrub, valley and foothill grassland (alkaline clay). Annual herb. Blooms Mar–Apr. Elevation 492–2297 m.	**Unlikely.** Suitable scrub, alkali playa or grassland habitat is not present on-site. Historical 1940 occurrence east of the Project site (CDFW 2021); location is imprecise and area is now cultivated.

TABLE A-1 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE STUDY AREA

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Plants (cont.)			
Lepidium jaredii ssp. *album* Panoche peppergrass	--/--/1B.2	Valley and foothill grassland (steep slopes, clay). Annual herb. Blooms Feb– June. Elevation 607–902 m.	**Not Present.** Suitable grassland habitat is not present on-site and the site is outside of the species' known elevation range. The nearest CNDDB occurrence is approximately 4.8 miles west of the Project site (CDFW 2021).
Madia radiata Showy golden madia	--/--/1B.1	Cismontane woodland, valley and foothill grassland. Annual herb. Blooms March – May. Elevation 80 – 3985 m.	**Not Present.** Suitable grassland or woodland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Monolopia congdonii San Joaquin woollythreads	FE/--/1B.2	Chenopod scrub, valley and foothill grassland (sandy). Annual herb. Blooms Feb–May. Elevation 197–2625 m.	**Unlikely.** Project site lacks suitable scrub or sandy grassland habitat. An occurrence in the northern part of the site from 1935 is likely extirpated as a result of cultivation (CDFW 2021).
Navarretia panochensis Panoche navarretia	--/--/1B.3	Valley and foothill grassland chenopod scrub (clay), often gravelly. Annual herb. Blooms Apr-Aug. Elevation 330 - 860 m.	**Not Present.** Project site lacks suitable clay, grassland or woodland habitat. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Sagittaria sanfordii Sanford's arrowhead	--/--/1B.2	Marshes and swamps (assorted shallow freshwater). Perennial rhizomatous herb. Blooms May–Oct (Nov). Elevation 0–2133 m.	**Not Present.** Project site lacks marsh and swamp habitat, though species could occur in ditches. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Senecio aphanactis Chaparral ragwort	--/--/2B.2	Chaparral, cismontane woodland, coastal scrub, sometimes alkaline. Annual herb. Blooms Jan – April (May). Elevation 45 – 2625 m.	**Not Present.** Project site lacks marsh and swamp habitat, though species could occur in ditches. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Invertebrates			
Branchinecta longiantenna longhorn fairy shrimp	FE/--	Sandstone outcrop pools, alkaline grassland vernal pools, and pools within alkali sink and alkali scrub communities.	**Not Present.** Species limited to four known sites; Project site lacks vernal pools. Nearest CNDDB occurrence approximately 0.7-mile east of the site (CDFW 2021).
Branchinecta lynchi vernal pool fairy shrimp	FT/--	Vernal pools, seasonally ponded areas within vernal swales, and ephemeral freshwater habitats.	**Not Present.** Suitable vernal pool habitat is not present on the Project site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Reptiles and Amphibians			
Anniella pulchra Northern California legless lizard	--/SSC	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and sandy or loose, loamy soils.	**Unlikely.** The Project site lacks shrubs for cover, and sandy/loose soils. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Arizona elegans occidentialis California glossy snake	--/SSC	Scrub, rocky washes, grasslands, chaparral, in open areas with soil loose enough for burrowing.	**Unlikely.** The Project site lacks scrub, washes and sandy/loose soils. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).

TABLE A-1 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE STUDY AREA

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Reptiles and Amphibians (cont.)			
Emys marmorata *western pond turtle*	--/SSC	Rivers, creeks, small lakes, ponds, marshes, irrigation ditches and reservoirs. Turtles bask on land near water on logs, branches or boulders.	**Not Present.** The Project site lacks suitable aquatic habitat required for this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Gambelia sila blunt-nosed leopard lizard	FE/SE, FP	Sparsely vegetated alkali and desert scrubs, including semi-arid grasslands, alkali flats, and washes.	**Unlikely.** The Project site consists of disturbed agricultural areas surrounded by orchards. The closest occurrence is approximately 4 miles southwest of the Project site (CDFW 2021).
Masticophis flagellum ruddocki San Joaquin whipsnake	--/SSC	Open, dry, treeless areas including grassland and saltbush scrub. This species needs mammal burrows for refuge.	**Unlikely.** The Project site is highly disturbed agricultural areas. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Phrynosoma blainvillii coast horned lizard	--/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats.	**Unlikely.** The Project site lacks suitable loose, sandy soils and shrub cover required for this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Spea hammondii western spadefoot	--/SSC	Primarily grassland and vernal pools, but also ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agricultural fields.	**Unlikely.** The Project site lacks suitable aquatic habitat for this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Thamnophis gigas giant garter snake	FT/ST	Highly aquatic: found in freshwater marsh habitat and low-gradient streams; also uses canals and irrigation ditches.	**Not Present.** The Project site lacks aquatic habitat required by this species. The nearest CNDDB occurrence is approximately 4 miles northeast in the Fresno Slough area (CDFW 2021).
Thamnophis hammondii two-striped gartersnake	--/SSC	Highly aquatic: found in streams, creeks, pools, streams with rocky beds, ponds, lakes, and vernal pools.	**Not Present.** The Project site lacks aquatic habitat required by this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Birds			
Agelaius tricolor tricolored blackbird	--/Candidate Endangered	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture.	**Unlikely.** The Project site lacks suitable marsh nesting habitat, but it provides foraging areas within cultivated agricultural lands for nearby nesting or wintering habitat. Known to nest approximately 3 miles northeast of the Project site (CDFW 2021). Additional suitable habitat present in the Mendota Wildlife Area.
Asio flammeus short-eared owl	--/SSC	Grassland, prairies, dunes, meadows, irrigated lands, and saline and freshwater emergent wetlands. Nests on ground in salt or freshwater marshes, irrigated grain or alfalfa fields, ungrazed grasslands, and old pastures.	**Unlikely.** The Project site has marginal ground vegetation and herbaceous cover for nesting in the tree groves, but these areas are small and surrounded by disturbed land. Suitable foraging habitat is present in agricultural fields within the Project site. No occurrences within 5 miles of the Project site (CDFW 2021).

TABLE A-1 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE STUDY AREA

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Birds (cont.)			
Athene cunicularia burrowing owl	--/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows. This species requires short vegetation with sparse shrubs and burrows for roosting and nesting.	**Moderate Potential.** Suitable ground squirrel burrows observed on the WWTP site, and species has been observed <1 mile away. Few suitable burrows on Heartland site, none of gen-tie line. The nearest CNDDB occurrence is approximately 2.6 miles northeast of the Project site (CDFW 2021).
Buteo swainsoni Swainson's hawk	--/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture.	**Present.** Active nests present onsite in tamarisk trees near SR-33, and willow trees near gen-tie line. Suitable foraging habitat occurs on the Project site. Additional inactive nests were found within a 5-mile radius of the site (Dudek, 2022). Closest CNDDB 4.7 miles northwest (CDFW, 2021).
Charadrius montanus mountain plover	--/SSC	Winters in shortgrass prairies, plowed fields, open sagebrush, and sandy deserts. Does not breed in California.	**Unlikely.** Although this species prefers prairie habitats, grazed grasslands, or burned fields, they may forage on tilled fields in winter. The nearest CNDDB occurrence is approximately 2.8 miles east (CDFW 2021).
Coccyzus americanus occidentalis Western yellow-billed cuckoo	FT/SE	Nests in dense riparian woodlands and forest with well-developed understories.	**Not Present.** Suitable nesting and foraging habitat is absent from the Project site. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Lanius ludovicianus loggerhead shrike	--/SSC	Nests and forages in open habitats with scattered shrubs, trees, or other perches.	**Present.** This species was observed perched in tamarisk trees and on fencelines on the Heartland site and the gen-tie line, and two active nests were identified (Figure 2a).
Riparia riparia *Bank swallow*	--/ST	Nests in riparian, lakeside, and coastal areas with vertical banks, bluffs, and cliffs with sandy soils; crosses open country with water during migration.	**Unlikely.** The Project site lacks vertical sandy bank habitat for nesting but the species may forage here. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Mammals			
Ammospermophilus nelsoni Nelson's antelope squirrel	--/ST	Arid annual grassland or shrubland with rolling hills or sandy washes, with or without shrubs including saltbush *(Atriplex spp.)*. Prefers fine-textured soils.	**Unlikely.** Regular disking of soils at the Project site renders the site unsuitable as habitat. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Dipodomys ingens giant kangaroo rat	FE/SE	Fine sandy loam soils with sparse forb vegetation and low-density alkali desert scrub.	**Unlikely.** The Project site lacks the required open desert with scattered shrubs or sandy loam soils. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Dipodomys nitratoides exilis Fresno kangaroo rat	FE/SE	Alkali sink/open grassland habitats; sands and saline sandy soils in chenopod scrub.	**Unlikely.** Regular disking of soils at the Project site renders the site unsuitable as habitat. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).

TABLE A-1 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE STUDY AREA

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Mammals (cont.)			
Eumops perotis californicus western mastiff bat	--/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; Suitable habitat consists of extensive open areas with abundant roost locations provided by crevices in rock outcrops, trees, tunnels, and buildings.	**Unlikely.** No suitable crevices or caves for roosting. The Project site provides suitable foraging habitat over agricultural fields; however there are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Lasiurus blossevillii western red bat	--/SSC	Roosts in tree canopy in forests, woodlands, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange.	**Moderate Potential.** Small clumps of trees may be used for roosting, and species may forage in area. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Onychomys torridus tularensis Tulare grasshopper mouse	--/SSC	Low, open scrub, and semi-scrub habitats in arid semi-desert associations.	**Unlikely.** The Project site lacks scrubland typically associated with this species. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Taxidea taxus American badger	--/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils to dig burrows. Prefers open, uncultivated ground and preys on burrowing rodents.	**Moderate Potential (transit).** Badgers burrow in open areas, including ranchlands and agricultural fields; however, the Project site is disturbed and surrounded by other agricultural sites. Badgers may pass through occasionally while foraging. There are no CNDDB occurrences within 5 miles of the Project site (CDFW 2021).
Vulpes macrotis mutica San Joaquin kit fox	FE/ST	Grasslands and scrublands, including disturbed areas; oak woodland, alkali sink scrubland, vernal pools, and alkali meadows.	**Moderate Potential (transit).** The Project site provides suitable foraging habitat, and the species may disperse through the Project site during migration between habitat areas. No suitable burrows were observed during biological surveys. The nearest CNDDB record is approximately 5 miles southwest of the Project site (CDFW 2021).

E2 Swainson's Hawk Survey Report

Swainson's Hawk Survey Report 2021

Heartland Hydrogen Project

Prepared for:

Irish Hills Environmental, Inc.

Prepared by:

Heritage Environmental Consultants, LLC

August 2021

Project Description

The Heartland Hydrogen Project ("Project") would consist of the construction, operation and eventual decommissioning of a solar photovoltaic (PV) power generating facility ("Heartland Solar Facility" or "Solar Facility") and an accessory use electrolytic hydrogen production facility ("Heartland Hydrogen Facility" or "Hydrogen Facility") proposed by Heartland Solar 1, LLC, applicant for the Solar Facility and Plug Project Holding Co., LLC, applicant for the Hydrogen Facility (jointly the "Applicants"). The Solar Facility will occupy approximately 2288 acres and will include a high-voltage electrical service line to interconnect the Solar Facility with Pacific Gas and Electric's ("PG&E") Tranquility Switching Station, located approximately 1.25 miles south of the Project. The Hydrogen Facility will occupy approximately 30 acres. The combined Solar Facility and Hydrogen Facility would be capable of producing approximately 30,000 kg/day of renewable hydrogen for zero-emission transportation fuel. This fuel will be used by zero-emission on-road and off-road fuel-cell electric vehicles operating throughout California. The Project would be located in western Fresno County on poor-quality agricultural lands presently owned by the Westlands Water District ("Westlands" or "WWD").

The Project site is zoned AE-20 (Exclusive Agricultural District, 20-acre minimum parcel size). Surrounding land uses include agriculture, scattered single family residences and other vacant land owned by WWD. The Project would be adjacent to the existing Adams East Solar Project and approximately 1.5 miles north of the existing Tranquility Solar Project. Three other utility-scale solar energy projects are proposed for lands nearby or bordering the Project.

The Project site is under purchase options between the Applicants and the present owner, Westlands Water District, which acquired the properties through legal settlements related to agricultural irrigation and drainage. As a consequence of those acquisitions, irrigation has been prohibited on the lands, which have been intermittently dry-farmed or lain fallow in recent years. The combination of relatively low quality soil, lack of irrigation and drainage facilities, and poor habitat value have led the site to be identified by the Center for Law, Energy & the Environment as "Least Conflict" and "Priority Least-Conflict" areas for solar PV development[1]. The Project is being proposed with a number of design elements, such as wildlife-friendly fencing, to further reduce the potential for adverse impacts on wildlife resources.

The Hydrogen Facility will use recycled waste water, delivered by truck from the nearby City of Mendota, as the source water for the electrolysis process and potentially other uses, such as closed-cycle cooling. As part of the Project, upgrades will be made to the Mendota Wastewater Treatment Plant (MWTP) enabling it to perform tertiary water treatment and produce water that can be used at the Hydrogen Facility and other allowable recycled water uses. The upgraded WWTP will be constructed adjacent to the existing WWTP headworks, approximately 1.25 miles northeast of the city center.

The hydrogen will be produced by an electrolysis process where electricity is used to split water into its constituent elements hydrogen and oxygen. The hydrogen is dried to remove residual water vapor

[1] Center for Law, Energy & the Environment, *A Path Forward: Identifying Least-Conflict Solar PV Development in California's San Joaquin Valley* (May 2016), available at https://www.law.berkeley.edu/wp-content/uploads/2016/05/A-PATH-FORWARD-May-2016.pdf

and then cooled and compressed to transform it into a liquid. The liquid hydrogen is piped to short term storage tanks prior to being loaded into mobile tanker-trailers for distribution to customers. The Hydrogen Facility will operate 24 hours per day.

The Solar Facility will consist of arrays of solar PV modules to convert sunlight into direct current (DC) electrical power. Electrical power from groups of modules is combined at an inverter where the power is converted to alternating current (AC) power and transformed to higher voltage for economical transmission to the Solar Facility substation. The power collected at the substation is further stepped up to high voltage (230 kV) for transmission and interconnection at PG&E's Tranquility Switching Station. An additional 230 kV line will electrically interconnect the Solar Facility substation with the Hydrogen Facility substation. The Solar Facility will also include an Operations and Maintenance (O&M) area for staff parking, equipment storage, and Facility operation control.

The Solar Facility will be large enough to generate all the electricity needed by the Hydrogen Facility. However, since the Hydrogen Facility will operate continuously, including nighttime hours when no solar energy is generated, it will interconnect with PG&E as part of PG&E's Net Energy Metering program. This allows the Project to send excess solar energy to the electric grid during the day and draw energy from the grid at night, or other times of low solar generation, to power the Hydrogen Facility. This net metering arrangement requires that the Hydrogen and Solar Facilities both be located within the joint Project boundary.

Swainson's Hawk Regulatory Background

The Swainson's Hawk (*Buteo swainsoni*) is listed as a California state threatened species under the California Endangered Species Act (CESA) and managed by the California Department of Fish and Wildlife (CDFW). The species is not listed as threatened or endangered under the federal Endangered Species Act. To comply with state wildlife protection requirements and receive project approvals, renewable energy projects may be required to conduct surveys and avoid or minimize impacts to Swainson's Hawks and related nesting and foraging habitat. CESA regulates the taking of state-listed species. "Take" is defined as to "hunt, pursue, catch, capture, or kill, or to attempt to hunt, pursue, catch, capture, or kill." (Fish and Game Code §86).

Renewable energy project development could cause direct, indirect, individual, and cumulative adverse impacts to Swainson's Hawks when facility construction and operation areas (such as wind turbines, power plants, solar panels and tower sites, access roads, staging areas, and pulling/splicing locations) occur in areas where hawks are present. Potential impacts include loss of foraging habitat and disruption of breeding activities due to increased dust, noise, and human presence. Direct mortality from vehicle strikes is also known to occur. Construction disturbance during the breeding season and habitat loss could cause incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment (CDFG 2010).

Swainson's Hawk Survey Methods

The survey was conducted using survey methods recommended by the Swainson's Hawk Technical Advisory Committee (May 31, 2000). To meet the minimum level of protection for the species, surveys should be completed for at least the two survey periods immediately prior to a projects initiation. The survey protocol includes five survey/monitoring periods as follows:

1. Period I - January-March – one survey (optional)
2. Period II - March 20-April 5 – three surveys
3. Period III - April 5-April 20 – three surveys
4. Period IV - April 21-June 10 – monitoring known nest sites
5. Period V - June 10-July 30 – monitoring fledglings

To reduce disturbance to Swainson's Hawk (SWHA) in the area, a vehicle was used as a blind while conducting the survey. The survey was conducted by driving existing roads and two-tracks throughout the project area. The survey effort concentrated on suitable nesting and roosting habitat such as trees and utility poles. All nest locations were marked with a GPS and representative photos were taken. The survey included all raptor species including Burrowing Owl. The survey included the project area plus a 0.5 mile buffer as recommended by the survey protocol. As recommended by the survey methodology, survey timing was planned to best capture migration, courtship, and nesting periods. Because surveys began late, none were conducted during Periods I or II. However, because SWHA activity increases around nest sites during Period III, they are typically detected very easily. In addition, the protocol recommends that surveys be conducted during a minimum of two of the five survey periods. Surveys were conducted during the following three periods:

1. Period III – three surveys from April 15-19, 2021
2. Period IV - June 1-2, 2021 – monitoring known nests
3. Period V - June 28-29, 2021 – monitoring fledglings

Survey Results

Habitat Assessment

The Mendota WWTP portion of the project (**Figure 1**) is located adjacent to the town of Mendota in an industrial area next to water treatment and other water management facilities (Representative Photo Point 533). Access to this area is extremely limited due to security fencing, irrigation ditches, and gated roadways and could only be observed from a distance. Riparian habitat exists along the San Joaquin River and along waterways associated with water management facilities. Tree species include; cottonwood, pine, eucalyptus, palm, and tamarisk. Limited wetland habitats occur along these riparian corridors and include bulrushes, sedges, and other aquatic plant species. The Mendota Pool Park, a picnic and fishing area, is also located near the river and north of the proposed project facilities. All lands immediately adjacent to the river are agricultural lands dominated by row crops and orchards (nut and fruit trees). The proposed Mendota WWTP site provides little to no suitable habitat for wildlife species due to heavy human-related impacts (Representative Photo Point 534). There was no evidence of burrowing mammals such as California ground squirrel or kit fox observed in the area. Suitable nesting habitat for various raptors and other avian species does exist in the area, mainly in the riparian corridor found along the San Joaquin River, though the nearest such habitat is 0.5 miles from the site of the WWTP. No raptor nests were observed within 0.5 miles of the proposed site.

The solar site portion of the project (**Figure 2**) is located approximately five miles south of the town of Mendota. The proposed project area and surrounding lands are dominated by agricultural fields which include row crops and orchards (nut and fruit trees). These lands provide suitable foraging habitat for raptors, but low quality habitat for other wildlife species due to the frequency of ground disturbing activities and other human disturbance. All of the agriculture lands within the project area showed signs of recent farming activities just as freshly turned soil or appeared to be recently

fallowed. County roads and two tracks bisect the project area, and irrigation ditches are present. Groves of trees are sparse and generally located along the roadways and irrigation ditches. Tree species include eucalyptus, tamarisk, cottonwood, and pine. The survey effort concentrated on these groves which provide suitable nesting habitat for raptors and other avian species in the area.

Suitable burrow habitat for Burrowing Owl (BUOW) is limited to a few irrigation ditches and mounded soil found on the site. Burrowing mammals such as California ground squirrel were observed during the survey. In the Central Valley, California ground squirrel often provide nesting habitat for BUOW (CDFG 2012). These areas were investigated thoroughly, and no Burrowing Owl or active sign such as white wash, pellets, prey remains, and feathers were observed.

Raptor Species Observed and Nesting Activity

Five common raptor species were observed during the surveys: Swainson's Hawk (*Buteo swainsoni*), Red-tailed Hawk (*Buteo jamaicensis*), Cooper's Hawk (*Accipiter cooperii*), American Kestrel (*Falco sparverius*), and Great Horned Owl (*Bubo virginianus*). Activities included soaring, perching, hunting, mating behavior and nest tending. Four active raptor nests were observed during the first survey conducted in April 2021 and were revisited during the follow-up visits to check status and activity. **Figure 2** shows nest locations observed during the survey effort. Representative photographs of the nests and associated habitat were taken of the project area and can be found at the end of this report. Nest status with corresponding waypoints (WP) are as follows:

- WP530 – Swainson's Hawk
    1. April 15-19, 2021: 2 adults tending nest
    2. June 1-2, 2021: 2 adults tending nest. 1 adult sitting on nest
    3. June 28-29, 2021: No activity. Nest appears abandoned
- WP528 – Red-tailed Hawk
    1. April 15-19, 2021: 2 adults tending nest
    2. June 1-2, 2021: 2 adults tending nest. 1 chick in nest
    3. June 28-29, 2021: 1 adult tending nest. 1 chick in nest
- WP527 – Great Horned Owl
    1. April 15-19, 2021: 2 adults tending nest. 1 chick in nest
    2. June 1-2, 2021: Nest Inactive. Assume chick has fledged
    3. June 28-29, 2021: Nest Inactive
- WP529 – Red-tailed Hawk
    1. April 15-19, 2021: 2 adults tending nest
    2. June 1-2, 2021: Nest Inactive
    3. June 28-29, 2021: Nest Inactive. Assumed abandoned

Recommendations

At this time, the survey requirements for Swainson's Hawk have been met for the year 2021. If the project continues into 2022, additional surveys may be required, as each calendar year is treated as a new biological survey period. No Burrowing Owl were observed during the surveys and suitable habitat is limited for the species within the proposed project area. Pre-construction protocol level surveys for Burrowing Owl should be conducted.

1 Introduction

Dudek has prepared this Biological Resources Report in support of the proposed Heartland Hydrogen Project (Project), a solar photovoltaic (PV) power generating facility ("Heartland Solar Facility" or "Solar Facility") and an accessory-use electrolytic hydrogen production facility ("Heartland Hydrogen Facility" or "Hydrogen Facility") located in Fresno County, California. This report describes the methodology for, and results of, various field surveys conducted to date, describes site conditions and provides an assessment of sensitive biological resources, including special-status species, with potential to occur on and in the vicinity of the Project site. This report is intended to support Project planning and siting/design efforts, as well as future environmental review under the California Environmental Quality Act and regulatory review/permitting by the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), U.S. Army Corps of Engineers (USACE), and Regional Water Quality Control Board (RWQCB), as appropriate.

Since the time of these surveys, the design of the Project has evolved, resulting in minor changes to the areas potentially impacted by the Project. This report reflects the findings of surveys as performed under a prior Project design. However, the findings are presented in the context of the most recent Project design.

INTENTIONALLY LEFT BLANK

2 Project Location

2.1 Project Description

The Heartland Hydrogen Project ("Project") would consist of the construction, operation and eventual decommissioning of a solar photovoltaic (PV) power generating facility ("Heartland Solar Facility" or "Solar Facility") and an accessory use electrolytic hydrogen production facility ("Heartland Hydrogen Facility" or "Hydrogen Facility") proposed by Heartland Solar 1, LLC, applicant for the Solar Facility and Plug Project Holding Co., LLC, applicant for the Hydrogen Facility (jointly the "Applicants"). The Solar Facility will occupy approximately 2288 acres and will include a high-voltage electrical service line to interconnect the Solar Facility with Pacific Gas and Electric's ("PG&E") Tranquility Switching Station, located approximately 1.25 miles south of the Project. The Hydrogen Facility will occupy approximately 30 acres. The combined Solar Facility and Hydrogen Facility would be capable of producing approximately 30,000 kg/day of renewable hydrogen for zero-emission transportation fuel. This fuel will be used by zero-emission on-road and off-road fuel-cell electric vehicles operating throughout California. The Project would be located in western Fresno County on poor-quality agricultural lands presently owned by the Westlands Water District ("Westlands" or "WWD").

The Project site is zoned AE-20 (Exclusive Agricultural District, 20-acre minimum parcel size). Surrounding land uses include agriculture, scattered single family residences and other vacant land owned by WWD. The Project would be adjacent to the existing Adams East Solar Project and approximately 1.5 miles north of the existing Tranquility Solar Project. Three other utility-scale solar energy projects are proposed for lands nearby or bordering the Project.

The Project site is under purchase options between the Applicants and the present owner, Westlands Water District, which acquired the properties through legal settlements related to agricultural irrigation and drainage. As a consequence of those acquisitions, irrigation has been prohibited on the lands, which have been intermittently dry-farmed or lain fallow in recent years. The combination of relatively low quality soil, lack of irrigation and drainage facilities, and poor habitat value have led the site to be identified by the Center for Law, Energy & the Environment as "Least Conflict" and "Priority Least-Conflict" areas for solar PV development . The Project is being proposed with a number of design elements, such as wildlife-friendly fencing, to further reduce the potential for adverse impacts on wildlife resources.

The Hydrogen Facility will use recycled waste water, delivered by truck from the nearby City of Mendota, as the source water for the electrolysis process and potentially other uses, such as closed-cycle cooling. As part of the Project, upgrades will be made to the Mendota Wastewater Treatment Plant (MWTP) enabling it to perform tertiary water treatment and produce water that can be used at the Hydrogen Facility and other allowable recycled water uses. The upgraded WWTP will be constructed adjacent to the existing WWTP headworks, approximately 1.25 miles northeast of the city center.

The hydrogen will be produced by an electrolysis process where electricity is used to split water into its constituent elements hydrogen and oxygen. The hydrogen is dried to remove residual water vapor and then cooled and compressed to transform it into a liquid. The liquid hydrogen is piped to short term storage tanks prior to being loaded into mobile tanker-trailers for distribution to customers. The Hydrogen Facility will operate 24 hours per day.

The Solar Facility will consist of arrays of solar PV modules to convert sunlight into direct current (DC) electrical power. Electrical power from groups of modules is combined at an inverter where the power is converted to

alternating current (AC) power and transformed to higher voltage for economical transmission to the Solar Facility substation. The power collected at the substation is further stepped up to high voltage (230 kV) for transmission and interconnection at PG&E's Tranquility Switching Station. An additional 230 kV line will electrically interconnect the Solar Facility substation with the Hydrogen Facility substation. The Solar Facility will also include an Operations and Maintenance (O&M) area for staff parking, equipment storage, and Facility operation control.

The Solar Facility will be large enough to generate all the electricity needed by the Hydrogen Facility. However, since the Hydrogen Facility will operate continuously, including nighttime hours when no solar energy is generated, it will interconnect with PG&E as part of PG&E's Net Energy Metering program. This allows the Project to send excess solar energy to the electric grid during the day and draw energy from the grid at night, or other times of low solar generation, to power the Hydrogen Facility. This net metering arrangement requires that the Hydrogen and Solar Facilities both be located within the joint Project boundary.

2.2 Project Location

The Project site is located in the San Joaquin Valley, approximately 6.5 miles south of the City of Mendota, and immediately west of State Route 33 (SR-33), in unincorporated Fresno County. Specifically, the Project site is bounded by West American Avenue to the north and SR-33 to the east. The Project borders Los Angeles Avenue on the west and is one-half mile north of Manning Avenue to the south. The project site is located within Sections 1, 2, 12, 13, 23, and 24 of Township 15 South, Range 14 East of the Coit Ranch USGS 7.5 minute quadrangle (Figure 1).

3 Biological Setting

3.1 Climate

The climate of the Project area is typical of inland valleys in California, with hot dry summers and cool, mild winters. Daytime temperatures in the summer often exceed 100 degrees Fahrenheit (°F), with lows in the 60s °F. In winter, daytime high temperatures are usually in the 50s °F, with lows around 35 °F. Radiation (Tule) fog is common in the winter, and may persist for extended periods.

3.2 Soils

A review of Natural Resources Conservation Service (NRCS) data resulted in the identification of six soil types mapped on the Project site: Tranquility clay loam, saline-sodic, wet, 0 to 1% slopes; Ciervo clay, saline-sodic, wet, 0 to 1%slopes; Ciervo, wet-Ciervo complex, saline-sodic 0 to 1% slopes; Posochanet clay loam, saline-sodic, wet, 0 to 1% slopes; Cerini sandy loam, 0 to 2% slopes and Calflax clay loam, saline-sodic, wet, 0 to 1% slopes (USDA 2018b) (Figure 2). Soils descriptions are provided in Appendix A.

3.3 Topography

The Project site consists of flat terrain that slopes gradually from southwest to northeast. Elevations on the Project site range from approximately 185 feet Above Mean Sea Level (AMSL) to approximately 195 feet AMSL.

3.4 Land Uses

The Project site is located near the western edge of the San Joaquin Valley where it transitions to the central California Coast Ranges. Land use in the Project area is primarily agricultural and is periodically dry farmed with winter and spring wheat (USDA NASS 2019) or other grain crops. In years when the land lays fallow, the land is regularly cultivated for weed control. The nearest areas supporting natural habitats include the Mendota Wildlife Area and Fresno Slough 2.3 miles northeast and open rangelands associated with the interior Coast Range approximately 6.7 miles southwest. At the time of the site surveys, the Project site was recently under agricultural production with winter wheat. In addition, a database review of the U.S. Department of Agriculture (USDA) National Agricultural Statistics Service (NASS) CropScape website from 2008 to 2018 showed the Project site was under agricultural production for this entire period (USDA NASS 2019).

3.5 Hydrologic Features

The Project site falls within the Huron hydrologic subarea (HSA) of the Westlands hydrologic area (HA) located within the South Valley Floor hydrologic unit (HU) in the Tulare Lake Basin. Surface flow generated from the Project site is from the southwest to northeast based on existing topography, which is very gently sloping. The site does not support any indicators of concentrated flows; instead, flows are expected to sheet over a relatively wide area and temporarily collect in low-lying areas or roadside ditches. Flows are only expected to exit the site during exceptional rainfall events producing significant rainfall over a short time period. Such flows are anticipated to exit the Project site via culverts under SR-33 and continue east toward Fresno Slough and the Mendota Wildlife Area.

INTENTIONALLY LEFT BLANK

4 Methods

Dudek conducted a literature review and subsequent focused biological surveys to determine the presence or absence of sensitive biological resources on and immediately adjacent to the Project site. The methods employed for the literature review and methods of field surveys are described below.

4.1 Literature Review

Prior to conducting fieldwork, Dudek reviewed the following literature and database sources to assess the potential for special-status biological resources, including aquatic resources, to occur on the Project site and immediate vicinity:

- California Natural Diversity Database (CNDDB; CDFW 2019);
- U.S. Fish and Wildlife Service Information for Planning and Conservation (IPaC) Trust Resources Report (USFWS 2019a);
- Review of California Native Plant Society (CNPS) *Inventory of Rare and Endangered Plants* (CNPS 2019b);
- Calflora: Information about California Plants for Education, Research and Conservation (Calflora 2019);
- U.S. Geological Survey (USGS) National Hydrography Dataset (NHD; USGS 2019);
- USFWS National Wetlands Inventory (NWI; USFWS 2019b); and
- U.S. Department of Agriculture, Natural Resources Conservation Service Web Soil Survey (USDA-NRCS 2019).

4.2 Field Surveys

Dudek conducted an initial biological resources habitat suitability evaluation to document and characterize existing natural resources on the site and to determine the potential for special-status plant and wildlife species, as well as other sensitive communities, such as wetlands, to occur on the site. Based on the results of this initial assessment, priority survey areas were identified as areas to be targeted for further investigation (Figure 3). The priority survey areas are those that were not under agricultural production at the time of the surveys. These areas, therefore, were considered to have the potential to support burrowing mammals such as burrowing owl (*Athene cunicularia*), San Joaquin kit fox (*Vulpes macrotis mutica*), and/or special-status plants. Trees occurring on site that have the potential to support nesting Swainson's hawks also occurred in these areas. Dudek biologists conducted various focused field surveys for target special-status plant and wildlife species determined as potentially occurring within these priority survey areas; however, the entire project site was evaluated during each survey for potential occurrence of target species. A formal delineation of aquatic resources was also conducted. During all focused surveys, biologists collected information on common plants and wildlife observed on the Project site. The methodologies for each of the field assessments and surveys conducted on the site are discussed in more detail below.

4.2.1 Vegetation Community and Land Cover Mapping

Dudek characterized, documented, and mapped vegetation communities and other land covers on the Project site in July 2018. Vegetation mapping was conducted consistent with *Vegetation Alliances and Associations: California Natural Community List Arranged Alphabetically by Life Form* (California Natural Community List; CDFW 2018b) based on the *Manual of California Vegetation*, Second Edition (Sawyer et al. 2009). These classification systems

focus on a quantified, hierarchical approach that includes both floristic (plant species) and physiognomic (community structure and form) factors as currently observed (as opposed to predicting climax or successional stages). Vegetation communities were classified based on site factors, descriptions, distribution, and characteristic species present. Where the vegetation communities or land covers observed in the field did not match those described in Sawyer et al. (2009), Dudek generated additional site-specific vegetation community or land cover classifications, where necessary.

Dudek conducted vegetation mapping partly by walking the site and partly via windshield surveys, to provide 100 percent coverage. Following completion of the fieldwork, Dudek geographic information system (GIS) analysts digitized the vegetation boundaries as delineated by the field biologists and created GIS coverage for the vegetation communities identified.

During this site visit, Dudek biologists also identified aquatic resources, including wetlands, potentially subject to regulation under the federal Clean Water Act, the California Porter-Cologne Water Quality Control Act and/or California Fish and Game Code. Habitats present on the Project site were also evaluated for their potential to support special-status plant and wildlife species known to occur in the region. Focused surveys that were subsequently conducted for these resources are discussed further below.

4.2.2 Special-Status Species and Other Sensitive Biological Resources

Special-status biological resources are those defined as follows: (1) species that have been given special recognition by local, state, or federal resource agencies and/or recognized environmental organizations due to limited, declining, or threatened population sizes; (2) species and habitat types recognized by local and regional resource agencies as sensitive; (3) habitat areas or vegetation communities that are unique, are of relatively limited distribution, or are of particular value to wildlife; (4) documented wildlife corridors and habitat linkages; and (5) aquatic resources regulated by the USACE, RWQCB, and/or CDFW.

For the purposes of this report, special-status plant species are those plants listed, proposed for listing, or candidates for listing as threatened or endangered by the USFWS under the federal Endangered Species Act (ESA); those listed or proposed for listing as rare, threatened, or endangered by CDFW under the California Endangered Species Act (CESA); and plants that are identified by California Rare Plant Rank (CRPR) 1 or 2 in CNPS's Online Inventory of Rare and Endangered Plants (CNPS 2019b).

Special-status wildlife species are those that are designated as rare, threatened, or endangered (or candidate) by CDFW or the USFWS and are protected under either the state CESA (Fish & Game Code, § 2050 et seq.) or federal ESA (16 U.S.C. § 1531 et seq.), those that meet the CEQA definition of endangered, rare, or threatened (Cal. Code Regs., tit. 14, § 15380(b),(d)), or are considered Fully Protected (FP) under Fish & Game Code, § 3511, 4700, 5050, and 5515. Special-status wildlife species also include those that are of expressed concern to resource/regulatory agencies or local jurisdictions. This includes wildlife on CDFW's *Special Animals List* (CDFW 2018a) that are identified as a Species of Special Concern (SSC) or included on the state Watch List (WL), as well as birds considered Birds of Conservation Concern (BCC) by USFWS.

4.2.2.1 Floristic Surveys for Special-Status Plant Species

Based on the literature/database review and the results of the initial site assessment, Dudek conducted focused protocol-level surveys for special-status plant species known to occur in the region and with potential to occur on the Project site. The surveys were conducted in April and July 2018, and were timed to coincide with the blooming period of the target plant species. Table 1, below, provide a summary of the botanical surveys conducted on the Project site, personnel, and conditions.

Table 1. Summary of Botanical Surveys, Personnel, and Conditions

Date	Time	Survey Type	Personnel	Site Conditions
4/18/2018	0700-1430	BOT	Heather Moine, Russell Sweet, Andrea Dransfield, Brandon Vidrio	45°F to 63°F, 80%-50% cloud cover, 1-4 mph winds
7/17/2018	0700-1330	BOT/VEG	Heather Moine, Russell Sweet	75°F to 103°F, 0% cloud cover, 2-6 mph winds

Notes: BOT – botanical; VEG – vegetation mapping; mph – miles per hour

The floristic botanical surveys were conducted by Dudek botanists in accordance with USFWS, CDFW, and CNPS guidelines (USFWS 2000; CDFW 2018c; CNPS 2001). These surveys involved pedestrian transects spaced approximately 65 to 100 feet (approximately 20 to 30 meters) apart, depending on topography and vegetative cover. During the surveys, any special-status species that was observed was mapped using ESRI ArcGIS Collector.

All plant species encountered during the field surveys were identified to subspecies or variety, if possible. Species that could not be identified in the field were brought into the laboratory for further investigation. Scientific and common names for plant species with a California Rare Plant Rank (formerly CNPS List) follow the CNPS's On-Line Inventory of Rare, Threatened, and Endangered Plants of California (CNPS 2019b). For plant species without a California Rare Plant Rank, scientific names follow the Jepson Interchange List of Currently Accepted Names of Native and Naturalized Plants of California (Jepson Flora Project 2018) and common names follow the *California Natural Community List* (CDFW 2018b) or the United States Department of Agriculture (USDA) Natural Resources Conservation Service Plants Database (USDA 2018b).

4.2.2.2 San Joaquin Kit Fox Assessment

Focused surveys for burrows or dens that are potentially suitable for the state- and federally protected San Joaquin kit fox (*Vulpes macrotis mutica;* SJKF) were conducted pursuant to guidance provided in the *San Joaquin Kit Fox Survey Protocol for the Northern Range* (Northern Range Protocol; USFWS 1999). Although developed for the SJKF occurring farther north in their range, the Northern Range Protocol is the standard protocol used for surveys throughout the San Joaquin Valley. In addition to burrow surveys, this protocol calls for an early evaluation of a site and its potential to support SJKF to determine whether protocol surveys are necessary. The initial site assessment conducted by Dudek on March 8, 2018 fulfilled the assessment protocols for this species and, based on the results of this assessment, and known occurrences of SJKF in the region, it was determined that this species could potentially occur on the Project site.

Pursuant to the USFWS protocol, surveys for suitable burrows/dens were conducted by qualified biologists in April 2018. Areas under active cultivation, including areas recently disked or disturbed, were considered to be unsuitable and eliminated from the survey area. All suitable habitat areas within the Project site that were surveyed are identified as priority survey areas on Figure 3.

The burrow/den surveys consisted of a single pass of pedestrian transects where biologists searched for potential SJKF dens as well as burrows of other species, such as American badger (*Taxidea taxus*), coyote (*Canis latrans*), and burrowing owl (*Athene cunicularia*), that could be used by SJKF. Pedestrian transects were spaced approximately 65 feet (20 meters) apart. Biologists inspected all areas of the ground surface between transect lines to ensure full visual coverage of the site. When any burrow measuring a minimum of 4 inches in diameter was located, the biologists recorded the location of the burrow, burrow dimensions, sign of recent activity, and any other sign to indicate species involved or that might potentially use the burrow, including American badger, burrowing owl, and coyote. Sign and burrow characteristics noted included scat, tracks, shape of the burrow opening, and the orientation of claw marks (a potential indication of whether a canid or a badger excavated a burrow). The locations of all potentially suitable burrows/dens were marked using ESRI ArcGIS Collector.

According to the Northern Range Protocol for San Joaquin kit fox (USFWS 1999), the standard protocol for SJKF surveys in any part of their range, any potential kit fox burrows that were observed were identified as being either natal dens, active dens, or potential dens. "Natal dens" are dens at which the presence of pups was confirmed either by observation or sign such as scat and tracks. "Active dens" refers to dens presumed to be occupied at the time of examination, or to have been recently occupied, due to sign such as recent digging, tracks, or fresh scat. "Potential dens" include those that were judged to be of a particular species, but that were not recently active, as well as dens that could be occupied by that species, but were not confirmed to have been occupied by the species.

4.2.2.3 Burrowing Owl Surveys

Burrowing owl surveys were conducted in areas of potentially suitable habitat on the Project site between early April and July 2018 per the guidelines for breeding-season surveys in Appendix D of the *Staff Report on Burrowing Owl Mitigation* (CDFG 2012). Suitable habitat areas within the Project site that were surveyed are identified as priority survey areas as indicated on Figure 3. Dudek biologists performed an initial survey pass in April 2018, with two or more biologists walking together in straight-line transects, with a maximum spacing of approximately 65 feet (20 meters). Biologists marked the location of all burrows approximately 4 inches or greater at the entrance using ESRI ArcGIS Collector. Burrows were investigated for burrowing owl sign, including regurgitated castings (pellets) of prey remains, scat (whitewash), and feathers, and the locations of any burrowing owl individuals were recorded. Areas of California ground squirrel (*Spermophilus beecheyi*) activity were also noted. Surveys were mostly conducted in hours when burrowing owls are active, from approximately 6:00 a.m. until approximately 10:00 am.

Based on the results of the initial pass, portions of the survey area where no suitable burrows or ground squirrel activity were noted were eliminated from the survey area as being currently unsuitable. Biologists employed the same methods in subsequent passes, focusing on the presence of burrowing owl sign and burrowing owls in the priority survey areas. Three additional survey passes were conducted in the priority survey areas between May 2018 and July 15, 2018, with each of the survey passes separated by at least three weeks. Table 2, below, summarizes the focused surveys conducted for burrowing owl on the Project site in 2018.

Table 2. Summary of Burrowing Owl, San Joaquin Kit Fox, and American Badger Surveys

Date	Time	Survey Type	Personnel	Site Conditions
4/10/2018	0845-1600	BUR, SJKF, AMBA	Russell Sweet, Chris Frey	69°F to 80°F, 40%-50% cloud cover, 7-11 mph winds
4/11/2018	0830-1330	BUR, SJKF, AMBA	Russell Sweet, Chris Frey	66°F to 72°F, 40%-30% cloud cover, 0-5 mph winds

Table 2. Summary of Burrowing Owl, San Joaquin Kit Fox, and American Badger Surveys

Date	Time	Survey Type	Personnel	Site Conditions
5/18/2018	0655-0730	BUR, SJKF, AMBA	Russell Sweet, Heather Moine	56°F, 0% cloud cover, 6 mph winds, gusts up to 8 mph
6/20/2018	0743-1000	BUR, SJKF, AMBA	Russell Sweet	74°F to 89°F, 0% cloud cover, 4-5 mph winds
7/13/2018	0745-0950	BUR, SJKF, AMBA	Russell Sweet	77°F to 84°F, 25%-10% cloud cover, 3-7 mph winds

Notes: SJKF – San Joaquin kit fox; BUR – burrowing owl; AMBA – American badger; BOT – botanicals; mph – miles per hour

4.2.2.4 Swainson's Hawk Surveys

Focused Swainson's hawk surveys were conducted according to the CDFW-endorsed protocol for the Central Valley, developed by the Swainson's Hawk Technical Advisory Committee (SHTAC 2000). Three surveys were conducted in Period III (April 5 to April 20) and two surveys in Period V (June 10 to July 31). Visits to monitor progress at potential nest sites were conducted during Period IV (April 20 to June 10). Because surveys began late, none were conducted during Period II of the protocol (March 20 to April 5). However, because Swainson's hawk activity increases around nest sites in the April 5 to April 20 period, Swainson's hawks are typically detected relatively easily during this period. In addition, the protocol recommends that surveys be conducted during a minimum of two of the five survey periods. Period I (January to March) is considered an optional survey period during which Swainson's hawks may not be present on territories. Biologists also recorded any Swainson's hawk observations and behavior incidentally observed during other biological surveys conducted in 2018. Information gained in this fashion was used to inform the focused surveys. Table 3, below, summarizes the Swainson's hawk surveys conducted on the Project site in 2018.

During each focused Swainson's hawk survey, biologists visited locations where suitable nest trees had been previously identified on the Project site and within approximately 1.0 mile of the site. Since surveys conducted during the June 10 to July 31 survey period resulted in no observations of nesting Swainson's hawks or nesting behavior, the survey was expanded to include a 5.0 mile buffer of the Project site in an attempt to locate nesting birds within the region that could potentially use the Project site as foraging habitat. Where possible, trees or tree clusters were examined from multiple angles and for extended periods. Trees that were confirmed not to have nests during early surveys were not prioritized during later surveys. Some areas where biologists did not have access to private roads received relatively limited coverage. Although orchards are not typically considered suitable nesting habitat for this species in the Central Valley, Swainson's hawks were observed exhibiting behavior consistent with potential nesting around orchards on the Project site, so additional focus was given to this agricultural community. Locations of any observed Swainson's hawks and suitable or active nest structures were documented and mapped.

Table 3. Summary of Swainson's Hawk Surveys

Date/Times	Times	Survey Type	Personnel	Site Conditions
4/10/2018	1430-2005	Swainson's Hawk Survey	Dave Compton	71°F to 77°F, 60%-70% cloud cover, 2-6 mph winds
4/11/2018	0732-1130	Swainson's Hawk Survey	Dave Compton	55°F to 67°F, 20%-30% cloud cover, 1-8 mph winds
4/12/2018	1630-1934	Swainson's Hawk Survey	Randall McInvale	72°F to 66°F, 5% cloud cover, 7.5-3 mph winds

Table 3. Summary of Swainson's Hawk Surveys

Date/Times	Times	Survey Type	Personnel	Site Conditions
4/13/2018	0633-1205	Swainson's Hawk Survey	Randall McInvale	58°F to 71°F, 0% cloud cover, 0-10 mph winds
4/19/2018	1634-1930	Swainson's Hawk Survey	Russell Sweet	70°F to 64°F, 45%-10% cloud cover, 12 mph winds
4/20/2018	0637-1206	Swainson's Hawk Survey	Russell Sweet	47°F to 69°F, sunny and clear, 0% cloud cover, 3-8 mph winds
6/20/2018	0743-1200	Swainson's Hawk Survey	Russell Sweet	74°F to 89°F, sunny and clear, 0% cloud cover, 4-5 mph winds
6/20/2018	1602-2015	Swainson's Hawk Survey	Russell Sweet	98°F to 84°F, sunny and clear, 0% cloud cover, 5-10 mph winds
7/17/2018	1600-2016	Swainson's Hawk Survey	Russell Sweet	102°F to 90°F, sunny and clear, 5%-10% cloud cover, 8-12 mph winds
7/18/2018	0730-1200	Swainson's Hawk Survey	Russell Sweet	75°F to 95°F, sunny and clear, 5%-25% cloud cover, 3-5 mph winds

Notes: mph – miles per hour

4.2.2.5 Delineation of Potentially Jurisdictional Aquatic Resources

Dudek biologist Randall McInvale performed a formal delineation of potentially jurisdictional aquatic resources within the Project site on September 12, 2018. All areas determined as being potentially subject to the jurisdiction of the USACE, RWQCB, or CDFW based on the literature/database review and/or on the initial reconnaissance-level field assessment described above were investigated to determine potential jurisdictional status.

The delineation was performed in accordance with the methods prescribed in the USACE's 1987 *Wetland Delineation Manual* (TR Y-87-1) (Environmental Laboratory 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (USACE 2008a), *A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (USACE 2008b). For non-tidal waters of the United States, the USACE generally takes jurisdiction within rivers and streams to the lateral extent of the "ordinary high water mark" (OHWM), where no adjacent wetlands are present. If adjacent wetlands are present, the jurisdiction extends to the limit of wetlands. The USACE and RWQCB jurisdictional determination consists of the field identification of jurisdictional wetlands using the three parameters described in the USACE manual: hydrophytic vegetation, hydric soils, and hydrology (Environmental Laboratory 1987). The presence of a defined channel (bed and bank) and/or predominance of hydrophytic vegetation, where associated with a stream channel, is used to determine the extent of CDFW jurisdiction.

Data collected during the field assessment consisted of wetland sample points (wetland determination data forms) and global positioning system (GPS) data associated with the geographic boundaries of potentially jurisdictional wetland and non-wetland waters.

5 Results

This section discusses results of the literature review and focused surveys conducted in 2018 as described in Section 4, above. Descriptions of the soil types occurring on the Project site are provided in Appendix A. Cumulative lists of plant and wildlife species observed during the surveys are included in Appendix B and Appendix C, respectively. Photo documentation of site conditions during the field surveys is provided in Appendix D.

At the time of the site visit, the Project site was not being actively farmed and appeared to be recently disked in preparation for the next dry farming season.

5.1 Vegetation Communities, Land Covers, and Floral Diversity

The vegetation communities and land cover types observed on the Project site are shown on Figure 4. A total of six land cover types including eucalyptus groves, quailbush scrub shrubland, tamarisk thickets, general agriculture, ruderal areas, and disturbed lands were mapped within the Project site and are summarized in Table 4 and described in more detail below. Of these communities, only the quailbush scrub shrubland alliance is considered to be a native community; no other native vegetation communities or any sensitive vegetation communities, were identified within the Project site.

Table 4. Existing Vegetation and Land Cover Types on the Heartland Solar Project Site

Land Cover Type	State Rank[1]	Acreage
Forest and Woodlands		
Eucalyptus Groves Woodland Semi-Natural Alliance (EG)	NR	17.14
Shrublands		
Quailbush Scrub Shrubland Alliance (QS)	S4	1.63
Tamarisk Thickets Shrubland Semi-Natural Alliance (TAM)	NR	3.30
Partially Vegetated and Non-Vegetated Habitats		
General Agriculture (AGR)	–	2,272.43
Ruderal (RUD)	–	20.80
Disturbed Lands (DL)	–	1.11
	Total	**2,316.41**

Notes:

[1] State rank in accordance with Sawyer et al. (2009) current rarity ranking (CNPS 2019a)
State Rank – the alliance's rarity and threat in California.
S4: Greater than 100 viable occurrences statewide, and/or more than 12,950 hectares. Not sensitive.
NR – no rank. No rank provided or listed as none.

5.1.1 Vegetation Communities and Other Land Cover Types

5.1.1.1 Eucalyptus Groves Woodland Semi-Natural Alliance

Eucalyptus Groves Woodland Semi-Natural Alliance ("eucalyptus groves") is listed in *A Manual of California Vegetation,* Second Edition (MCV2, Sawyer et al. 2009) and *California Natural Community List* (CNCL, CDFW 2018b) but does not have a state sensitivity rank as it is composed of non-native species. Eucalyptus groves contain eucalyptus trees (*Eucalyptus* spp.) as the dominant species in the tree canopy. The groves typically have an open to continuous tree canopy less than 197 feet (60 meters) in height. Understory shrubs and herbaceous layers are sparse to intermittent and the herbaceous layer is sparse to intermittent. Throughout California, eucalyptus groves occur as planted trees, groves, and windbreaks but also occur in uplands or bottomlands and adjacent to stream courses, lakes, or levees (Sawyer et al. 2009).

On the Project site, two eucalyptus groves comprising a total of 17.14 acres occur within the northern central portion of the site.

5.1.1.2 Quailbush Scrub Shrubland Alliance

Quailbush Scrub Shrubland Alliance ("quailbush scrub") is listed in MCV2 and CNCL as State Rank 4 (not sensitive) and is not considered a sensitive habitat. Quailbush scrub includes quailbush (*Atriplex lentiformis*) as dominant in the shrub canopy, has an open to intermittent shrub canopy less than 16 feet (5 meters) in height, and a variable herbaceous ground layer. Throughout southern California, quailbush scrub typically occurs on gentle to steep slopes from coastal shrublands, alkali sinks, alkali meadows, flats, washes, and wetlands, to inland desert washes and oases. It is often found in disturbed areas where soils are alkaline or saline clays (Sawyer et al. 2009).

One relatively small area of quailbush scrub, comprising 1.63 acres, was documented within the north-central portion of the Project site. In addition to quailbush, other species observed within the quailbush scrub included ripgut brome (*Bromus diandrus*) and annual yellow sweetclover (*Melilotus indicus*).

5.1.1.3 Tamarisk Thickets Shrubland Semi-Natural Alliance

Tamarisk Thickets Shrubland Semi-Natural Alliance ("tamarisk thickets") is listed in MCV2 and CNCL but does not have a state rank as it is composed of non-native species. Tamarisk thickets include tamarisk (*Tamarix ramosissima*) or other *Tamarix* spp. dominant in the shrub canopy. Emergent trees may be present at low cover, including Fremont cottonwood (*Populus fremontii*) or willow (*Salix* spp.). Tamarisk thickets shrubland semi-natural alliances occur at the margins of arroyos, lakes, ditches, washes, rivers, and other watercourses (Sawyer et al. 2009).

One tamarisk thicket community, comprising 3.30 acres, was mapped in the north-central portion of the Project site.

5.1.1.4 General Agriculture

General agriculture is an anthropogenic land cover type, is not described in MCV2 or CNCL, and does not have a state rank, as it is composed of non-native species. Farming practices on the project site include soil disking and tilling, crop planting/production, as well as regular maintenance and disturbance of areas under agricultural production. It is presumed that the farming practices include application of herbicides and fertilizer.

At the time of the field surveys, a majority of the Project site (2,272.43 acres), excluding farm service roadways, was being actively dry-farmed. It was evident that the site was recently disked as, at the time of the survey, the survey area supported no standing vegetation and appeared to be under agricultural production with winter and spring wheat crops.

5.1.1.5 Ruderal

Ruderal areas are characterized as being dominated by weedy, non-native and often invasive species with limited native vegetation resulting in area with low ecological value. Many such areas are a result of historical human-caused disturbances in previously undisturbed natural habitats and that now provide little habitat or foraging potential for wildlife due to the lack of significant cover and food value provided by native vegetation.

Ruderal habitat is not described in MCV2 or CNCL because it is not naturally occurring in California; it is not considered sensitive. Areas mapped as ruderal typically include access roads and roadside areas where vegetation in these areas, if present, is usually sparse and dominated by weedy herbaceous species.

Ruderal habitats comprise approximately 20.90 acres on the Project site and are associated with areas subject to frequent disturbance from vehicle traffic and are mostly absent of vegetation or contain semi-impervious compacted soil surfaces such as on dirt roads and adjacent areas.

5.1.1.6 Disturbed Lands

Disturbed lands are characterized by areas that lack vegetative cover. Disturbed habitat is not described in MCV2 or CNCL because it is not naturally occurring in California. Areas mapped as disturbed habitat (1.11 acres) include roads and adjacent areas.

5.2 Common Wildlife

5.2.1 Amphibians and Reptiles

Amphibians require standing or flowing water for part or all of their life cycle. Ponds, seasonal pools, and drainages provide suitable habitat for common amphibian species. The drainage ditches identified on the Project site did not contain water at the time of the field surveys and are presumed to only contain water during the winter rainy season. No amphibian species were observed during the surveys.

Reptiles occur within a diverse mix of habitats. They typically live in small burrows, which they also use as a refuge from differing ambient temperatures and predators. The history of extensive agricultural practices on the Project site has resulted in little to no suitable habitat being available for reptile species. However, the quailbush, tamarisk thickets, and ruderal communities on site do provide suitable habitat for reptile species. One common reptile species, gophersnake (*Pituophis catenifer*), was observed on the Project site during the field survey efforts.

5.2.2 Birds

The expanse of open agricultural fields on the Project site provides suitable foraging habitat for a variety of common raptor species. Several large trees and electrical transmission line towers adjacent to the site also provide suitable nesting habitat. Several raptor species were often observed throughout the Project site during various field surveys,

including but not limited to, red-tailed hawk (*Buteo jamacensis*), northern harrier (*Circus cyaneus*), and great-horned owl (*Bubo virginianus*). Swainson's hawk (*Buteo swainsoni*), a state-listed threatened species, was also observed and is discussed in more detail in Section 5.4 below.

The site also provides habitat for a variety of common non-raptor bird species. Species that were observed during the field surveys included common raven (*Corvus corax*), mourning dove (*Zenaida macroura*), northern mockingbird (*Mimus polyglottos*), European starling (*Sturnus vulgaris*), western meadowlark (*Sturnella neglecta*), house finch (*Haemorhous mexicanus*) white-crowned sparrow (*Zonotrichia leucophrys*), Eurasian collared-dove (*Streptopelia decaocto*), western kingbird (*Tyrannus verticalis*), mourning dove (*Zenaida macroura*), and loggerhead shrike (*Lanius ludovicianus*). Appendix C provides a list of all bird species observed during site visits.

5.2.3 Mammals

The agricultural fields on the Project site provide cover and foraging habitat for a variety of common small mammal species that, in turn, serve as a prey base for larger mammals and birds. Several small mammal species such as house mouse (*Mus musculus*), deer mouse (*Peromyscus maniculatus*), California vole (*Microtus californicus*), and harvest mouse (*Reithorodontomys megalotis*) may occur in the Project site. Small mammal burrows were observed during various survey efforts, but were largely limited to the ruderal and disturbed areas along the margins of the fields. Several burrows showed sign (i.e., tracks, scat, etc.) of use by California ground squirrel. Mammal species observed included desert cottontail (*Sylvilagus audubonii*) and black-tailed jackrabbit (*Lepus californicus*). Coyote (*Canis latrans*), SJKF, and red fox (*Vulpes vulpes*), are known to occur in the region and may use the Project site for foraging or dispersal. One individual coyote was incidentally observed on the site during the field surveys.

5.3 Common Plants

During the spring and summer 2018 floristic surveys, a total of 53 plant species were observed consisting of 25 percent native plant species and 75 percent non-native plant species. A cumulative list of the plant species observed is included in Appendix B.

5.4 Sensitive Biological Resources

5.4.1 Special-Status Plant Species

Focused surveys for special-status plants were conducted in 2018 to determine the presence/absence of select plant species with potential to occur. Dudek's habitat suitability analysis for special-status plants is based on vegetation, soils, topography, elevation, previous documented occurrences of special-status plants in the vicinity of the site, and field observations during floristic surveys. The site generally lacks habitat for special-status plant species, due to the extent of intensive and on-going disturbance from agricultural production and a lack of suitable communities that typically support the species occurring in the region. In addition, the nearest CNDDB occurrences for most species are more than 5.0 miles from the Project site (CDFW 2019a).

Table 5, below, lists the 22 special-status plant species documented within the region of the Project site, describes habitat requirements, and assesses their potential to occur. No special-status plants were observed on the Project site during the focused special-status plant surveys that were conducted within appropriate blooming periods of all target species.

Table 5. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/ CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Allium howellii var. *sanbenitense*	San Benito onion	None/None/1B.3	Chaparral (openings), valley and foothill grassland; clay, often steep slopes/perennial bulbiferous herb/Apr–May/1,275–4,480	**Not expected to occur.** The site is outside of the species' known elevation range. The Project site lacks chaparral (openings) and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Atriplex cordulata var. *cordulata*	heartscale	None/None/1B.2	Chenopod scrub, meadows and seeps, valley and foothill grassland (sandy); saline or alkaline/annual herb/Apr–Oct/0–1,835	**Not expected to occur.** The Project site lacks suitable chenopod scrub, meadows and seeps, and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Atriplex coronata var. *vallicola*	Lost Hills crownscale	None/None/1B.2	Chenopod scrub, valley and foothill grassland, vernal pools; alkaline/annual herb/Apr–Sep/160–2,085	**Not expected to occur.** The Project site lacks suitable chenopod scrub and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Atriplex depressa	brittlescale	None/None/1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pools; alkaline, clay/annual herb/Apr–Oct/0–1,050	**Not expected to occur.** The Project site lacks suitable chenopod scrub, meadows and seeps, playas, valley and foothill grassland, and vernal pool habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 5. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/ CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Atriplex minuscula	lesser saltscale	None/None/1B.1	Chenopod scrub, playas, valley and foothill grassland; alkaline, sandy/annual herb/May–Oct/45–655	**Not expected to occur** The Project site lacks suitable chenopod scrub, playa, and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Atriplex subtilis	subtle orache	None/None/1B.2	Valley and foothill grassland; Alkaline/annual herb/June, Aug, Sep (Oct)/130–330	**Not expected to occur.** The Project site lacks suitable valley and foothill grassland habitat. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Caulanthus lemmonii	Lemmon's jewelflower	None/None/1B.2	Pinyon and juniper woodland, valley and foothill grassland/annual herb/Feb–May/260–5,185	**Not expected to occur.** The Project site lacks suitable pinyon and juniper woodland and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Chloropyron palmatum	palmate-bracted bird's-beak	FE/SE/1B.1	Chenopod scrub, valley and foothill grassland; alkaline/annual herb (hemiparasitic)/May–Oct/15–510	**Not expected to occur.** The Project site lacks suitable chenopod scrub and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 5. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/ CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Deinandra halliana	Hall's tarplant	None/None/1B.1	Chenopod scrub, cismontane woodland, valley and foothill grassland; clay, sometimes alkaline/annual herb/(Mar)Apr–May/850–3,115	**Not expected to occur.** The site is outside of the species' known elevation range. The Project site lacks suitable chenopod scrub, cismontane woodland, and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Delphinium recurvatum	recurved larkspur	None/None/1B.2	Chenopod scrub, cismontane woodland, valley and foothill grassland; alkaline/perennial herb/Mar–June/5–2,590	**Not expected to occur.** The Project site lacks suitable chenopod scrub, cismontane woodland, and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Extriplex joaquinana	San Joaquin spearscale	None/None/1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland; alkaline/annual herb/Apr–Oct/0–2,740	**Not expected to occur.** The Project site lacks suitable chenopod scrub, meadows and seeps, playa, and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Fritillaria viridea	San Benito fritillary	None/None/1B.2	Chaparral, cismontane woodland; serpentinite slopes; sometimes streambanks, sometimes rocky, sometimes roadsides/perennial bulbiferous herb/Mar–May/655–5,005	**Not expected to occur.** The site is outside of the species' known elevation range and there is no suitable vegetation present. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 5. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/ CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Layia discoidea	rayless layia	None/None/1B.1	Chaparral, cismontane woodland, lower montane coniferous forest; serpentinite, talus and alluvial terraces/annual herb/May/2,605–5,200	**Not expected to occur.** The site is outside of the species' known elevation range and there is no suitable vegetation present. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Layia heterotricha	pale-yellow layia	None/None/1B.1	Cismontane woodland, coastal scrub, pinyon and juniper woodland, valley and foothill grassland; alkaline or clay/annual herb/Mar–June/980–5,595	**Not expected to occur.** The site is outside of the species' known elevation range. The Project site lacks suitable cismontane woodland, coastal scrub, pinyon and juniper woodland, and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Layia munzii	Munz's tidy-tips	None/None/1B.2	Chenopod scrub, valley and foothill grassland (alkaline clay)/annual herb/Mar–Apr/490–2,295	**Not expected to occur.** CNDDB provides a general location for a historical (1940) occurrence, "8-9 miles south of Mendota" that is centered just east of the Project site and overlaps the site; however, the site is disturbed and the species was not observed during surveys performed during the blooming period (CDFW 2019).
Lepidium jaredii ssp. *album*	Panoche pepper-grass	None/None/1B.2	Valley and foothill grassland (steep slopes, clay, sometimes alkaline)/annual herb/Feb–June/605–2,445	**Not expected to occur.** The site is outside of the species' known elevation range. The Project site lacks valley and foothill grassland habitat. The nearest CNDDB occurrence is approximately 4.8 miles east of the Project site (CDFW 2019).

Table 5. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/ CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Madia radiata	showy golden madia	None/None/1B.1	Cismontane woodland, valley and foothill grassland/annual herb/Mar–May/80–3,985	**Not expected to occur.** The Project site lacks suitable cismontane woodland and valley and foothill grassland habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Malacothamnus aboriginum	Indian Valley bush-mallow	None/None/1B.2	Chaparral, cismontane woodland; rocky, granitic, often in burned areas/perennial deciduous shrub/Apr–Oct/490–5,575	**Not expected to occur.** The site is outside of the species' known elevation range and there is no suitable vegetation present. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Monolopia congdonii	San Joaquin woollythreads	FE/None/1B.2	Chenopod scrub, valley and foothill grassland (sandy)/annual herb/Feb–May/195–2,625	**Not expected to occur.** CNDDB provides a general location, "6 miles south of Mendota," for a historical (1935) occurrence that overlaps the northeastern part of the site and is noted as "possibly extirpated." However, the site is disturbed and the species was not observed during surveys performed during the blooming period (CDFW 2019).
Navarretia nigelliformis ssp. *radians*	shining navarretia	None/None/1B.2	Cismontane woodland, valley and foothill grassland, vernal pools; sometimes clay/annual herb/(Mar)Apr–July/210–3,280	**Not expected to occur.** The Project site lacks suitable cismontane woodland, valley and foothill grassland, and vernal pool habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 5. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/ CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Sagittaria sanfordii	Sanford's arrowhead	None/None/1B.2	Marshes and swamps (assorted shallow freshwater)/perennial rhizomatous herb (emergent)/May–Oct(Nov)/0–2,135	**Not expected to occur.** No suitable vegetation present. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Senecio aphanactis	chaparral ragwort	None/None/2B.2	Chaparral, cismontane woodland, coastal scrub; sometimes alkaline/annual herb/Jan–Apr(May)/45–2,625	**Not expected to occur.** The Project site lacks suitable chaparral, cismontane woodland, and coastal scrub habitats. In addition, the species was not observed during surveys performed during the blooming period and there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Notes:

CRPR – California Rare Plant Rank

- 1A – plants presumed extirpated in California and either rare or extinct elsewhere
- 1B – plants rare, threatened, or endangered in California and elsewhere
- 2A – plants presumed extirpated in California, but common elsewhere
- 2B – plants rare, threatened, or endangered in California, but more common elsewhere
- 3 – plants about which more information is needed – a review list
- 4 – plants of limited distribution – a watch list
  - 0.1 – seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
  - 0.2 – moderately threatened in California (20-80% occurrences threatened/moderate degree and immediacy of threat)
  - 0.3 – not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

Federal Designations

FE – Federally-listed as endangered

State Designations

SE – State-listed as endangered

5.4.2 Special-Status Wildlife Species

Focused wildlife surveys were conducted on the Project site in 2018 to document the presence or absence of select special-status species that have potential to occur. To determine the potential for special-status wildlife to occur on the Project site, Dudek compiled a list of wildlife species through a query of CNDDB and IPaC databases (CDFW 2019; USFWS 2019a). The query resulted in identification of 29 species that have potential to occur based on habitat and previous documented occurrences of the species. Dudek eliminated 18 of these species from further consideration based on several factors such as lack of suitable aquatic or terrestrial habitat, or the site being outside of the species' known range. In addition, many special-status wildlife species that occur in the area are avian species that may occasionally fly over or forage over the site, but that are not expected to breed on the site.

Table 6 lists those special-status wildlife species known to occur or with potential to occur on the site based upon soils, vegetation, and elevation and that have been documented within the region of the Project site. Figure 5 shows those special-status wildlife species which have been recorded by the CNDDB to occur within 5.0 miles of the Project site. Note that the species list was built for this analysis from a CNDDB query that included the two USGS quadrangles where the Project site occurs, plus the ten surrounding USGS quadrangles. Therefore, the species list in Table 6 includes species in CNDDB that have been recorded within a distance of greater than 10.0 miles. Table 6 lists the sensitivity status, habitat preference, and potential to occur for each of these species. Categories for potential to occur include "observed" (known to occur), "high potential to occur," "moderate potential to occur," low potential to occur," and "not expected" to occur, based on habitat preferences, range, and existing habitat observed onsite. Those species with some potential to occur or that were observed on the site (a total of 11 species) are discussed further below. Those that have no potential to occur due to various factors such as lack of suitable habitat, the site being outside the known elevation or geographic range, or species that have been extirpated from the region, are not discussed further in this report.

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Invertebrates			
Branchinecta longiantenna longhorn fairy shrimp	FE/None	Sandstone outcrop pools, alkaline grassland vernal pools, and pools within alkali sink and alkali scrub communities	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, the nearest CNDDB occurrence is approximately 0.7 mile east of the Project site (CDFW 2019).
Branchinecta lynchi vernal pool fairy shrimp	FT/None	Vernal pools, seasonally ponded areas within vernal swales, and ephemeral freshwater habitats	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Amphibians			
Rana boylii foothill yellow-legged frog	None/SSC	Rocky streams and rivers with open banks in forest, chaparral, and woodland	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Spea hammondii western spadefoot	None/SSC	Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Reptiles			
Gambelia sila blunt-nosed leopard lizard	FE/SE, FP	Sparsely vegetated alkali and desert scrubs, including semi-arid grasslands, alkali flats, and washes	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Masticophis flagellum ruddocki San Joaquin whipsnake	None/SSC	Open, dry, treeless areas including grassland and saltbush scrub	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Phrynosoma blainvillii Blainville's horned lizard	None/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Thamnophis hammondii two-striped gartersnake	None/SSC	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	**Not expected to occur.** The Project site lacks suitable habitat required for this species. In addition, the nearest CNDDB occurrence is approximately 0.7 mile east of the Project site (CDFW 2019).
Birds			
Agelaius tricolor tricolored blackbird (nesting colony)	BCC/SSC	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture	**Low potential to occur.** No suitable nesting habitat is present onsite. However, the Project site does provide suitable foraging habitat, and the species is known to nest as close as 3.1 miles northeast of the Project site (CDFW 2018a). Additional suitable habitat in the Mendota Wildlife Area may be closer than this. Therefore, the species could potentially occur onsite during winter and/or foraging during nesting season.
Asio flammeus short-eared owl (nesting)	None/SSC	Grassland, prairies, dunes, meadows, irrigated lands, and saline and freshwater emergent wetlands	**Low potential to occur.** While there are no breeding occurrences within approximately 5 miles of the Project site (CDFW 2019), the Project site has suitable ground nesting vegetation and herbaceous cover within the eucalyptus grove area. The Project site also provides suitable foraging habitat for this species.
Athene cunicularia burrowing owl (burrow sites and wintering sites)	BCC/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	**Low potential to occur.** The nearest CNDDB occurrence is approximately 2.6 miles northeast of the Project site (CDFW 2019).The Project site provides suitable foraging habitat and limited suitable nesting habitat. During CDFW protocol surveys that were conducted on the site, no burrowing owls were present.

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Buteo swainsoni Swainson's hawk (nesting)	BCC/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture	**Moderate potential to occur (nesting).** The Project site provides suitable nesting and foraging habitat. Surveys conducted in 2018 per CDFW survey protocols resulted in no successful SWHA nesting on the site or within a 1-mile buffer. However, Swainson's hawks were observed perching and foraging onsite on several occasions during surveys (Figure 6). A pair of Swainson's hawks was observed at a nest east of SR-33 on April 20, 2018, and the pair was observed copulating. By June 20, 2018, the nest had apparently been abandoned. The nearest CNDDB occurrence is approximately 4.7 miles northwest of the site (CDFW 2019).
Charadrius montanus mountain plover (wintering)	BCC/SSC	Winters in shortgrass prairies, plowed fields, open sagebrush, and sandy deserts	**Moderate potential to occur.** The Project site provides suitable wintering habitat and there is some potential for the species to occur during winter or migration. Records for this species are scarce in the region, however, and many areas of apparently suitable habitat are unoccupied. The nearest CNDDB occurrence is approximately 2.8 miles east of the Project site (CDFW 2019).
Circus cyaneus northern harrier (nesting)	None/SSC	Nests in open wetlands including marshy meadows, wet lightly-grazed pastures, old fields, freshwater and brackish marshes, but also in drier habitats such as grassland and grain fields; forages in variety of habitats, including grassland, scrubs, rangelands, emergent wetlands, and other open habitats.	**Not expected to occur (nesting).** Observed foraging onsite on April 10, 2018. The site lacks the tall dense ground cover for suitable nesting habitat. However, the site does provide suitable foraging habitat and one harrier was observed just northwest of the site during migratory period in 2018.
Coccyzus americanus occidentalis western yellow-billed cuckoo (nesting)	FT, BCC/SE	Nests in dense, wide riparian woodlands and forest with well-developed understories	**Not expected to occur.** The Project site does not provide suitable nesting or foraging habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Eremophila alpestris actia California horned lark	None/WL	Nests and forages in grasslands, disturbed lands, agriculture, and beaches; nests in alpine fell fields of the Sierra Nevada	**Occurs onsite.** The Project site contains suitable nesting habitat within the plowed fields and open bare ground areas. The Project site also provides suitable foraging habitat for this species. Several California horned lark were observed during fieldwork conducted on the site.
Falco columbarius merlin (wintering)	None/WL	Forages in semi-open areas, including coastline, grassland, agriculture, savanna, woodland, lakes, and wetlands	**Moderate potential to occur.** The Project site provides suitable foraging habitat and the species could forage onsite on an irregular basis during winter or migration.
Falco mexicanus prairie falcon (nesting)	BCC/WL	Forages in grassland, savanna, rangeland, agriculture, desert scrub, alpine meadows; nest on cliffs or bluffs	**Not expected to occur (nesting).** Moderate potential to forage outside the nesting season. No suitable nesting habitat is present on site. In addition, there are no breeding occurrences within approximately 5 miles of the Project site (CDFW 2019a). However, the site does provide suitable foraging habitat and because this species is known to occur within the region, there is potential for prairie falcon to forage onsite on a regular basis.
Lanius ludovicianus loggerhead shrike (nesting)	None/SSC	Nests and forages in the open habitats with scattered shrubs, trees, or other perches.	**Occurs onsite.** Suitable nesting and foraging habitat is present on the Project site. Eight loggerhead shrikes were observed onsite during survey efforts (Figure 6).
Plegadis chihi white-faced ibis (nesting colony)	None/WL	Nests in shallow marshes with areas of emergent vegetation; winter foraging in shallow lacustrine waters, flooded agricultural fields, muddy ground of wet meadows, marshes, ponds, lakes, rivers, flooded fields, and estuaries	**Not expected to occur (nesting).** No suitable nesting habitat is present onsite. CNDDB includes no breeding occurrence within 5 miles of the Project site (CDFW 2019a). However, the Project site does provide suitable foraging habitat, and the species could forage onsite on an irregular basis at any season.

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Riparia riparia bank swallow (nesting)	None/ST	Nests in riparian, lacustrian, and coastal areas with vertical banks, bluffs, and cliffs with sandy soils; open country and water during migration	**Not expected to nest.** Low potential to occur while foraging. No suitable nesting habitat is present onsite. In addition, there are no breeding occurrences within approximately 5 miles of the Project site (CDFW 2019). However, while the species is not expected to nest onsite, the Project site does provide marginally suitable foraging habitat, mostly in winter, due to the lack of irrigation.
Mammals			
Ammospermophilus nelsoni Nelson's antelope squirrel	None/ST	Arid annual grassland and shrubland with saltbushes (*Atriplex* spp.), California jointfir (*Ephedra californica*), bladderpod (*Physaria* spp.), goldenbushes (*Astereae*), snakeweed (*Gutierrezia* spp.)	**Not expected to occur.** No suitable habitat present on the Project site. The clay loam soils as well as the regular tilling of the Project site makes the site unsuitable habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Dipodomys ingens giant kangaroo rat	FE/SE	On fine sandy loam soils with sparse forb vegetation and low-density alkali desert scrub	**Not expected to occur.** No suitable habitat present on the Project site. The clay loam soils as well as the regular tilling of the Project site makes the site unsuitable habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Dipodomys nitratoides exilis Fresno kangaroo rat	FE/SE	Alkali sink/open grassland habitats; sands and saline sandy soils in chenopod scrub	**Not expected to occur.** No suitable habitat present on the Project site. The clay loam soils as well as the regular tilling of the Project site makes the site unsuitable habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Eumops perotis californicus western mastiff bat	None/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	**Not expected to roost.** The Project site lacks suitable substrates for roosting. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 20189). In addition, this species has a low potential to forage because of the lack of suitable roosting habitat in the vicinity.
Lasiurus blossevillii western red bat	None/SSC	Forest, woodland, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange; roosts in tree canopy	**Moderate potential to roost.** The orchards in the southwest portion of the Project site, and the central eucalyptus groves within the project site, may be used for roosting. There are no occurrences within approximately 5 miles of the Project site (CDFW 2019), although this species is known to occur in the San Joaquin Valley.
Onychomys torridus tularensis Tulare grasshopper mouse	None/SSC	Low, open scrub, and semi-scrub habitats in arid Lower Sonoran associations	**Not expected to occur.** No suitable habitat present on the Project site. The clay loam soils as well as the regular tilling of the Project site makes the site unsuitable habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019).
Taxidea taxus American badger	None/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils	**Low potential to occur.** Although badgers will utilize a variety of habitats (including agriculture), the majority of the Project site is regularly tilled, which makes most of the site unsuitable. No suitable burrows for badger were observed during focused surveys. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2019). However, there is potential for this species to irregularly pass through some areas of the site during movement events.

Table 6. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name/ Common Name	Status (Federal/State)	Habitat	Potential to Occur
Vulpes macrotis mutica San Joaquin kit fox	FE/ST	Grasslands and scrublands, including those that have been modified; oak woodland, alkali sink scrubland, vernal pool, and alkali meadow	**Low potential to occur.** The Project site provides suitable habitat where this species may forage or burrow. Suitable denning habitat is present. Although no sign of presence of SJKF was observed during surveys of the site, this species occurs within the region and could pass through the Project site or potentially den there in the future.

Notes:
FE = Federally listed as endangered.
FT = Federally listed as threatened.
FP = State Fully Protected.
SE = State listed as endangered.
ST = State listed as threatened.
SSC = California Species of Concern.
BCC=Bird of Conservation Concern
WL = CDFG Watch List.

5.4.2.1 Birds

Thirteen special-status bird species were identified as occurring in the vicinity of the project site, including six that are either listed as endangered or threatened under ESA or CESA or designated as SSC. Species addressed in greater detail below include those bird species either observed during surveys or those considered to have some potential to occur.

Burrowing Owl

Burrowing owl is a USFWS bird of conservation concern and a California Species of Special Concern (SSC). With a relatively wide-ranging distribution throughout the west, burrowing owls are considered to be habitat generalists (Lantz et al. 2004). In California, burrowing owls are yearlong residents of open, dry grassland and desert habitats, and in grass, forb and open shrub stages of pinyon-juniper and ponderosa pine habitats (Zeiner et al. 1990). Preferred habitat is generally typified by short, sparse vegetation with few shrubs, level to gentle topography, and well-drained soils (Haug et al. 1993).

In California, western burrowing owls most commonly live in burrows created by California ground squirrels (*Spermophilus beecheyi*). Burrowing owls may occur in human-altered landscapes such as agricultural areas, ruderal grassy fields, vacant lots, and pastures if the vegetation structure is suitable (i.e., open and sparse); useable burrows or shelter sites are available; and foraging habitat occurs in close proximity (Gervais et al. 2008). Debris piles, rip rap, culverts, and pipes can be used for nesting and roosting.

Several suitable size burrows at least 3-inches in diameter were observed on the Project site. Surveys resulted in no observations of burrowing owl or any sign (i.e., whitewash, pellets, prey remains, feathers, etc.) of this species. However, the Project site does contain potential nesting and foraging habitat for this species.

California Horned Lark

The California horned lark is a WL species that lives in open habitats such as those that are present on the site. This species may forage in the recently plowed fields or agricultural areas on and surrounding the Project site. The Project site provides suitable foraging and nesting habitat for California horned lark during periods when the ground remains undisturbed by plowing or tilling. Although horned lark were observed during the field surveys, no nesting horned lark were observed.

Loggerhead Shrike

The loggerhead shrike is a USFWS Bird of Conservation Concern and a SSC. It is widespread throughout the United States, Mexico, and portions of Canada (Humple 2008). The species is a yearlong resident in most of the United States, including from California east to Virginia and south to Florida, and in Mexico. In California, while shrikes are widespread at the lower elevations in the state, the largest breeding populations are located in portions of the Central Valley, the Coast Ranges, and the southeastern deserts (Humple 2008).

Preferred habitats for loggerhead shrikes are open areas that include scattered shrubs, trees, posts, fences, utility lines, or other structures that provide hunting perches with views of open ground, as well as nearby spiny vegetation or man-made structures (such as the top of chain-link fences or barbed wire) that provide a location to impale prey items for storage or manipulation (Humple 2008). Loggerhead shrikes occur most frequently in riparian areas along

the woodland edge, grasslands with sufficient perch and butcher sites, scrublands, and open canopied woodlands, although they can be quite common in agricultural and grazing areas, and can sometimes be found in mowed roadsides, cemeteries, and golf courses. Loggerhead shrikes occur only rarely in heavily urbanized areas. For nesting, the height of shrubs and presence of canopy cover are most important (Yosef 1996).

The Project site provides suitable foraging and nesting habitat for loggerhead shrikes. Loggerhead shrike were observed on eight occasions during the field surveys. However, no nesting loggerhead shrike were observed.

Mountain Plover

The mountain plover is a California Species of Concern during its wintering period in California from September through March, when it can be found on short grasslands and plowed fields of the Central Valley from Sutter and Yuba Counties southward. Mountain plovers are also found in foothill valleys west of San Joaquin Valley, the Imperial Valley, plowed fields of Los Angeles and western San Bernardino counties, and along the central Colorado River valley. They are found in areas with little or no vegetation, including short grasslands, freshly plowed fields, newly sprouting grain fields, and sod farms.

Focused biological surveys were not conducted to detect mountain plovers, and no biological surveys were conducted during the winter season. Conditions vary from winter to winter in the agricultural lands and pastures where this species often is found. Therefore, occurrence may be sporadic, and mountain plovers may occur on the site on occasion during winter or migration, depending on crop rotation and other factors influencing habitat conditions. The nearest CNDDB occurrence was recorded in December 2001 and is located approximately 2.8 miles east of the Project site (CDFW 2019).

Northern Harrier

The northern harrier is a SSC when breeding. It breeds throughout most of Canada and Alaska; south through the northern and central Great Basin, Rocky Mountains, and Great Plains; in the northeastern United States; and in scattered locales from central, coastal, and southwestern California south to Baja California, Mexico (Smith et al. 2011). Northern harriers winter across most of the coterminous United States south through Mexico, Central America, the Bahamas, and Cuba. In California, northern harriers breed in the Central Valley, Great Basin, most of the Coast Ranges, and in some coastal areas from San Luis Obispo County southward (Davis and Niemela 2008). The Central Valley supports the majority of nesting harriers in California, despite substantial habitat losses in that region.

Northern harriers breed up to about 2,600 feet elevation in the western Sierra Nevada foothills, where they favor open wetland, pasture, and grassland habitats, but also forage in open sagebrush (*Artemisia* spp.) flats (Beedy and Pandolfino 2013). Harriers nest on the ground in wet meadows, marshes, and grasslands, where at least moderately tall and dense vegetation provides sufficient cover to conceal their nest. Extensive grazing generally precludes nesting by northern harriers, which typically require relatively large tracts of undisturbed habitat dominated by thick, tall vegetation, most often in or near wet areas (Smith et al. 2011).

The CNDDB (CDFW 2019) contains no harrier nest records within 5.0 miles of the Project site. In addition, the Project site does not contain suitable nesting habitat for this species. However, during Swainson's hawk surveys on April 20, 2018, one northern harrier was observed just northwest of the Project site (Figure 6).

Swainson's Hawk

The Swainson's hawk (*Buteo swainsoni*) is listed as threatened under CESA. It nests in California in the Central Valley, Klamath Basin, Northeastern Plateau, Lassen County, and the Mojave Desert. This species breeds in riparian areas, stands of trees in agricultural environments, oak savannah, and juniper-sage flats. In the San Joaquin Valley, it typically nests in riparian areas and in isolated tree clusters, often near rural residences or other areas with some human disturbance. Alfalfa fields are the favored foraging areas of Swainson's hawk in the Central Valley, but the species also forages in other low-density row crops, undisturbed grasslands, rangelands, and fallow agricultural fields.

During the initial reconnaissance-level surveys conducted in March 2018, suitable nesting habitat on the Project site was identified within the eucalyptus grove and tamarisk thickets. Offsite nesting habitat was observed within 1.0 mile of the site, including north along Hwy-33 within a long windrow of tamarisk and cottonwood trees, and at several isolated trees and small tree clusters at several locations around the site (Figure 6). Access restrictions made surveying areas off the Project site difficult. However, none of these areas is within 0.5 mile of any area that would potentially be developed as part of the Project.

On April 10, 2018, two adult Swainson's hawks were observed onsite perched together on a snag above an old nest that is suitable in size, but highly exposed, along the northern side of West Adams Avenue (Figure 6). During the observation, one individual was observed to briefly stand in the nest. On April 11, 2018, both adults were observed bringing nest material to the nest. During subsequent surveys, one to two Swainson's hawks were observed consistently in the vicinity of the nest; one hawk was observed perched at the nest tree on April 20, when it was standing in the nest for a brief period of time. During later surveys conducted on June 20, 2018, the nest was no longer present in the snag. Upon closer inspection of the snag, no nesting material was observed below the tree. There was no clear evidence as to why the nest was no longer present and no Swainson's hawks were observed in the area.

Another apparent Swainson's hawks nesting attempt was observed during surveys conducted adjacent to the Project site (Figure 6). On April 12, 2018, one adult Swainson's hawk was observed in a nest within a tamarisk tree approximately 150-feet east of the Project site. The nest was small and appeared to be under construction at the time. A second Swainson's hawk was observed to join the first hawk and both perched near the nest at times. Both birds were observed to chase off a crow within their territory. On April 20, 2018, the two hawks were observed copulating in an adjacent tree. Post copulation, the hawks were observed bringing nesting material to the nest three times during the observation period. However, a subsequent visit to the area on June 20, 2018, resulted in no observations of hawks on the nest and no evidence of nest activity occurring. One adult hawk was observed perched in an adjacent tree but did not approach the nest during the observation period. The biologist conducted observations at the nest several times during the survey period and each visit resulted in no observations of nesting activity or adult Swainson's hawks within the area. Survey visits conducted on July 17 and 18, 2018, also resulted in no observations of nesting activity or adult Swainson's hawks within the area.

Nesting Swainson's hawk surveys were also conducted within 5.0 miles of the Project site and included surveys of nests previously documented in CNDDB. One active nest not previously recorded by the CNDDB was observed by Dudek biologists on July 18, 2018, approximately 2.8 miles east of the Project site inside the Mendota Wildlife Area. One young individual with full feathers was observed feeding in the nest and one adult was observed immediately adjacent to the nest.

One nest site has been documented in the CNDDB within the 5-mile survey area, approximately 4.7 miles northwest of the Project site. This nest site was visited on July 18, 2018. The nest location is documented as being within pine trees associated with a private residence. The CNDDB record indicates that nesting was not confirmed at the time of the observation. At the time of Dudek's survey, two Swainson's hawks were observed in a pine tree on the residence property. However, access to the property was denied and nesting was not confirmed.

Dudek also visited a CNDDB nest site 5.2 miles northeast of the Project site, in the Mendota Wildlife Area. The nest was observed active in June 2008 with no activity in July 2008 (young were presumed fledged). There have been no updates in the CNDDB to this nest location since 2008. LSA conducted protocol Swainson's hawk surveys in 2017 as part of the Little Bear Solar Project located 2 miles north of the Project site (LSA 2017). Their survey area included this nest location, which resulted in no nesting activity observed (LSA 2017). Dudek conducted a survey of the above nest location on July 18, 2018 and no SWHA were observed in the vicinity of the nest location.

In addition, one new active Swainson's hawk nest was observed during protocol surveys conducted by LSA in 2017 for the Little Bear Solar Project. The nest was observed in a casuarina tree (*Casuarina* sp.) west of SR-33 approximately 1.5 miles south of the Little Bear Solar Project and 1.5 miles north of the Heartland Project site. On July 12, 2017, two fledglings and one adult Swainson's hawk were observed on the nest, while one adult Swainson's hawk was observed soaring overhead (LSA 2017). Although Swainson's hawks were observed foraging in the area during protocol level surveys conducted in 2018, no Swainson's hawks were observed nesting at this location. The nest tree was inspected for the presence of the nest on April 12, 2018 and again on April 20, 2018 by two different surveyors; no nests were observed during either survey.

5.4.2.1.1 Other Birds of Prey

Two uncommon birds of prey, the merlin (*Falco columbarius*), a WL species, and prairie falcon (*Falco mexicanus*) a BCC and WL species, have the potential to forage on the Project site and surrounding lands. The merlin does not nest in California; however, it forages in open habitats such as are present on the Project site. The Project site does not contain suitable nesting habitat for prairie falcons; however, the site does provide suitable foraging habitat. Both species occur in a variety of habitats across California, including grasslands, agricultural lands, open brushlands, and open forest. No merlin or prairie falcons were observed during the biological surveys on the project site. However, the surveys were not conducted at an appropriate time of year (fall and winter) to detect merlin.

5.4.2.1.2 Additional Special-Status Bird Species Occurring in the Region

Three additional special-status bird species are known to occur in the region and may forage on the Project site: the tricolored blackbird (*Agelaius tricolor*; ST, SSC for nesting), white-faced ibis (*Plegadis chihi*; SSC for nesting), and bank swallow (*Riparia riparia*; ST). The tricolored blackbird breeds near fresh water, preferably in emergent wetlands with tall, dense cattails or tules, but also in thickets of willow, blackberry, wild rose, and tall herbaceous vegetation. These habitats do not occur on the Project site; however, Fresno Slough and the Mendota Wildlife Area support suitable habitat and this species could periodically use onsite agricultural fields as foraging habitat during the nesting season. It also potentially occurs on the site during winter. No tricolored blackbirds were observed during biological surveys in 2018. CNDDB includes an occurrence for this species at the Mendota Wildlife Area, approximately 3.1 miles east of the Project site.

The white-faced ibis is a WL species that nests in dense emergent wetlands and feeds in emergent wetlands, lacustrine waters, muddy ground in wet meadows, and irrigated pastures or croplands. No white-faced ibis were seen at the Project site or within 1.0 mile of the site and no nesting habitat is present in the

immediate vicinity. In addition, no CNDDB occurrences for this species have been recorded within 5.0 miles of the Project site. However, the project site contains suitable foraging habitat for this species, there is low potential for this species to be present during foraging activities.

The bank swallow is a state threatened species which almost always nests near water. Bank swallow require fine-textured or sandy banks or cliffs to dig horizontal nesting tunnel and burrow (Zeiner et al. 1990). These habitats are absent on the Project site; however, the Fresno Slough and Mendota Wildlife Area support suitable habitat. No bank swallows were observed during biological surveys in 2018. No CNDDB occurrences for this species have been recorded within 5.0 miles of the Project site. However, because the project site contains suitable foraging habitat for this species, there is low potential for this species to forage on the Project site during migration or dispersal.

5.4.2.2 Mammals

As noted in Table 6, two special-status mammal species (SJKF and Western red bat) were identified as having potential to occur on the Project site. Each of these species is discussed further below.

San Joaquin Kit Fox

The SJKF is a year-round resident of arid and semi-arid regions of the San Joaquin Valley and surrounding valleys, and lower elevations of the Sierra Nevada foothills and Coast Ranges from northern Santa Barbara and Ventura Counties north to Contra Costa and San Joaquin Counties (USFWS 1998). The SJKF is the smallest canid species in North America (USFWS 2011).

Kit foxes in the northern portion of the range are mostly associated with annual grassland and valley oak woodland (USFWS 1998). Where kit foxes are found in annual grassland, such as in surrounding valleys, they are generally associated with brome grasses (*Bromus* spp.), fescue (*Festuca* spp.), wild oats (*Avena fatua*), barley (*Hordeum* spp.), and filaree (*Erodium* spp.).

The surveys for SJKF dens on the Project site were conducted on several dates between April and July 2018. During the surveys, eight burrows meeting the minimum size criterion were identified and examined. Of these, none were determined to be SJKF natal dens or active dens. In addition, none were occupied by kit foxes or contained sign (i.e., scat, prey remains, fresh digging, claw marks, etc.) of recent use by kit foxes. Given the relative scarcity of suitable prey on the managed agricultural fields, the disturbed nature of the site, and the lack of CNDDB records in the immediate site vicinity, the potential for SJKF to occur on the site is considered low. This species would likely only occur during long-range movements when individuals may pass through the site between areas of higher quality habitat within the region.

The closest occurrence of the SJKF was recorded in 1947, approximately 7.0 miles northeast of the Project site within the limits of the City of Mendota. Although this species is known to occur in western Fresno County, the CNDDB query resulted in no records of SJKF occurrence within 5.0 miles of the Project site.

Western Red Bat

Western red bat is a SSC. It occurs in the western United States, Mexico, Central Mexico, and possibly South America (Cryan 2003; Pierson et al. 2006). In California, most of the records are from the Central Valley, which is the breeding center for the western red bat in the state. However, western red bats also occur throughout low elevation

areas of California. Generally a year-round resident, there is evidence for seasonal movements in California, but little evidence for mass migrations characteristic of the eastern red bat (*Lasiurus borealis*) and other tree bats (Cryan 2003; Pierson et al. 2006). In the Central Valley, foraging western red bats are closely associated with well-developed riparian zones that provide suitable roosting sites (Pierson et al. 2006). However, western red bats have also been observed in orchard trees and other non-native trees.

No CNDDB occurrences for this species have been recorded within 5.0 miles of the Project site (CNDDB 2018). However, the almond orchards located adjacent and west of the southwest corner of the Project site provide some potential for roosting western red bats; however, due to the regular occurring maintenance to these orchards, the potential for red bats to establish maternity roosts in these trees is considered low, although individuals may roost here for short periods.

5.4.3 Wildlife Movement Corridors

Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration and dispersal of many terrestrial animal species. Wildlife corridors contribute to population viability by assuring continual exchange of genes between populations, providing access to adjacent habitat areas for foraging and mating, and providing routes for recolonization of habitat after local extirpation or ecological catastrophes (e.g., wildfires). Small patches of habitat that serve to connect larger blocks of habitat can often serve as movement corridors and help reduce the adverse effects of habitat fragmentation. Such linkages may be continuous habitat or discrete habitat islands that function as stepping stones for dispersal.

Formal wildlife movement studies were not conducted on the Project site. Given the expanse of open agricultural lands surrounding the Project site, the site itself is not considered an important linkage between larger open space areas that serve as wildlife habitat; in addition, the site and immediate area is not recognized as an important regional migratory corridor by the County or state resource agencies. Although some animals may pass through or along the periphery of the site during localized movement events in search of food or shelter, the agricultural fields can pose a hindrance to movement during the growing season, when crops are mature and actively farmed. During the non-growing season, these fields provide little cover for a large number of species and may expose smaller, less mobile species to predation. The orchards provide good cover for movement where the terrain is relatively flat. However, the small agricultural ditches on the Project are generally shallow, dense with upland vegetation, and do not have connectivity to any natural drainages or waterways; therefore, none of these drainages likely serve as important movement corridors.

5.5.4 Sensitive Vegetation Communities

Sensitive vegetation communities include wetland and riparian communities, as well as those communities that CDFW (2018b) or CNDDB (CDFW 2019) has identified as a high priority for inventory due to a rarity ranking of S1, S2, or S3. Sensitive vegetation communities include areas of sensitive wildlife habitat and plant life (e.g., vernal pools, riparian habitats, flyways and other waterfowl habitats, etc.). No sensitive vegetation communities occur on the Project site.

5.5.5 Potentially Jurisdictional Aquatic Resources

The literature review completed for the Project, including a review of the NWI as noted in Section 4.1, resulted in the identification of a number of potentially jurisdictional aquatic features that may be subject to regulation by the

USACE, RWQCB, and/or CDFW (USFWS 2019b). As previously discussed, Dudek completed a formal delineation of aquatic resources that assessed the entire Project site for the presence of hydrophytic vegetation, hydric soils, and wetland hydrology. Channel features capable of conveying surface water flows were also assessed. In total, two potentially jurisdictional wetland features were assessed and wetland determination data forms were completed for each of these features. A brief discussion of each feature evaluated during the aquatic resources field assessment is provided below. The delineation of aquatic resources, including delineation map, data forms, and photo documentation will be provided in a separate, stand-alone report.

The NWI review identified a number of aquatic resource features classified as R5UBFx – Riverine(R) Unknown Perennial (5) Unconsolidated Bottom (UB) Semi-permanently Flooded (F) Excavated (x), which consist of agricultural ditches, channels and swales. As described in the NWI, these R5UBFx features make up a vast network of interconnected channels throughout the landscape both within the Project site, as well as extending out to agricultural land well beyond the site. Based on the NWI, these features are located along road margins and between agricultural fields, though a review of current site conditions indicate that the majority of these R5UBFx features are no longer present within the Project site and surrounding areas. Few shallow agricultural ditches and swales remain; however, these features do not support defined bed and bank and are isolated (i.e., connections between these features are irregular). Furthermore, these features do not support hydrophytic vegetation or any indicators of wetland hydrology.

A total of five R5UBFx features are present on the Project site that are measurably larger in both depth and overall area. Although these features did not support hydrophytic vegetation or indicators of wetland hydrology, a sample point was established and excavated in the largest of these features to examine indicators of hydric soil. No indicators of hydric soil were observed. Based on the lack of wetland indicators and the lack of connectivity to any waterways in the region, these features are determined to be non-jurisdictional.

Another potentially jurisdictional feature was identified in the NWI review. This features was classified as PUBK – Palustrine (P) Unconsolidated Bottom (UB) Artificially Flooded (K), which is a possible prior irrigation pond. During the aquatic resources field assessment, this feature was assessed and was found to be located in a recently tilled field with no visible topographic relief that would indicate any potential for surface ponding. Nevetheless, this feature was evaluated for the presence of wetland indicators and was found to be negative for hydrophytic vegetation and wetland hydrology. Following the establishment and examination of a sample site within this feature, no indicators of hydric soils were encountered. Based on the lack of wetland indicators and the lack of connectivity to any waterways in the region, this feature was determined to be non-jurisdictional.

Other hydrologic features present within the Project site include culverts under SR-33 that presumably direct road runoff and stormwater runoff to the east and northeast. Although none of the aquatic features evaluated during the field assessment were found to have a connection to these culverts, surface water runoff potentially present during large storm events would presumably flow through these culverts toward Fresno Slough. However, due to the lack of any surface connection to a defined channel, ditch, creek or any other aquatic resources, these culverts are considered to be non-jurisdictional features. In summary, no waters of the United States/State, including wetlands, were identified on the Project site.

Appendix A

Descriptions of Soils Occurring on the Project Site

Based on review of the U.S. Department of Agriculture-Natural Resource Conservation Service web soil survey (USDA NCRS 2018), the soils on the Project site and gen-tie alignment include Tranquility clay loam, Ciervo clay, Ciervo, wet-Ciervo complex, Posochanet clay loam, Cerini sandy loam, and Calflax clay loam. A brief summary of the soils located on the project site is provided herein based on the series descriptions provided by the USDA NRCS because biological resources can often be associated with various substrates; this is particularly true of some special-status plant species and wetland resources. These soils vary widely in depth, fertility, and permeability.

A brief description of the surface soils present within the Project site based on the USDA NRCS Official Soil Series Descriptions (OSDs) (USDA NRCS 2018) is provided below.

Tranquility Clay, Saline-Sodic, Wet, 0 to 1 Percent Slopes

The Tranquility series consists of very deep, somewhat poorly drained soils on fan skirts which formed in alluvium derived dominantly from calcareous sedimentary rock. In areas where this soil occurs, the mean annual precipitation is 8 inches and the mean annual air temperature is 63°F. These soils are used for irrigated crops such as cotton and wheat. They are also used for wildlife habitat on the west edge of Mendota Wildlife Management Area. Vegetation on wildlife management areas consists primarily of timothy, watergrass, and saltbush. This soil type is the most common throughout the project site.

Taxonomic class. Tranquility: Fine, smectitic, thermic Sodic Haploxererts

Typical Pedon

Ap1–0 to 6 inches; grayish brown (2.5Y 5/2) clay; dark grayish brown (2.5Y 4/2) moist; strong coarse subangular blocky structure, extremely hard, very firm, very sticky and very plastic; common very fine roots; few very fine tubular pores; violently effervescent, carbonates disseminated; calcium carbonate equivalent is 3 percent; electrical conductivity is 2.6 decisiemens per meter; sodium adsorption ratio is 14; moderately alkaline (pH 8.2); abrupt smooth boundary. (2 to 8 inches thick).

Ap2–6 to 16 inches; grayish brown (2.5Y 5/2) clay; dark grayish brown (2.5Y 4/2) moist; moderate medium subangular blocky structure, very hard, very firm, very sticky and very plastic; few very fine roots; few very fine tubular pores; violently effervescent, carbonates disseminated and segregated as few fine irregularly shaped concentrations; calcium carbonate equivalent is 4 percent; common fine irregularly shaped gypsum crystals; gypsum content is less than 1 percent; electrical conductivity is 8.7 decisiemens per meter; sodium adsorption ratio is 24; moderately alkaline (pH 8.3); abrupt smooth boundary. (8 to 18 inches thick).

Ciervo Series

Ciervo Clay, Saline-Sodic, Wet, 0 to 1 Percent Slopes; wet-Ciervo complex, saline sodic, 0 to 1 Percent Slopes

The Ciervo series consists of very deep, moderately well drained soils on fan skirt formed in alluvium from sedimentary rock. In areas where this soil occurs, the mean annual precipitation is about 7 inches, and the mean annual air temperature is 63°F. These soils are used principally for irrigated crops such as cotton, seed alfalfa, sugar beets, wheat, onions and tomatoes. Native vegetation is annual grasses, forbs, and saltbrush. This soil type is present in the southwestern and middle portions of the Project site.

Taxonomic class. Ciervo: Fine, smectitic, thermic Vertic Haplocambids

Typical Pedon

Ap1–0 to 7 inches; light brownish gray (2.5Y 6/2) clay, dark grayish brown (2.5Y 4/2) moist; moderate medium and coarse subangular blocky structure; hard, firm, very sticky, and very plastic; few very fine, fine and medium roots; common very fine tubular pores; strongly effervescent, carbonates disseminated, calcium carbonate equivalent is 3 percent; electrical conductivity is 1.2 decisiemens per meter; sodium adsorption ratio is 3; moderately alkaline (pH 8.1); abrupt smooth boundary. (3 to 10 inches thick)

Ap2–7 to 17 inches; light brownish gray (2.5Y 6/2) clay, dark grayish brown (2.5Y 4/2) moist; moderate coarse subangular blocky structure; very hard, firm, moderately sticky, and moderately plastic; few very fine and fine roots; common very fine tubular pores; strongly effervescent, carbonates disseminated, calcium carbonate equivalent is 3 percent; electrical conductivity is 1.2 decisiemens per meter; sodium adsorption ratio is 6; moderately alkaline (pH 8.3); abrupt smooth boundary. (5 to 15 inches thick)

Posochanet Clay Loam, Saline-Sodic, Wet, 0 to 1 Percent Slopes

The Posochanet series consists of very deep, moderately well drained soils on fan skirt formed in stratified alluvium dominantly from calcareous sedimentary rock with influence from granitic rock sources in some areas. In areas where this soil occurs, the mean annual precipitation is about 7 inches, and the mean annual air temperature is 64°F. These soils are used for irrigated crops, mainly cotton, wheat, and seed alfalfa. Native vegetation is annual grasses and forbs. This soil type is present in the northwestern portion of the Project site and along the far eastern portion of the gen-tie alignment.

Taxonomic classes. Posochanet: Fine-silty, mixed, superactive, thermic Sodic Haplocambids

Typical Pedon

Ap1–0 to 7 inches; light brownish gray (2.5Y 6/2) clay loam, dark grayish brown (2.5Y 4/2) moist; coarse strong subangular blocky structure parting to moderate subangular blocky; very hard, friable, moderately sticky and moderately plastic; common very fine and few fine roots; common very fine and fine tubular pores; slightly effervescent, carbonates disseminated; electrical conductivity is 1.6 decisiemens per meter; sodium adsorption ratio is 2; moderately alkaline (pH 7.9); abrupt smooth boundary. (6 to 10 inches thick).

Ap2–7 to 15 inches; light brownish gray (2.5Y 6/2) clay loam, dark grayish brown (2.5Y 4/2) moist; weak coarse subangular blocky structure; very hard, friable, moderately sticky and moderately plastic; few very fine, fine and medium roots; common very fine and fine tubular pores; slightly effervescent, carbonates disseminated; electrical conductivity is 3.6 decisiemens per meter; sodium adsorption ratio is 9; moderately alkaline (pH 8.0); clear smooth boundary. (7 to 10 inches thick).

Cerini Sandy Loam, 0 to 1 Percent Slopes

The Cerini series consists of very deep, well drained soils on fan skirt formed in alluvium dominantly from sedimentary rock. In areas where this soil occurs, the mean annual precipitation is about 7 inches, and the mean annual air temperature is 64°F. These soils are used for irrigated crops of wheat, onion, garlic, tomatoes and cotton. Native vegetation is annual grasses and forbs. This soil type is present in the western portion of the Project site.

Taxonomic classes. Cerini: Fine-loamy, mixed, superactive, thermic Fluventic Haplocambids

Typical Pedon

Ap–0 to 5 inches; light brownish gray (2.5Y 6/2) clay loam, dark grayish brown (2.5Y 4/2) moist; moderate medium subangular blocky structure; very hard, firm, slightly sticky and moderately plastic; common very fine and few fine roots; common very fine tubular and interstitial pores; slightly effervescent, carbonates disseminated; slightly alkaline (pH 7.7); abrupt smooth boundary. (3 to 10 inches thick)

Bw1--5 to 16 inches; light brownish gray (2.5Y 6/2) clay loam, dark grayish brown (2.5Y 4/2) moist; moderate coarse prismatic and moderate medium subangular structure; very hard, firm, moderately sticky and moderately plastic; common very fine and few fine roots; common very fine tubular and interstitial pores; slightly effervescent, carbonates disseminated; moderately alkaline (pH 7.9); abrupt smooth boundary. (6 to 15 inches thick)

Calfax Clay Loam, Saline-Sodic, Wet, 0 to 1 Percent Slopes

The Calfax series consists of very deep, moderately well drained soils on fan skirt formed in alluvium from calcareous sedimentary rock. In areas where this soil occurs, the mean annual precipitation is about 7 inches, and the mean annual air temperature is 63°F. These soils are used principally for crops such as cotton, seed alfalfa, sugar beets, wheat, and safflower. Native vegetation is annual grasses, forbs, and saltbrush. This soil type is present in the northwestern portion of the Project site and along the majority of the gen-tie alignment.

Taxonomic class. Calflax: Fine-loamy, mixed, superactive, thermic Sodic Haplocambids

Typical Pedon

Ap–0 to 8 inches; light yellowish brown (2.5Y 6/4) clay loam, dark grayish brown (2.5Y 4/2) moist; strong coarse subangular blocky structure parting to strong medium subangular blocky; hard, very friable, moderately sticky and moderately plastic; few fine and common medium and fine roots; many very fine tubular and interstitial pores; slightly effervescent, carbonates disseminated; electrical conductivity is 3.6 decisiemens per meter; sodium adsorption ratio is 4; slightly alkaline (pH 7.4); abrupt smooth boundary. (6 to 10 inches thick).

Bw--8 to 26 inches; light olive brown (2.5Y 5/4) clay loam, olive brown (2.5Y 4/4) moist; moderate coarse prismatic and moderate medium subangular blocky structure; hard, friable, moderately sticky and moderately plastic; common very fine roots; many very fine tubular and interstitial pores; slightly effervescent, carbonates disseminated; electrical conductivity is 2.8 decisiemens per meter; sodium adsorption ratio is 5; slightly alkaline (pH 7.4); clear smooth boundary. (16 to 20 inches thick).

Appendix B
List of Plant Species Observed

Dicots

AMARANTHACEAE—AMARANTH FAMILY

Amaranthus blitoides—mat amaranth

APOCYNACEAE—DOGBANE FAMILY

Asclepias fascicularis—Mexican whorled milkweed

ASTERACEAE—SUNFLOWER FAMILY

* *Acroptilon repens*—hardheads
Ambrosia acanthicarpa—flatspine bur ragweed
* *Erigeron bonariensis*—asthmaweed
Helianthus annuus—common sunflower
* *Lactuca serriola*—prickly lettuce
Laennecia coulteri—Coulter's horseweed
* *Senecio vulgaris*—old-man-in-the-Spring
* *Sonchus asper*—spiny sowthistle
* *Sonchus oleraceus*—common sowthistle

BORAGINACEAE—BORAGE FAMILY

Amsinckia menziesii—Menzies' fiddleneck
Heliotropium curassavicum—salt heliotrope

BRASSICACEAE—MUSTARD FAMILY

* *Brassica nigra*—black mustard
* *Capsella bursa-pastoris*—shepherd's purse
* *Hirschfeldia incana*—shortpod mustard
* *Sisymbrium irio*—London rocket

CHENOPODIACEAE—GOOSEFOOT FAMILY

Atriplex lentiformis—quailbush
* *Atriplex rosea*—tumbling saltweed
* *Atriplex semibaccata*—Australian saltbush
* *Atriplex suberecta*—peregrine saltbush
* *Bassia hyssopifolia*—fivehorn smotherweed
* *Chenopodium album*—lambsquarters
* *Chenopodium murale*—nettleleaf goosefoot
* *Salsola tragus*—prickly Russian thistle

CONVOLVULACEAE—MORNING-GLORY FAMILY

* *Convolvulus arvensis*—field bindweed
  Cressa truxillensis—alkali weed

FABACEAE—LEGUME FAMILY

* *Melilotus indicus*—annual yellow sweetclover

FRANKENIACEAE—FRANKENIA FAMILY

Frankenia salina—alkali heath

GERANIACEAE—GERANIUM FAMILY

* *Erodium cicutarium*—redstem stork's bill

MALVACEAE—MALLOW FAMILY

* *Malva parviflora*—cheeseweed mallow
  Malvella leprosa—alkali mallow

MARTYNIACEAE—UNICORN-PLANT FAMILY

* *Proboscidea lutea*—yellow unicorn-plant

MYRTACEAE—MYRTLE FAMILY

* *Eucalyptus camaldulensis*—river redgum
* *Eucalyptus citriodora*—lemonscented gum

POLYGONACEAE—BUCKWHEAT FAMILY

* *Polygonum argyrocoleon*—silversheath knotweed
* *Rumex crispus*—curly dock
* *Rumex dentatus*—toothed dock

SOLANACEAE—NIGHTSHADE FAMILY

Datura wrightii—sacred thorn-apple
* *Nicotiana glauca*—tree tobacco

TAMARICACEAE—TAMARISK FAMILY

* *Tamarix aphylla*—Athel tamarisk
* *Tamarix ramosissima*—tamarisk

ZYGOPHYLLACEAE—CALTROP FAMILY

* *Tribulus terrestris*—puncturevine

Monocots

POACEAE—GRASS FAMILY

* *Avena barbata*—slender oat
* *Bromus diandrus*—ripgut brome
* *Bromus madritensis*—compact brome
* *Crypsis schoenoides*—swamp pricklegrass
* *Cynodon dactylon*—Bermudagrass
  Distichlis spicata—salt grass
* *Festuca perennis*—perennial rye grass
* *Hordeum murinum*—mouse barley
* *Phalaris paradoxa*—hood canarygrass
* *Triticum aestivum*—common wheat

* signifies introduced (non-native) species

Appendix C
List of Wildlife Species Observed

Birds

Blackbirds, Orioles and Allies

ICTERIDAE—BLACKBIRDS

Agelaius phoeniceus—red-winged blackbird
Euphagus cyanocephalus—Brewer's blackbird
Icterus bullockii—Bullock's oriole
Sturnella neglecta—western meadowlark
* *Molothrus ater*—brown-headed cowbird

Emberizines

EMBERIZIDAE—EMBERIZIDS

Passerculus sandwichensis—savannah sparrow
Zonotrichia leucophrys—white-crowned sparrow

Falcons

FALCONIDAE—CARACARAS AND FALCONS

Falco sparverius—American kestrel

Finches

FRINGILLIDAE—FRINGILLINE AND CARDUELINE FINCHES AND ALLIES

Haemorhous mexicanus—house finch

Flycatchers

TYRANNIDAE—TYRANT FLYCATCHERS

Tyrannus verticalis—western kingbird

Hawks

ACCIPITRIDAE—HAWKS, KITES, EAGLES, AND ALLIES

Buteo jamaicensis—red-tailed hawk
Buteo swainsoni—Swainson's hawk
Circus cyaneus—northern harrier

Jays, Magpies and Crows

CORVIDAE—CROWS AND JAYS

Corvus brachyrhynchos—American crow

Corvus corax—common raven

Kinglets

REGULIDAE—KINGLETS

Regulus calendula—ruby-crowned kinglet

Larks

ALAUDIDAE—LARKS

Eremophila alpestris—horned lark

Mockingbirds and Thrashers

MIMIDAE—MOCKINGBIRDS AND THRASHERS

Mimus polyglottos—northern mockingbird

New World Vultures

CATHARTIDAE—CARDINALS AND ALLIES

Cathartes aura—turkey vulture

Old World Sparrows

PASSERIDAE—OLD WORLD SPARROWS

* *Passer domesticus*—house sparrow

Owls

TYTONIDAE—BARN OWLS

Tyto alba—barn owl

STRIGIDAE—TYPICAL OWLS

Bubo virginianus—great horned owl

Pigeons and Doves

COLUMBIDAE—PIGEONS AND DOVES

Zenaida macroura—mourning dove

* *Streptopelia decaocto*—Eurasian collared-dove

Shorebirds

CHARADRIIDAE—LAPWINGS AND PLOVERS

Charadrius vociferus—killdeer

Shrikes

LANIIDAE—SHRIKES

Lanius ludovicianus—loggerhead shrike

Starlings and Allies

STURNIDAE—STARLINGS

* *Sturnus vulgaris*—European starling

Swallows

HIRUNDINIDAE—SWALLOWS

Hirundo rustica—barn swallow

Mammals

Canids

CANIDAE—WOLVES AND FOXES

Canis latrans—coyote

Hares and Rabbits

LEPORIDAE—HARES AND RABBITS

Lepus californicus — black-tailed jackrabbit

Sylvilagus audubonii—desert cottontail

Reptiles

Snakes

COLUBRIDAE—COLUBRID SNAKES

Pituophis catenifer—gophersnake

* Signifies introduced (non-native) species

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech) has prepared this report to present an analysis of the potential impacts of the proposed Heartland Solar Project (Project) on Swainson's hawk (SWHA; *Buteo swainsoni*). The SWHA is currently listed as threatened under the California Endangered Species Act (CESA). This report provides the Lead Agency with information necessary to make findings pursuant to the requirements of the California Environmental Quality Act (CEQA) on the local and regional SWHA nesting population.

The analysis provided in this report was undertaken to evaluate potential Project impacts to SWHA resulting from a loss of foraging habitat during the construction phase of the Project and prior to site restoration. The study design is based on an approach that has previously been used in Fresno and Kings Counties (Estep 2011, 2016; HELIX 2018, 2020; SBC 2023) to support CEQA determinations. This methodological approach combines field surveys, public and proprietary data, and a desktop spatial analysis to estimate the acreage of suitable SWHA foraging habitat required to sustain the regional population of SWHA, as well as the amount of suitable SWHA foraging habitat available. Impacts to SWHA foraging habitat are assessed at both the Project and cumulative levels to determine whether the Project would result in significant impacts to SWHA. Potential Project impacts to nesting SWHA are also discussed.

1.1 Project Location

The Project site is approximately 2,362 acres and is located in unincorporated western Fresno County, approximately 6.5 miles south of the City of Mendota and immediately west of State Route 33. The Project site is generally bound by flat, agricultural lands and other solar energy generation facilities and has an approximate elevation range of 180 to 200 feet above mean sea level. The Project site is within the Coit Ranch United States Geological Survey 7.5-minute topographic quadrangle with the Project site centroid located at approximately 36.6395°, -120.3999°.

1.2 Site History

The Project site has historically been used for dry-farmed agriculture for grain or forage crops or has remained fallowed for approximately the last 10 years. Abandoned irrigation and drainage features are present throughout the Project site but are not in use. Unimproved farm roads exist on the Project site between the Project parcels. Surrounding land uses consist of non-irrigated fields used for dry farming, grazing, or fallow rotations, orchards, and multiple solar facilities.

1.3 Project Description

1.3.1 Overview

The Project proponent proposes to construct, operate, maintain, and decommission a photovoltaic (PV) solar power-generating facility and associated infrastructure that would produce up to 300 megawatts of alternating current (AC) energy at the point of electrical grid interconnection on approximately 2,362 acres of privately owned land in western Fresno County. Power generated by the panels would be transmitted to an electrical inverter located within the array block. The inverter

would convert the direct current power from the arrays into AC power, which in turn would be stepped up to medium voltage (34.5 kilovolt [kV]) to transmit the power from the solar arrays to the proposed onsite solar facility substation. The power collected at this substation would be further stepped up to high voltage (230 kV) for transmission and interconnection to the Pacific Gas and Electric Company's 230 kV Tranquillity Switching Station, located near the northeast corner of the intersection of West Dinuba Avenue and South Ohio Avenue. The offsite portion of the generation-tie (gen-tie) line would be approximately 2 miles long.

The Project would include the construction of solar arrays, inverters, an onsite high-voltage substation and connection to the Pacific Gas and Electric Company-owned Tranquillity Switching Station via a gen-tie line, a potential onsite energy storage system, and other necessary infrastructure including an operation and maintenance building, a supervisory control and data acquisition system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads, and security fencing. Select components of the Project description pertinent to the SWHA analysis are included below.

PV solar power-generating facilities consist of individual solar panels (modules) which are arranged in rows to form solar arrays. The arrays are combined to form larger units called solar blocks or array blocks. For large-scale utility applications, hundreds of array blocks are interconnected as part of the solar power generation facility. Each array block is served by an electrical inverter, which can be located centrally within the array block or distributed within the array footprint. The inverters convert the direct current output from the array to AC which is then conveyed to a transformer. The transformer would step up the AC voltage to deliver the power to the proposed onsite substation.

The solar arrays are linear rows of solar PV modules that would be mounted on horizontal, single axis tracker systems. The module arrays would be arranged in north-south oriented rows and drive motors would rotate the horizontally mounted solar panels from east to west to follow the sun throughout the day, leaving the soil substrate underneath the panels undisturbed during operations. The highest edge of a solar panel on a horizontal tracker would be a maximum of 18 feet above ground surface, which would be achieved during the morning and evening hours when the trackers are tilted at their maximum angle (i.e., either to the east or west, respectively).

Within an array block, typical trackers are spaced approximately 15-25 feet on center (from post to post) to accommodate maintenance personnel, reduce shading by neighboring modules at maximum tilt in the morning and evening when sun angle is low, and to accommodate design parameters that meet applicable Fresno County fire safety requirements. When trackers are horizontal, the spacing between the edges of adjacent rows of modules is approximately 12 feet; this increases to slightly more than 14 feet at maximum tilt. This geometry results in a maximum of 40 percent of the area within a typical array block consisting of solar PV panel surface and often 30 percent or less when viewed from above, and the other 60+ percent remaining visible ground surface.

1.3.2 Construction

Construction of the proposed Project would take place in two major stages. The first stage would include site preparation, grading, and preparing staging areas and on-site access routes, and the second stage would involve assembling the trackers and constructing electrical interconnection

facilities. Construction is anticipated to begin in June 2026 and would continue for up to 18 months, with the facility becoming operational in November 2028. Construction activities would take place primarily during daylight hours, approximately 6:00 a.m. to 7:00 p.m., Monday through Friday. Additional hours, including weekend work, may be necessary. Construction may require some nighttime activity for installation, service or electrical connection, inspection, and testing activities. Nighttime activities would be performed with temporary lighting and would adhere to Fresno County requirements.

Construction would include establishing access roads, installing sediment controls, installing fencing, designating staging and laydown areas, conducting vegetation removal as needed, site grading as needed, trenching or excavating for underground components, installation of posts and solar arrays, construction of inverters, installation of an electrical substation consisting of above-ground facilities mounted on concrete pads, and installation of an energy storage system. Equipment used would be standard construction equipment such as excavators, loaders, graders, scrapers, dozers, cranes, forklifts, and water trucks. Grubbing and grading would occur on the site to achieve the required surface conditions. Because the site is already mostly flat, grading would be minimal. The site's cut and fill would balance, and no importation or exportation of materials would be necessary.

1.3.3 Impact Area

The entire Project site is considered moderate suitability foraging habitat for SWHA. For purposes of this analysis, the interior of the proposed Project fence line, which will include solar array blocks, access roads, concrete equipment pads (inverters/transformers) and buildings (substation, energy storage system, and operations and maintenance building) would result in a Project site of approximately 2,362 acres. The estimated maximum of a 2,362 acre Project site is used in this analysis and assumes the worst-case scenario that the entire area would be unavailable for foraging during the construction period.

1.4 Swainson's Hawk

The SWHA was listed as a state threatened species in California on April 17, 1983. SWHAs inhabit grasslands plains, shrublands, and agricultural regions of western North America during the breeding season and inhabit similar habitat from Central Mexico to southern South America during the migration and non-breeding seasons (Bechard et al. 2010; Airola et al. 2019). In California, most populations are found ranging from the Central Valley to the Great Basin of northeastern California, with some populations in Shasta Valley, Owens Valley, and the Mojave Desert (CDFW 2024). This species nests in California between March 1 and September 15 in riparian groves, stands of trees in agricultural environments, oak savanna, juniper-sage flats, or in solitary trees within close proximity to where they forage. In the Central Valley, SWHAs nest in large native trees such as valley oak (*Quercus lobata*), cottonwood (*Populus fremonti*), walnut (*Juglans californica),* and willow (*Salix* spp.), and increasingly in nonnative trees, such as eucalyptus (*Eucalyptus* spp.) and ornamental pine trees. SWHAs have high nest fidelity (returning to the same nest each year) and will re-use or rebuild existing nests from previous years (CDFW 2016).

SWHAs are open-country hunters that require large open landscapes for foraging and prefer foraging in grasslands, pastures, and agricultural lands that support a suitable prey population. Agricultural cover types that provide suitable foraging habitat conditions include hay, grain and row crops, fallow fields, and irrigated and dryland pasture. SWHAs have become increasingly dependent on foraging in cultivated alfalfa fields and similar crops, as their natural foraging habitats are increasingly being converted into agricultural lands (CDFW 2024). Within the cultivated landscape, hay crops, particularly alfalfa, provide the highest quality because of the low vegetation structure, relatively large prey populations, and because farming operations such as periodic mowing enhance prey accessibility.

1.4.1 Use of the Project Site

SWHA nest surveys were conducted for the Project site in 2018, 2021, 2022, and 2025. During the surveys, biologists confirmed that the Project site and vicinity provided suitable foraging and nesting habitat for SWHA.

Tetra Tech conducted focused SWHA surveys in April and May of 2025 for the Project site and a 10-mile buffer to update prior survey results. The results of this section only include nests documented within the Project site and a 0.5-mile buffer. A total of three SWHA nests were documented within the 0.5-mile buffer during the 2025 surveys. One nest was within a tamarisk tree (*Tamarix* spp.) located within the bounds of the Project site, to the north of West Lincoln and south of West American Avenue and to the east of South Ohio Avenue and to the west of South Derrick Avenue. Two additional nests were located outside of the Project site but within the 0.5-mile buffer, with one immediately adjacent to the Project site near South Ohio Avenue and West Adams Avenue and the second approximately 0.3 mile south of the Project site along State Route 33.

2.0 METHODS

2.1 Regulatory Guidance

The California Department of Fish and Wildlife (CDFW) has developed regional strategies to address land use issues related to SWHA conservation pursuant to both CESA and the CEQA process. The CDFW Region 2 guidelines (CDFW 1994) are often used during CEQA review of proposed projects in the Central Valley.

The guidelines outline methods for conducting nest surveys and avoiding or minimizing impacts to active nests that may result in nest abandonment or otherwise cause injury or mortality to individual SWHA (i.e., "take"), which is regulated under CESA. The 1994 guidelines recommend that no intensive new disturbances or other project-related activities that may cause nest abandonment or forced fledging should be initiated within 0.25 mile of an active nest between March 1 and September 15. The buffer may be extended to 0.5 mile in nesting areas away from urban development, where intensive disturbances are not a normal occurrence during the nesting season. Examples of intensive disturbance cited in the guidelines include heavy equipment associated with construction, use of cranes and draglines, and rock crushing activities (CDFW 1994).

The guidelines also recommend acquisition of replacement lands (i.e., compensatory mitigation) for projects that would result in the loss of foraging habitat acreage sufficient to be considered a

significant impact to the SWHA population pursuant to CEQA definitions. The guidelines state that the determining criteria for CEQA significance is removal of any suitable foraging habitat within 10 miles of an active SWHA nest, which is defined as a nest active at any time in the previous 5 years (CDFW 1994). The recommendations contained in the guidelines do not consider the size of the affected population, the amount and quality of existing foraging habitat, or the size of the project relative to the amount of foraging habitat; however, the guidelines do allow for independent assessment of impacts and development of a conservation strategy as an alternative to the guidelines.

In order to more accurately assess the potential Project impacts to SWHAs, this study quantifies the effects of the proposed Project on the regional SWHA population by analyzing data on land use, nest distribution, and abundance, and to inform a CEQA significance determination based on a more robust biological rationale.

2.2 Methodology

2.2.1 Impacts to Swainson's Hawk Nests

Large trees that could potentially provide nesting habitats for SWHA are located within 0.5 mile of the Project site; therefore, the Project has the potential to result in direct or indirect impacts on breeding SWHAs, if nests are established prior to or during construction activities. As mentioned in Section 1.4.1, three SWHA nests were located within the 0.5 mile of the Project site during the 2025 breeding season. If these nests, or others, are in use during construction of the Project, construction activities could create disturbances to nesting SWHAs, their nests, young, or eggs through increased noise, vibration, night lighting, or human presence. Appropriate exclusion buffer distances or time of year restrictions may be warranted if SWHA nests are active during construction activities.

2.2.2 Impacts to Swainson's Hawk Foraging

The analysis included in this report builds upon methods that have been used for the analysis of impacts to SWHA foraging habitat on several other approved utility-scale solar projects in the region (Estep 2017), including similar projects in Fresno County (Estep 2011, 2016; HELIX 2018, 2020; SBC 2023). In order to provide a more robust assessment of CEQA impacts, it is necessary to extend the analysis beyond the scale of the Project site and the nearest active SWHA nest, which goes beyond the standard CDFW guidelines. The larger-scale analysis considers the availability of suitable foraging habitat, size, and distribution of the regional SWHA population, and the effect of Project development on the availability of suitable foraging habitat to the regional population.

2.2.2.1 Regional Population and Study Area

For purposes of this analysis, the Study Area and the regional SWHA population is defined as the number of active nesting territories documented within 10 miles of the Project site (Study Area; Figure 1). This area equates to approximately 265,598 acres (approximately 415 square miles).

For purposes of this analysis, an active nest is defined as a nest used during one or more of the last 5 years (i.e., since 2019), as defined in the CDFW guidelines (CDFW 1994). The 10-mile radius standard was chosen based on telemetry studies that indicate SWHAs will fly up to 10 miles from the nest to

forage (Babcock 1995; Estep 1989). As such, nesting SWHAs within 10 miles of the Project site may potentially forage on the Project site and thus be affected by the Project through loss of foraging habitat.

The gen-tie route provides limited foraging habitat for SWHAs. Impacts along the gen-tie route would include placement of power poles and would not result in any negligible loss of SWHA foraging habitat. The Project's proposed gen-tie route is encompassed within the Study Area but was not accounted for in the 10-mile buffer.

2.2.2.2 Foraging Habitat Availability

The amount, distribution, and quality of foraging habitat available to the regional population is based on the surrounding land use patterns. SWHA foraging in the Central Valley has shifted to managed cultivated lands and the availability of foraging habitat is now largely dependent on agricultural practices (Estep 1989; Woodbridge 1991; Babcock 1995).

The suitability of individual land cover types is largely a function of two factors: 1) prey abundance; and 2) prey accessibility, which is influenced by vegetation structure (Bechard 1982; Estep 2009). Suitable foraging habitat varies in quality based on agricultural management. Crop types that support large numbers of rodent prey and consistently have a low, open vegetation structure provide the highest quality habitat, while crop types that support low numbers of prey or are characterized by tall and dense vegetation provide the lowest quality foraging habitat. Foraging studies indicate that SWHA preferentially forage in alfalfa, tomato, wheat, oat, and other annually rotated crops that maintain a relatively low vegetation profile and that are harvested during the breeding season. Alfalfa has been shown to provide particularly high quality habitat due to its consistently low vegetation height and high frequency of mowing, and is used by SWHAs at a significantly higher rate relative to its availability in the landscape (Estep 1989, 2009, 2013; Swolgaard et al. 2008; Babcock 1995; Bechard 1982). Other grain crops (e.g., wheat, barley, sorghum), row crops (e.g., tomatoes, sugar beets), and irrigated pasture provide moderate quality habitat, as they are harvested during the breeding season. Crops such as corn, cotton, safflower, melons, and vegetables provide low-quality habitat (Estep 2015). Land uses historically considered unsuitable for SWHA foraging include developed land, orchards and vineyards, solar facilities, and open water (Estep 2017).

Based on the documented parameters of SWHA foraging preference, we have categorized available landscape-scale data on land use as high-, moderate-, or low-quality and as suitable or unsuitable for SWHA foraging.

2.2.2.3 Foraging Habitat Requirements

Although SWHA do not defend a territory beyond the immediate vicinity of the nest, they forage widely over a large area (Estep 2015). Data from two telemetry studies conducted in the Sacramento Valley indicate that SWHA home ranges vary from 830 acres to 21,543 acres (Estep 1989; Babcock 1995). The average home range size from Babcock's study (1995) was 9,978 acres (N=5) and from Estep's study (1989) was 6,820 acres (N=12). Smaller home ranges generally consist of high percentages of alfalfa, fallow fields, and dry pastures (Babcock 1995; Woodbridge 1991; Estep 1989). Where nests are located in the immediate vicinity of high-quality foraging habitat, home range sizes

are as low as 830 acres (Estep 2015). This study used the average home range size of 6,820 acres from Estep's 1989 study for analysis purposes because it represents a reasonable estimate of home range size and is supported by field research.

It is important to note that home range and foraging territory are not synonymous. The 6,820-acre home range is the average area that an individual SWHA will occupy during the course of the breeding season; however, within this area, foraging occurs opportunistically where conditions provide accessible prey (Estep 2015). Furthermore, this area is not defended and SWHAs often forage communally (Estep 1989). Although average home range size may not be an accurate indicator of realized foraging habitat acreage, it is not feasible to precisely quantify the foraging area used by individuals of wide-ranging, opportunistic species such as SWHAs; therefore, the average home range size is a useful baseline that can be adjusted to account for factors that affect the amount of the home range that provides the essential resource base for the SWHA nesting territory and thus determines the amount of habitat required to sustain a nesting pair (Estep 2015).

Factors that affect the amount of home range that provides the essential resource base for the SWHA nesting territory include 1) home range overlap, 2) habitat suitability, and 3) foraging outside of the Study Area. Each of these factors is described in detail below.

Home range overlap. Home ranges within a population frequently overlap, as SWHAs forage opportunistically over a shared landscape and often gather in large numbers to forage during agricultural activities that expose prey such as harvest, disking, burning, or flooding. Estep (1989) found that average overlap among home ranges within a population was 40 percent. Adjusting the average home range size downward by the average amount of overlap partially accounts for the extent to which SWHA in a population share the available foraging habitat in the region.

Habitat suitability. While SWHAs utilize a large home range, actual foraging takes place in a subset of the total home range, and most prey capture attempts are in moderate- or high-quality habitat areas (Estep 2015). Most SWHA home ranges are likely to contain some unsuitable and low-quality habitat areas that do not contribute appreciably to the resource base available in the home range. In order to account for this, the average home range can be adjusted downward to reflect only the proportion of the suitable foraging habitat in the Study Area that is moderate- or high-quality habitat (Estep 2015).

Foraging outside the Study Area. Because SWHAs utilize land up to 10 miles from the nest for foraging, some portion of the potential foraging habitat available to a nesting pair in the regional population will be outside the Study Area, unless the nest is inside the Project site boundary. Comparing only the habitat available inside the Study Area to the total habitat requirements of the regional population would substantially underestimate the amount of habitat available to the regional population. The amount of overlap between the Study Area and the potential foraging territory of a nest will decrease with distance from the Project site. This relationship can be represented in a simplified manner with Equation 1, which is a trigonometric formula for the overlap (*A*) between two circles of unit radius (radius=1):

$$A = 2cos^{-1}\left(\frac{d}{2}\right) - \frac{d}{2}\sqrt{4 - d^2}$$

where *d*=distance between the centers of the circles expressed as a proportion of the radius, and radius=1. This is a suitable approximation of the amount of a given nest's potential foraging area within the Study Area as a function of its distance from the Project site, as the Study Area is approximately a circle of radius 10 miles centered on the Project site, and the potential foraging area available to a nesting pair of SWHAs is a circle of radius 10 miles centered on the nest. The measure of overlap (*A*) for each pair of nests is used to calculate the weighted average overlap between the Study Area and the potential foraging area available to the regional population.

After applying Equation 1 to each nest location in the regional population and calculating the weighted average overlap of all nests, the total amount of foraging habitat required by the regional population can be adjusted to reflect the average proportion of all home ranges that are outside the Study Area. For this analysis, nest distances from the Project site were binned in increments of 1 mile, and the value of *d* for each bin was the mid-point of the distance increment (e.g., all nests between 2 and 3 miles from the Project site boundary were given a value of 2.5). As an example, for a nest that is between 2 and 3 miles from the center of the Project site, the quantity *d* is calculated as 2.5 miles divided by the 10-mile radius of the circle to produce a value of 0.25.

Using all of the information discussed above, the acreage of suitable foraging habitat required in the Study Area to support the regional SWHA population (*Y*) can be calculated using Equation 2:

$$Y = n \cdot 6{,}820 \cdot p \cdot q \cdot r$$

where n is the number of SWHA nesting pairs in the regional population; 6,820 is the baseline average home range size; *p* is the adjustment for average home range overlap (1-average overlap); *q* is the proportion of the suitable habitat in the Study Area that is moderate- or high-quality habitat; and *r* is the weighted average overlap between the Study Area and the potential foraging area available to the regional population. The quantity *Y* can be subtracted from the total existing acreage of suitable foraging habitat in the Study Area; a positive result would indicate that there is a surplus of foraging habitat in the Study Area; a negative result would indicate that there is a deficit of foraging habitat in the Study Area.

2.2.3 Threshold of Significance

CEQA defines the significance of an impact on the SWHA based on the following relevant thresholds of significance:

- Appendix G of the State CEQA guidelines states that a biological resource impact is considered significant (before considering offsetting mitigation measures) if the lead agency determines that project implementation would result in "substantial adverse effects, either directly or through habitat modifications, on any species identified as being a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or [U.S. Fish and Wildlife Service]"; and
- CEQA Section 15065 (Mandatory Findings of Significance) states that a biological resource impact is considered significant if the project has the potential to "substantially reduce the number or restrict the range of an endangered, rare or threatened species".

Both of these thresholds are understood to mean something other than "take" of a single member of a species.

2.2.4 Impacts to SWHA Nests

Any impact from Project activities that results in abandonment or forced fledging of active nests, or otherwise results in take, as defined by CESA, of individual SWHAs would be considered a significant impact under CEQA.

2.2.5 Impacts to SWHA Foraging

Based on the above-referenced definitions, the Project could be considered to have a potentially significant impact to SWHA if it resulted in a reduction of available foraging habitat to below the amount required to sustain the regional population. If the Project would not result in such a deficit of suitable foraging habitat in the Study Area, the Project's impact would be considered less than significant under CEQA.

Because SWHA home ranges are different each year due to seasonal and annual changes in the crop matrix, it is difficult to predict or model the extent of the area likely to be used by a given pair of SWHAs over a period of years (Estep 2015). In addition, although the method used to estimate the acreage of available and required foraging habitat in the Study Area represents a robust and scientifically defensible analysis, it is necessarily dependent on a number of generalizations and assumptions. Therefore, the estimates in the study are only best approximations. In order to account for variation in the estimates due to interannual variation in the regional population caused by mortality and recruitment, allow for resilience in the population to environmental factors outside the scope of this analysis, and to account for other potential sources of error, the CEQA significance threshold should be set substantially higher than the minimum amount of foraging habitat required in the Study Area to sustain the regional population. For this analysis, the CEQA significance threshold was conservatively set at 70 percent of the existing surplus habitat. If the Project would result in the surplus of suitable foraging habitat in the Study Area being reduced to less than 70 percent of the existing surplus, the Project would be considered to have a significant impact on the regional population of SWHA under CEQA. This 70 percent threshold has been established by Estep as being adequate to provide a buffer of foraging habitat above the minimum number of acres needed (Estep 2015) and has been accepted by numerous CEQA lead agencies.

2.3 Data Acquisition and Processing

Data used in the analysis came from publicly available datasets, the results of other SWHA nest surveys conducted in the Project region, and data obtained during surveys performed for the Project in 2025.

2.3.1 Land Use Data

Land use data were taken from the 2023 U.S. Department of Agriculture (USDA) Crop Layer (USDA 2023). The data were downloaded on October 24, 2024. The data set provides land cover data at a resolution of 30 meters by 30 meters for the entire U.S. The data were clipped to the Study Area

boundary, and land cover types were characterized as suitable or unsuitable for SWHA foraging. Land cover data were adjusted for existing solar projects that were classified as their former agricultural use in the USDA data set, which resulted in a minor increase in the acreage of unsuitable foraging habitat as compared to what would be calculated only using the USDA Crop Layer data. Once all of the land in the Study Area was assigned as suitable or unsuitable for SWHA foraging, the suitable land cover types were then further classified as high-, moderate-, or low-quality foraging habitat. The habitat was classified according to a crosswalk derived from previous studies (Appendix A; Estep 2017, 2015; HELIX 2018, 2020; SBC 2023).

2.3.2 Swainson's Hawk Nest Data Desktop Review

Prior to initiating ground surveys, a desktop review was conducted to compile spatial data on all previously documented SWHA nests in the Study Area using publicly available data from the Fresno County Environmental Impact Reports that overlapped with the Study Area (County of Fresno 2024a). Previously documented SWHA nest locations in the Study Area were obtained from the following sources:

- A comprehensive ground survey performed in 2011 for SWHA nesting pairs within a 10-mile radius of the Tranquillity Solar project, located approximately 2 miles south of the Project (Estep 2011);
- A comprehensive ground survey of SWHA nests in the central San Joaquin Valley that included the Project site (Estep and Dinsdale 2012);
- A comprehensive ground survey performed in 2016 for SWHA nesting pairs within a 10-mile radius of the Scarlet Solar project, located approximately 1.5 miles southeast of the Project (Estep 2016);
- A reconnaissance ground survey performed in 2020 for SWHA nests within a 10-mile radius of the Luna Valley Solar project, located immediately south of the Project (HELIX 2020);
- A comprehensive ground survey performed in 2023 for SWHA nests within a 10-mile radius of the Darden Clean Energy project that includes some overlap within the Study Area (SBC 2023); and
- California Natural Diversity Database records.

The exact number of SWHA nest territories previously documented within the Study Area is impossible to determine as it is derived from a compilation of data spanning several years and is likely to contain duplicative nest accounts. Some pairs would be expected to have moved nest territories over their life span due to competition or natural causes such as high winds or branch or trunk failure causing pairs to relocate, potentially resulting in multiple nests for each pair over the span of the various studies. Similarly, it would be expected that some individuals would have perished while other new individuals would have arrived over the course of the various studies and new nests may have been constructed. As such, Tetra Tech used the previous nest observations to aid in a comprehensive ground survey to assess the presence of previously reported nests and to identify new nests within the Study Area.

2.3.3 Swainson's Hawk Nest Surveys

The Study Area, including the Project site and 10-mile radius, was surveyed from April 7-10, 2025, and May 5-6, 2025, to identify SWHA nesting territories. During the surveys, each biologist was equipped

with a tablet with the ArcGIS Field Maps application depicting the Project site and 10-mile buffer, as well as all previously documented SWHA nests. During the surveys, biologists used publicly accessible roadways in the Study Area to survey for nesting SWHA using a combination of windshield and pedestrian surveys and noted nests or nesting activity. Each potentially suitable nest tree and previously documented nest location was surveyed for raptor activity. Binoculars and spotting scopes were used to aid in the identification of bird species and/or potential nest locations. All identified nests, including those of other raptor species, were recorded in ArcGIS Field Maps. When potential stick nests were identified during the April survey but no raptor activity could be confirmed, the nest was revisited in May to document nesting activity.

2.3.4 Cumulative Projects

Data on other existing, planned, and reasonably foreseeable solar projects (cumulative projects) in the Study Area were obtained by reviewing the Fresno County Division of Public Works and Planning's Photovoltaic Facilities Processing webpage (County of Fresno 2024c). Cumulative projects were classified as constructed or proposed for purposes of analysis.

3.0 RESULTS

3.1 Land Use Data

A total of 30 SWHA nests were documented within the Study Area which may potentially be directly or indirectly affected by construction of the Project (Figure 1). The distribution of SWHA nest territories is fairly even throughout the Study Area, although there is a noticeable concentration of SWHA nests in the northeastern and eastern section of the Study Area within the Fresno Slough and Mendota Wildlife Area (Figure 1).

A total of 140,347 acres (52.84 percent) of suitable foraging habitat were identified in the Study Area; the remaining 125,251 acres (47.16 percent) contained unsuitable land uses for foraging (Figure 2). The majority of the suitable foraging habitat is in the central portion of the Study Area. Of the suitable foraging habitat in the Study Area, 4,276 acres (1.61 percent) were high-quality, 122,396 acres (46.08 percent) were moderate-quality, and 13,675 acres (5.16 percent) were low-quality (Figure 3). Overall, 90.3 percent of the suitable foraging habitat was high- or moderate-quality habitat. The foraging habitat within the Study Area is summarized in Table 1.

Table 1. Swainson's Hawk Foraging Habitat Within the Study Area

Foraging Habitat Type	Area (acres)	Percent of Total
Suitable Habitat	140,347	52.84
High Quality Habitat	4,276	1.61
Moderate Quality Habitat	122,396	46.08
Low Quality Habitat	13,675	5.15
Unsuitable Habitat	125,251	47.16
Total	**265,598**	**100.0**

3.2 Swainson's Hawk Nest Data

The regional SWHA population that would potentially be affected by the Project includes 30 nesting pairs in a 265,598-acre (approximately 415 square miles) Study Area (Figure 1), which equates to a density of 0.072 nesting territory per square mile. Of the 30 SWHA nests identified, 3 nests (10.0 percent) were within a 1-mile radius of the Project site, and 21 nests (70 percent) were located over three miles from the Project site (Figure 4). The approximate overlap of the potential foraging area and the Study Area was calculated for each nest using Equation 1. The weighted average overlap of all nests (*r*) within the Study Area was 0.66 (Table 2), meaning that roughly 66 percent of the foraging habitat required for the regional population is within the Study Area (Table 2).

Table 2. Proportion of Potential Foraging Area Inside the Study Area

Distance Increment (miles)	Number of Nests	Proportion of Overlap
0-1	3	0.968
1-2	2	0.905
2-3	4	0.841
3-4	1	0.778
4-5	4	0.716
5-6	1	0.654
6-7	3	0.594
7-8	2	0.534
8-9	7	0.476
9-10	3	0.419
Weighted Average		**0.66**

Using the results discussed above, the total acreage of foraging habitat required in the Study Area to sustain the regional population of SWHA was calculated using Equation 2:

$$Y = 30 \cdot 6{,}820 \cdot 0.6 \cdot 0.903 \cdot 0.66 = 73{,}163$$

Where 30 is the size of the regional population (*n*); 6,820 is the baseline average home range size; 0.6 is the correction for 40 percent overlap among home ranges (*p*); 0.903 is the proportion of the suitable foraging habitat in the Study Area that is moderate or high quality (*q*); and 0.66 is the weighted average proportion of potential foraging area for all nest territories in the regional population that is inside the Study Area (*r*).

The total amount of suitable foraging habitat in the Study Area required by the regional SWHA population (30 pairs) was calculated to be 73,163 acres. The total amount of suitable foraging habitat in the Study Area is 140,347 acres. The Study Area contains approximately 140,347 acres, which is the minimum required for this population plus an additional 67,184 acres of surplus suitable foraging habitat. For purposes of this study, the CEQA significance threshold is 70 percent of the existing surplus, or 47,029 acres (Table 3).

Table 3. Project Impacts and CEQA Significant Threshold

	Area Existing Within Study Area (Acres)	Project Impacts (2,362 acre)	Percent of Existing	Cumulative Impacts[1] (5,036 acre)	Percent of Existing
Foraging Habitat Required	73,163	--	--	--	--
Suitable Foraging Habitat	140,347	137,985	98.3	132,949	94.7
Surplus	67,184	64,822	96.5	59,786	89.0
CEQA Significance Threshold	47,029	--	--	--	--
Less than Significant Impact[2]/Surplus Remaining After Project	20,155	17,793	88.2	12,757	63.3

[1] Acreage of all existing, planned, or reasonably foreseeable solar projects within the Study Area that provide suitable foraging habitat for Swainson's Hawk (see discussion in *Cumulative Impacts*)
[2] Impact acreage that would be below the CEQA threshold significance, or 67,184 – 47,029 = 20,155 or 67,184 x 0.3 = 20,155

3.3 Impacts to Foraging Habitat

3.3.1 Project-Level Impacts

The proposed Project would result in conversion of 2,362 acres of undeveloped lands in the Study Area into a solar PV facility. For purposes of this analysis, solar facilities are considered a land use unsuitable for SWHA foraging. Removal of 2,362 acres of habitat would reduce the surplus SWHA foraging habitat in the Study Area to 67,184 acres, which is 96.5 percent of the existing surplus, and well above the 70 percent CEQA significance threshold (Table 3). The Project impact to the regional SWHA population through foraging habitat loss would be less than significant, and no compensatory mitigation for impacts to foraging habitat would be required.

3.3.2 Cumulative Impacts

In addition to a Project-specific assessment, CEQA also requires that a cumulative assessment be conducted to determine whether the Project's incremental impacts are cumulatively considerable when added to other past, present, and reasonably foreseeable future actions. For purposes of this assessment, the cumulative impact is defined as all existing planned and proposed solar energy projects within the roughly 10-mile radius Study Area (Figure 5). It does not include other types of projects or other land use changes that would potentially remove or modify SWHA. When considering total project acreage, solar energy projects comprise the majority of planned and proposed non-agricultural projects in the Study Area that could impact SWHA foraging habitat.

Including the proposed Project, there are approximately 13 existing, planned, or reasonably foreseeable solar projects in the Study Area (Figure 5). It is worth noting that solar projects in the Study Area that have already been constructed (i.e., existing) were classified as developed lands during the quantification of suitable or unsuitable SWHA foraging habitat and therefore, existing solar projects are already depicted as unsuitable habitat and are not included in the cumulative analysis (Figures 2 and 6). The total area of solar projects that are proposed (i.e., not constructed) is 5,311 acres, of which 5,036 acres are considered suitable foraging habitat and 275 acres are considered

unsuitable foraging habitat (Figure 6). Therefore, an additional 5,036 acres of suitable SWHA foraging habitat would be impacted by cumulative solar projects evaluated in this analysis (Figure 6; Table 3).

When considering development of the cumulative projects, the surplus SWHA foraging habitat in the Study Area would be reduced to 59,786 acres (conservatively assuming 100 percent impact for these projects), which is 89.0 percent of the existing surplus and above the 70 percent CEQA significance threshold (Table 3). Therefore, the Project would contribute to a less than significant cumulative impact to the regional population of SWHA through foraging habitat loss, and no compensatory mitigation would be required for cumulative impacts.

4.0 DISCUSSION/CONCLUSION

The analysis performed for this study is based on previously accepted methods (Estep 2011, 2015 2017; HELIX 2018, 2020; SBC 2023) and makes use of the best available data. The analysis considers impacts to SWHA at a more biologically realistic scale than the method employed in the 1994 CDFW guidelines while remaining logistically feasible as well as generalizable to a wide range of projects and locations. The proposed Project would not result in a significant reduction (based on the significance threshold and assessment methods used here) of available SWHA foraging habitat at either the Project or cumulative level. Per the results of this analysis, no compensatory mitigation should be required as per CEQA guidance.

The proposed Project would not result in a significant impact to the regional population of SWHA through loss of suitable foraging habitat at the Project level, nor would it contribute to a significant cumulative impact in concert with other planned or reasonably foreseeable solar projects. After Project development, the amount of surplus suitable foraging habitat for SWHA in the Study Area would remain greater than 70 percent of the existing surplus at both the Project and cumulative level, and therefore provide sufficient surplus foraging habitat to allow for population growth and resiliency to disturbance, as well as to changes to the foraging landscape through changes in agricultural land uses.

The loss of 2,362 acres of undeveloped agricultural land will not affect the distribution or abundance of nesting SWHAs in the Study Area. Because it represents only 1.7 percent of the available foraging habitat within the Study Area, its conversion is negligible relative to availability, and particularly with regard to the relatively small number of SWHAs that nest in the Study Area. The loss of 2,362 acres of undeveloped agricultural land would not result in a significant reduction (based on the significance threshold and assessment methods used here) of available SWHA foraging habitat at either the project or cumulative level. Per the results of this analysis, no mitigation should be required per CEQA guidance.

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech) has prepared this Burrowing Owl Survey Report for the proposed Heartland Solar Project (Project) in western Fresno County, California. This report describes the burrowing owl (BUOW, *Athene cunicularia*) survey methodology and results conducted for the Project during the 2024-2025 winter season and 2025 breeding season.

2.0 PROJECT DESCRIPTION AND LOCATION

The Project site is approximately 2,362 acres and is located in unincorporated western Fresno County, approximately 6.5 miles south of the city of Mendota and immediately west of State Route 33 (Figure 1). Heartland Solar 1, LLC, a wholly-owned indirect subsidiary of Clearway Energy Group, proposes to construct, operate, maintain, and decommission a photovoltaic solar energy-generating facility, onsite solar facility substation, onsite energy storage system, and associated infrastructure that would produce up to 300 megawatts. The Project site includes an approximately 5-mile-long generation-tie (gen-tie) line that would interconnect to the nearby Pacific Gas and Electric Company's Tranquillity Switching Station. Approximately 2 miles of the 5-mile-long gen-tie line would occur outside the solar site boundary (Figure 2).

The Project site is within the Coit Ranch United States Geological Survey 7.5-minute topographic quadrangle with the Project site centroid located at approximately 36.6395°, -120.3999°. The Project site has historically been used for dry-farmed agriculture for grain or forage crops, has remained fallow, or has undergone routine discing for approximately the last 10 years. Abandoned irrigation and drainage features are present throughout the Project site but are not in use. Unimproved farm roads exist on the Project site between the Project parcels. Surrounding land uses consist of non-irrigated fields used for dry farming, grazing, or fallow rotations, orchards, and multiple solar facilities.

3.0 METHODOLOGY

A focused habitat assessment and burrow survey, as well as winter season and breeding season protocol surveys, were conducted in accordance with the guidelines stated in the *Burrowing Owl Survey Protocol and Mitigation Guidelines* (The California Burrowing Owl Consortium 1993) and the *Staff Report on Burrowing Owl Mitigation* (CDFG 2012). The habitat assessment and burrow survey occurred in December 2024, the winter season protocol surveys occurred on December 11 and 12, 2024, and January 7 and 8, 2025, and the breeding season protocol surveys occurred on April 9, 2025, May 5 and 27, 2025 and June 19, 2025.

The Survey Area totals approximately 3,172 acres, which encompasses the Project fence line (i.e., disturbance limits), gen-tie line, and a 150-meter buffer.

3.1 Habitat Assessment and Burrow Survey

Prior to the habitat assessment and burrow survey, biologists reviewed the California Department of Fish and Wildlife California Natural Diversity Database (CDFW 2024) for nearby occurrences of BUOW as well as aerial and historical imagery (Google Earth 2024) of the Survey Area.

The habitat assessment and burrow survey were conducted in December 2024 by Tetra Tech biologists. As part of the habitat assessment, biologists familiar with the species and its ecology assessed the Survey Area for habitat characteristics known to be important to BUOW (i.e., vegetation structure, density, and height; signs of occupation by California ground squirrels [*Otospermophilus beecheyi*]; presence of burrows or burrow surrogates; and presence of prey such as small mammals). Biologists drove in vehicles at low speeds around the entire Project perimeter and through accessible roads through the center of the Project site to evaluate habitat and visually scan for BUOW within the Survey Area.

During the burrow survey, biologists surveyed areas of suitable habitat within the Survey Area for existing burrows and live BUOWs by walking approximate 10-meter (33-foot) transects. Areas within the 150-meter buffer were also surveyed by walking 10-meter transects where access was granted. In areas outside of the Project site, but within the 150-meter buffer, where access was not granted for (i.e., adjacent private property), the surveyors visually scanned for BUOWs with binoculars. With this method, 100 percent visual coverage of BUOW suitable habitat within the Survey Area was achieved.

During the burrow survey, it was determined whether burrows and burrow surrogates were suitable for use by BUOW and any evidence of BUOW occupation, including live BUOWs, pellets, feathers, and whitewash, was noted. In general, a burrow was considered suitable for BUOW if it was equal to or greater than 11 centimeters (cm) or 4.3 inches in diameter (height and width) and 150 cm (59 inches) in depth (Johnson et al. 2010). Burrows encountered during the burrow survey were assigned into one of the following categories and are described below: burrow with sign, existing burrow, or other.

- Burrow With Sign: A burrow or burrow surrogate where a live BUOW was observed or that shows sign of BUOW occupancy. Examples of BUOW sign may include whitewash, feathers, pellets, prey remains, or eggshell fragments.
- Existing Burrow: Burrows that were determined to be suitable for BUOW use based on the characteristics of the burrow (i.e., diameter of entrance, depth, accessibility). No live BUOW or their sign was observed at existing burrows.
- Other: Burrow surrogates that were determined to be suitable for BUOW use based on the characteristics of the surrogate (i.e., diameter of entrance, depth, accessibility). Examples of potential burrow surrogates are man-made structures such as pipes, culverts, debris piles, or other various openings that met the size criteria stated above.

Surveys were conducted during optimal weather conditions (i.e., no heavy rain or fog) to allow for the greatest visibility possible. All burrows observed during the habitat assessment and burrow survey were checked for sign of BUOW.

Burrows with sign, existing burrows, and other burrows (i.e., surrogate burrows) observed during the burrow survey were mapped using Esri ArcGIS Field Maps on a tablet or phone paired with a sub-meter accuracy Global Positioning System device.

3.2 Protocol Surveys

3.2.1 Winter Season Survey

Winter season surveys were performed on December 11 and 12, 2024, and January 7 and 8, 2025. During these surveys, all previously mapped burrows and locations where live BUOWs were encountered during the burrow survey were visited during the timeframe of 2 hours before sunset to evening civil twilight or from morning civil twilight to 10:00 AM (CDFG 2012). To the maximum extent feasible, burrows were observed using binoculars to minimize disturbance if BUOW individuals were present. Surveys were not conducted during heavy rain, high winds greater than 20 miles per hour, or dense fog. Any BUOW or BUOW sign, possible predators present, and any evidence of predation of BUOWs were noted.

3.2.2 Breeding Season Survey

Breeding season surveys were performed during the 2025 breeding season on April 9, May 5, May 27, and June 19. The same methodology for winter season surveys described above was performed during the breeding season surveys.

4.0 RESULTS

This section describes the results of the habitat assessment and burrow survey, as well as the winter season and breeding season surveys that occurred for the Project.

4.1 Habitat Assessment and Burrow Survey

During the habitat assessment, all the fields within the Project site were recently disced, removing any standing vegetation and leaving shallow furrows in the soil. When vegetation was present in the disced fields, it consisted of dense patches of non-native Russian thistle (*Salsola* sp.) and saltbush (*Atriplex* sp.), and still showed evidence of recent discing and shallow furrows in the soil. The Project site also supports two eucalyptus (*Eucalyptus* spp.) groves with remnant grassland patches composed of non-native grasses that create a dense thatch layer over the ground surface. The majority of the Project site was not suitable for use by burrowing mammals, and thus BUOW burrows, due to the routine disturbances. The Project site may still be used by foraging BUOWs.

Outside of the Project fence line (i.e., disturbance limits), but within the 150-meter survey buffer, are two drainage basins consisting of bare ground and non-native grassy and ruderal vegetation. These drainage basins are located adjacent to South Ohio Avenue between where it intersects with West American Avenue and West Lincoln Avenue, and adjacent to South Derrick Avenue between where it intersects with West Lincoln Avenue and West Adams Avenue. Evidence of ground squirrel activity was observed within these drainage basins, and multiple existing burrows that may be suitable for BUOW use were identified. In addition, multiple culverts and irrigation pipes were present within the 150-meter survey buffer that could be used by individual BUOWs. These areas were considered suitable for BUOW use at the time of the habitat assessment.

Over the course of the winter and breeding season surveys, these habitat conditions remained largely unchanged from the time of the habitat assessment. The fields within the Project site showed

evidence of recent discing and were unsuitable for burrowing mammals, and evidence of ground squirrel activity was limited to the drainage basins described above.

During the burrow survey, biologists mapped all burrows or surrogate burrows within areas identified as suitable habitat. A total of 24 burrows with sign, 207 existing burrows with no sign, and 36 surrogate burrows, for a total of 267 burrows or surrogate burrows, were mapped within the Survey Area during the survey efforts. Of these, one burrow with sign and one existing burrow were mapped within the Project fence line. The remaining observation were outside of the Project fence line, but within the 150-meter survey buffer. During the burrow survey, most of the burrows identified were found within the two drainage basins adjacent to South Ohio Avenue and South Derrick Avenue that based on current design are anticipated to remain undisturbed by Project activities.

Table 1 summarizes the findings of the burrow survey. Figure 3 depicts the locations of all burrows identified during the burrow survey and Figure 4 depicts the location of all burrows with sign. Appendix A contains representative photographs from the surveys and Appendix B lists details associated with each burrow identified during the burrow survey.

Table 1. Summary of Burrows Survey

Burrow Status	Number Observed
Burrow with Sign	24
Existing Burrow	207
Other (i.e., surrogate burrow)	36
Total	**267**

4.2 Protocol Surveys

4.2.1 Winter Season Survey

Protocol winter season surveys were performed on December 11 and 12, 2024 (surveys 1 and 2), and January 7 and 8, 2025 (surveys 3 and 4). During these surveys, all previously mapped burrows were visited. All individual BUOW observed during the protocol surveys were associated with previously identified burrows with sign. During the protocol surveys, all individual BUOW observations occurred outside of the Project fence line but within the 150-meter survey buffer except for a single BUOW during protocol survey 1 that was observed at a burrow with sign within the Project fence line. No BUOWs were observed foraging within the Survey Area during the protocol surveys.

During surveys 1 and 2, up to eight individual BUOWs were observed in association with burrows. Of these, one BUOW was observed during survey 1 at Burrow ID 4, which was located within the Project fence line (Figure 4). During surveys 3 and 4, up to four individual BUOWs and six individual BUOWs, respectively, were observed in association with burrows. All observations of individual BUOWs during surveys 3 and 4 occurred outside of the Project fence line but within the Survey Area. Table 2 summarizes the protocol winter season surveys and results. Figure 4 depicts the location of burrows with sign identified during the winter season protocol survey. Additional notes on the burrows identified during the burrow survey with distinct Burrow IDs are provided in Appendix B.

During all four protocol surveys, all individual BUOW observations occurred at 13 distinct burrows with sign. However, as shown on Figure 4, a total of 24 burrows with sign were documented during the survey with many burrows with sign in proximity to other burrows with sign. This indicates that a given individual BUOW is likely using one or more burrows within the Survey Area and this is why there is also uncertainty around the number of individual BUOW that could be present. It has been conservatively assumed that each BUOW observed for each survey was a unique individual instead of the same individual being observed multiple times.

Table 2. Summary of Winter Season Survey

Survey	Date and Time	Weather Conditions[1]	Biologists	Survey Results	Live BUOW Occurrences
Protocol 1	12/11/2024 2:45 p.m.–4:38 p.m.	57-60°F, 0-5 mph wind, 15-25% cloud cover	Jack Gordon, Ari Naiman, and Lauren Jennings	Eight BUOWs observed. One BUOW observed within the Project fence line and seven BUOWs were observed outside of the Project fence line but within the 150-meter buffer.	Burrow IDs: 1, 2, 3, 4, 5, 6, 8, and 14.
Protocol 2	12/12/2024 3:05 p.m.–4:50 p.m.	55-57°F, 0-5 mph wind, 50-70% cloud cover	Jack Gordon, Ari Naiman, and Lauren Jennings	Eight BUOWs observed outside of the Project fence line but within the 150-meter buffer.	Burrow IDs: 3, 7, 8, 14, 16, 19, 94, and 117.
Protocol 3	1/7/2025 3:00 p.m.–4:52 p.m.	60-64°F, 10-15 mph wind, 20-40% cloud cover	Jack Gordon, Ari Naiman, and Lauren Jennings	Four BUOWs observed outside of the Project fence line but within the 150-meter buffer.	Burrow IDs: 1, 3, 5, and 7.
Protocol 4	1/8/2025 3:00 p.m.–5:01 p.m.	56-62°F, 0-5 mph wind, 0-10% cloud cover	Jack Gordon and Ari Naiman	Six BUOWs observed outside of the Project fence line but within the 150-meter buffer.	Burrow IDs: 1, 2, 5, 6, 8, and 19.

1/ °F = degrees Fahrenheit, mph = miles per hour

4.2.2 Breeding Season Survey

Protocol breeding season surveys were performed on April 9, May 5, May 27, and June 19, 2025. During these surveys, all previously mapped burrows were visited. No live individual BUOW were observed during the breeding season surveys, and no new sign which may indicate BUOW presence during the breeding season was observed. Table 3 summarizes the protocol breeding season surveys and results.

Table 3. Summary of Breeding Season Survey

Survey	Date and Time	Weather Conditions[1]	Biologists	Survey Results	Live BUOW Occurrences
Protocol 1	4/9/2025 6:47 a.m.–8:42 a.m.	50-53°F, 0-5 mph wind, 0% cloud cover	Jack Gordon and Lauren Jennings	All identified burrows were visited. No BUOW individuals were observed.	None
Protocol 2	5/5/2025 5:48 p.m.–7:37 p.m.	80-52°F, 5-10 mph wind, 0% cloud cover	Jack Gordon and Lauren Jennings	All identified burrows were visited. No BUOW individuals were observed.	None
Protocol 3	5/27/2025 7:38 a.m.–9:31 a.m.	63-66°F, 0-5 mph wind, 0% cloud cover	Jack Gordon	All identified burrows were visited. No BUOW individuals were observed.	None
Protocol 4	5/5/2025 6:40 a.m.–8:15 a.m.	70-74°F, 5-10 mph wind, 0% cloud cover	Jack Gordon	All identified burrows were visited. No BUOW individuals were observed.	None

1/ °F = degrees Fahrenheit, mph = miles per hour

5.0 CONCLUSION

Most of the Project site has been subject to agricultural disturbance in the form of agricultural production and discing, for several years preceding the surveys. The repeated ground disturbance collapses burrows and discourages colonization by California ground squirrels and BUOW and has resulted in the vast majority of the Project site being unsuitable for BUOW burrows. Around the disced areas of the Project site, remnant grassland patches are composed of non-native grasses that create a thatch layer over the ground surface, further reducing suitability for BUOW. In areas not routinely subject to disturbance, suitable burrows for BUOW are present, but these areas are largely covered with non-native grassy and ruderal vegetation and provide low quality habitat for BUOWs. These areas are mainly outside of the Project fence line (i.e., disturbance limits), but within the 150-meter survey buffer. Additionally, there are many culverts and irrigation pipes in the vicinity of the Project site, all of which may provide suitable shelter to overwintering BUOWs.

During the surveys, all but one of the burrows with documented sign occur outside of the Project fence line. As shown on Figure 4, these burrows occur in the drainage basins adjacent to South Ohio Avenue between where it intersects with West American Avenue and West Lincoln Avenue, and adjacent to South Derrick Avenue between where it intersects with West Lincoln Avenue and West Adams Avenue. It is likely that individual BUOWs are using one or more burrows in these areas.

The results of the habitat assessment and winter season protocol survey indicate that the Project vicinity supports BUOW during the overwintering season. It is likely that the Project site only has few BUOWs present during the overwintering season and that each individual utilized multiple burrows. BUOW or new sign were not observed during the 2025 breeding season survey, indicating that the Project site and vicinity likely does not support a breeding BUOW.

Ruben Barrios, Tribal Chairman
Santa Rosa Rancheria Tachi Yokut Tribe
Cultural Department
PO Box 8
Lemoore, CA 93245

Subject: Tribal Cultural Resources under the California Environmental Quality Act, AB 52 (Gatto, 2014). Formal Notification of Determination that a Project Application is Complete or Decision to Undertake a Project, and Notification of Consultation Opportunity, pursuant to Public Resources Code § 21080.3.1 (hereafter PRC).

Dear Mr. Barrios:

The County of Fresno is acting as the Lead Agency in the preparation of Environmental Impact Report 7564, Conditional Use Permit (CUP) Applications No. 3630 and 3631, and Variance Application No. 4122.

Under California state law, the project is subject to the California Environmental Quality Act (CEQA), and the County may have to prepare an environmental document consisting of an Environmental Impact Report.

State law under Assembly Bill 52 (PRC Section 21080.3.1) allows California Native American tribes 30 days to request consultation regarding possible significant effects that implementation of the proposed project may have on tribal cultural resources. The request must be in writing to the County of Fresno and must identify a lead contact person. The County will begin the consultation process within 30 days of receiving the tribe's request for consultation. The consultation may include a discussion concerning the type of environmental review necessary for the project, the significance of tribal cultural resources discovered, the significance of the project's impacts on tribal cultural resources, and, if necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend.

A copy of the agency routing package prepared for the subject proposal is enclosed with this letter which includes the project description and a map showing the project location. The point of contact for this project is given below.

Pursuant to PRC § 21080.3.1(b), you have 30 days from the receipt of this letter to request consultation, in writing, with the County of Fresno.

You may contact me at MParker@fresnocountyca.gov or call me at (559) 600-9669 should you have any questions regarding this letter.

Sincerely,

Marissa Parker, Planner
Development Services and Capital Projects Division

Very helpful – thanks so much! At this point, does the County consider the formal consultation process under AB 52 to be closed? We will be reaching out to Tribes as part of the CEQA process should they or their members decide to participate in the CEQA process, but that would be separate from the AB 52 process. Thanks for your efforts on the distribution list – the progress sounds great all the way around.

SECTION 1.0
Executive Summary

Environmental Science Associates (ESA) compiled this executive summary using excerpts from the Phase I environmental site assessment report that follows. This executive summary may not provide all the information necessary to fully characterize the site and gain an understanding of the issues, nor does it detail the Phase I assessment and its findings. ESA does not recommend relying solely on this executive summary.

This Phase I environmental site assessment was conducted on behalf of the Fresno County Department of Public Works and Planning, Development Services and Capital Projects Division (Fresno County) for the Heartland Hydrogen Project (see **Figure 1, Project Area**). Heartland Hydrogen, LLC and Heartland Solar 1, LLC propose to generate hydrogen fuel from renewable sources including solar photovoltaic (PV) power and treated wastewater. The hydrogen facility, solar facility, and water treatment facility together constitute the Heartland Hydrogen Project (Project). The treated wastewater would be generated from a tertiary wastewater treatment facility that would be constructed at the south end of the existing Mendota Wastewater Treatment Plant (Mendota WWTP) in the City of Mendota to produce recycled water for hydrogen fuel production (see **Figure 2, Proposed Mendota Wastewater Treatment Facility**). The hydrogen fuel production facility would be powered by solar energy. Both the hydrogen facility and the solar facility would be constructed on property currently owned by the Westlands Water District that is located about nine miles south of the wastewater treatment facility (see **Figure 3, Proposed Solar Energy Generation and Hydrogen Fuel Production Facilities**). The wastewater treatment facility site and the solar and hydrogen facilities site are collectively the subject properties.

This Phase I assessment was conducted in general accordance with guidance from the American Society of Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property* (ASTM E2247-16), and 40 Code of Federal Regulations (CFR) Section 312.1, "*Purpose, Applicability, Scope and Disclosure Obligations*." This Phase I environmental site assessment was conducted to identify Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs) at the subject properties (see Section 2.1 for definitions).

A commercial government records database service searched relevant federal, State, and local regulatory agency lists for listings of the subject properties assessed in this report, and for nearby properties within the appropriate ASTM 2247 standard search distances. In addition, regulatory agency websites were checked to provide additional information. The records search returned nine listings. All but one of the listings at or near the subject properties are not considered able to affect the subject properties. **The search of government regulatory records and other records did not reveal any RECs or CRECs. The Britz Fertilizers Property, located within the proposed solar facility, is considered an HREC because the spill at this location has been cleaned up to the satisfaction of the overseeing regulatory agency.**

The subject properties were inspected on April 29 and September 30, 2022. The proposed wastewater treatment facility site has a dried sludge pile, a sewage lift station, and a solar panel array (see Figure 2). **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

The proposed solar and hydrogen facilities site consists mostly of fallow or recently plowed farmland; no active farming was observed. Three areas, referred to as Dump Areas 1, 2, and 3, have been used for the illegal dumping of a light truck, a drum of used motor oil, refrigerators, microwaves, toilets, mattresses, tires, empty buckets and bottles, broken-up furniture and lumber, children's toys, rugs, household trash, empty boxes, dead sheep, and miscellaneous debris and trash (see Figure 3). The discarded debris and trash are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill. The one drum of motor oil could be recycled at any oil recycler. There were no observations of underground or aboveground storage tanks, waste ponds, unusual odors, or stressed vegetation. Occasional small areas of stained soil were observed but are considered a *de minimus* condition because the staining was not extensive or deep. Minor oil staining was observed on wood supports for an inactive drain sump pump but are considered a *de minimus* condition because no oil staining was observed on the adjacent soil and the adjacent vegetation was not stressed. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

The city manager for the City of Mendota was interviewed regarding the history of the proposed Mendota wastewater treatment property. **The results of the interview are incorporated into this Phase I assessment and did not indicate any RECs, HRECs, or CRECs.**

Fresno County provided a 2019 Phase I environmental site assessment as user-provided information for the proposed solar and hydrogen fuel production facilities. Westlands Water District either dry farms or leaves the proposed hydrogen fuel production subject property fallow. None of the existing irrigation infrastructure is in active use. Prior to Westlands acquiring the subject property in 2003, it was farmed primarily for cotton. An environmental lien search indicated there were no environmental liens or land use limitations associated with the subject property. **The results of the interview information did not indicate any RECs or CRECs. The prior Phase I assessment corroborated the previously noted Britz Fertilizers property, located at the proposed hydrogen fuel production facility, as an HREC.**

SECTION 2.0
Introduction

2.1 Purpose, Standards, and Definitions

On behalf of Fresno County, Environmental Science Associates conducted a Phase I environmental site assessment for the Heartland Hydrogen Project in Fresno County, California (collectively, the subject properties) (see Figure 1, *Project Area*).

This Phase I assessment was conducted in general accordance with the American Society of Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Properties* (ASTM E2247-16) (ASTM 2016) and the U.S. Environmental Protection Agency (EPA) Final Rule regarding Standards and Practices for All Appropriate Inquiries (70 *Federal Register* [FR] 66070, May 1, 2005; 40 Code of Federal Regulations [CFR] Part 312) (AAI Rule). EPA has stated that the ASTM E2247-16 is consistent with the AAI Rule (82 FR 28040, June 20, 2017). Specifically, this final rule amends the AAI Rule at 40 CFR Part 312 to reference ASTM E2247-16 and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the AAI Rule.

The purpose of this Phase I assessment is to inform the County of Fresno's consideration of the potential environmental impacts of the proposed project, in part by evaluating the potential for Recognized Environmental Conditions (RECs) at the subject properties. Three types of RECs are defined by ASTM E2247-16, as listed below. The term *Recognized Environmental Conditions (RECs)* means:

> (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

In addition, the ASTM standard defines the two categories cited below.

The term *Historical Recognized Environmental Conditions (HRECs)* means:

> A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

For a past REC to be considered an HREC, it must:

- Have already been remediated (or meet current standards without remediation);
- Not require use restrictions or engineering controls (e.g., cap, subslab depressurization system); and
- Meet current standards.

If the REC has use restrictions or engineering controls, the REC may be designated as a Controlled Recognized Environmental Condition (CREC), as defined below. Unlike HRECs, a CREC will be listed in the conclusions section of the Phase I assessment, along with other RECs. The purpose of this new category is to bring continuing obligations, such as use restrictions, maintenance requirements, and reporting requirements, to the forefront. The term *CREC* means:

> A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

RECs, HRECs, and CRECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. In addition, business environmental conditions (e.g., subsurface crude oil pipelines) are noted but not considered RECs, HRECs, or CRECs.

The ASTM Standard practice also defines a “business environmental risk” as a risk that can have a material environmental impact on the planned use of a property.

2.2 Scope of Services

The following sections describe ESA's work scope:

- Section 2.0, *Introduction*, discusses the purpose for performing the Phase I assessment; the standards and definitions used for the Phase I assessment; and significant assumptions and limitations.

- Section 3.0, *Site Description*, provides general information concerning the location, description, and current and proposed uses of the subject properties, along with a description of any structures and improvements at the time of ESA's assessment.

- Section 4.0, *Records Review*, includes ESA's review of various databases available from federal, State, and local regulatory agencies regarding hazardous materials use, storage, or disposal within or near the subject properties considered in this assessment. Copies of relevant documents are included in the appendices of this report. Physical setting sources such as topography, soil, and groundwater conditions are described.

- Section 5.0, *Site Reconnaissance*, describes ESA's observations during reconnaissance of the subject properties. The methodology used and limiting conditions are described.

- Section 6.0, *User-Provided Information*, documents information provided by the interviews conducted with the owner or property manager.

- Section 7.0, *Findings and Opinions*, presents ESA's findings and professional opinions regarding the information contained in this report. It provides ESA's conclusions regarding the presence of RECs connected with the subject properties and data gaps, if any, that could affect the recognition of RECs.

- Section 8.0, *Report Authors and Qualifications*, provides the signatures and qualifications of the report authors.

- Section 9.0, *References*, is a summary of the resources used to compile this report that supplement the information provided in the appendices.

- The appendices contain certain pertinent documentation regarding the subject properties. Appendices A and B contain the report of regulatory agency database search results, as well as historical aerial photographs and historical topographic maps, City directories and fire insurance maps were not ordered because such records would not be produced for these rural properties.

2.3 Limitations and Exceptions

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with a property. Conformance of this Phase I assessment with ASTM E2247-16 reduces, but does not eliminate, uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with the subject property. While ESA has made every effort to discover and interpret available historical and current information on the property assessed within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information, and cannot be considered wholly conclusive. This report and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied. No other warranty is expressed or implied. ASTM E2247-16 is included in this report by reference.

This Phase I assessment is based primarily on historical research, a database review, and a site reconnaissance of accessible areas. This Phase I assessment does not include "non-scope issues" as specified by ASTM E2247-16, such as surveys for the presence of the following items on or in the vicinity of the subject property: asbestos-containing materials, polychlorinated biphenyls (PCBs), radon, effects on indoor air quality, lead-based paint, lead in drinking water, industrial hygiene, health and safety, regulatory compliance, and high-voltage lines.

The conclusions presented are professional opinions based solely upon indicated data described in this report, visual site and vicinity observations, and the interpretation of the available historical information and documents reviewed, as described in this report. Unless ESA has actual knowledge to the contrary, information obtained from interviews or provided to ESA is assumed to be correct and complete. ESA does not assume any liability for information that was misrepresented to ESA by others or for items not visible, accessible, or present on the parcel during the time of the site reconnaissance. The conclusions are intended exclusively for the purpose outlined herein and the site location and project indicated. Any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the user.

Opinions and recommendations presented herein apply to the site conditions existing at the time of this Phase I assessment and cannot necessarily apply to site changes of which ESA is not aware and has not had the opportunity to evaluate. Changes in the conditions of the parcel may occur with time due to natural processes or the works of man on the property or adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond ESA's control. Opinions and judgments expressed herein are based on ESA's understanding and interpretation of current regulatory standards, and should not be construed as legal opinions.

SECTION 3.0
Site Description

3.1 General Setting and Location

The subject properties consists of a portion of the City of Mendota wastewater treatment facility and some Westlands Water District agricultural property in Fresno County, as shown on Figures 1, 2, and 3, and as described below:

- The City of Mendota wastewater treatment facility portion of the subject properties is located within the City's existing wastewater treatment plan at 2699 Bass Avenue. The city zoning for this property is Public Facilities (P-F). Assessor's parcel numbers (APN) include all of 01305073ST (dried sludge pile); 01305058ST (lift station); 01305068ST (solar panels and north to south road).

- The Fresno County agricultural portion of the subject properties is generally bounded by West American Avenue to the north, an unnamed road to the west, Manning Avenue to the south, and State Route 33 (also referred to as South Derrick Avenue) to the east. The county zoning for this area is Exclusive Agricultural, 20-acre minimum parcel size (AE-20). APN numbers include 028-140-32ST, 028-140-36ST, 028-140-37ST, 028-140-23TT, the eastern half of 028-140-38ST, 028-170-42ST, 028-170-44ST, 028-170-46ST, 028-170-61ST, 028-170-48ST, 028-170-60ST, 028-060-32ST, 028-170-41ST, 028-170-43ST, 028-170-45ST, 028-170-47ST, 028-170-17TT, 028-170-18TT, 028-060-33ST, 028-060-41ST, 028-160-20ST, 028-160-22ST, 028-160-19ST, 028-160-16ST, and 028-160-17ST.

3.2 Current and Proposed Land Uses

The proposed wastewater treatment facility is within the boundaries of the existing Mendota WWTP, a sewage treatment facility. The proposed project would construct a tertiary treatment facility at the southern end of the property to provide recycled water for the hydrogen fuel production facility.

The proposed solar and hydrogen facilities are currently farmland that is fallow or recently plowed; no active farming was observed. A hydrogen fuel production facility powered by a solar energy generation facility would be constructed on this property.

SECTION 4.0
Records Review

The purpose of the records review is to obtain and examine records that could help to evaluate potential RECs, HRECs, and CRECs in connection with the subject properties. This section documents the database records search and the evaluation of other records, summarizes information provided by the property owners, and describes the physical setting of the subject properties.

4.1 Standard Environmental Record Sources

Federal, State, and local regulatory agencies publish databases of businesses and properties that handle hazardous materials or hazardous waste, including those properties with a known release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. ESA contracted with a commercial database service to perform the government records database search for listings within the appropriate ASTM standard minimum search distance (EnviroSite 2022). A detailed description of the types of information in each database reviewed and the agency responsible for compiling the data is included in the Government Records Report provided as Appendix A, which includes a list of acronyms for the individual databases.

ESA evaluated the listings with regard to the nature of potential chemicals of concern and the extent of known releases. In general, reported or potential releases likely to affect a property would include those located on or within a 1/8-mile radius of the subject property. ESA also considered additional factors such as chemical properties, regional knowledge of the site vicinity, groundwater flow direction, and available past regulatory documentation as part of the REC evaluation.

4.2 Results of Regulatory Records Search

The nine sites identified within the ASTM-specified search radius in the surrounding area are discussed below. The site locations are shown on maps with the Government Records Report in Appendix A. In addition, to augment the regulatory records search, the State Water Resources Control Board (SWRCB) GeoTracker and California Department of Toxic Substances Control (DTSC) EnviroStor websites were accessed to review documents that describe the locations and status of sites with environmental issues.

Proposed Mendota Wastewater Treatment Facility Property

The proposed Mendota wastewater treatment facility site has the five listings summarized below.

B3 and B6, Mendota wastewater treatment facility - In addition to the operating permits, the Mendota wastewater treatment facility is listed for certain violations in 2002, 2010, 2011, and 2012 regarding the discharges to the evaporation and percolation ponds. The operating violations are not cited as affecting the proposed Mendota wastewater treatment facility site. The Mendota WWTP is currently in compliance, no violations have been reported since then, and this site is not considered a REC.

7, Silver Creek Packing – This listing is for a former Leaking Underground Storage Tank (LUST) Cleanup Site at the Silver Creek Packing facility, located about 2300 feet to the northwest. This site was cleaned up and the Regional Water Quality Control Board (RWQCB) issued a no further action letter dated October 9, 1996. The no further action letter indicates that the RWQCB has concluded this site does not pose a risk to people or the environment and this site is not considered a REC.

8, Mendota School Site – This listing is for a Department of Toxic Substances Control (DTSC) investigation of a school located about 3,350 feet to the north for possible pesticides in soil. The investigation did not detect pesticides at concentrations above regulatory action levels, the DTSC issued a no further action letter, and this site is not considered a REC.

9, National Public Lands – Bakersfield Field Office – This listing is for a federal conservation area to the east and not for the release of hazardous materials. This site is not considered a REC

In summary, none of the above-summarized listings are on or close enough to the proposed Mendota wastewater treatment facility site to be able to affect said property. Therefore, none of the listings qualify as a REC, HREC, or CREC.

Proposed Hydrogen Fuel Production Property

The proposed hydrogen fuel production facility property has the four listings summarized below.

A1, West American Ave and South Ohio Ave – This listing is for an incident where vandals cut down three power poles and the transformers broke and spilled about 85 gallons of transformer oil onto soil on July 3, 2012. The affected soil was contained and removed. Also note that this date is well after polychlorinated biphenyls (PCBs) were banned for use in power pole transformers and the site reconnaissance indicated that the transformers have blue non-PCB stickers, meaning the oil would not have contained PCBs. Therefore, this spill is not considered a REC because the oil is not considered a hazardous material.

A2, Britz Fertilizers Property – This listing is for the investigation of several areas with above-ground diesel storage tanks and associated contaminated soil and groundwater. Relative to the proposed project, the area of the northwest corner of West Adams and Derrick Avenues was designated as Area 3. However, further research indicates that this location is actually at the northeast corner of West Lincoln Avenue and South Ohio Avenue (see Dump #2 on Figure 3; Krazan 2002). One 12,000-gallon diesel above-ground storage tank and one 8,000-gallon diesel above-ground storage tank were removed in 2002, along with 1,400 cubic yards of contaminated soil. Groundwater had a sheen of diesel fuel. The RWQCB issued a no further action letter dated

January 17, 2003. The no further action letter indicates that the RWQCB has concluded this site does not pose a risk to people or the environment. Because of the prior cleanup and the location within the project boundaries, this listing is considered an HREC.

4, 1X North County Bank, SW Corner of Jefferson and Murietta – This listing is mislocated on the records search map. West Jefferson Avenue is located about 3 miles north of the proposed hydrogen fuel production facility property, too far away to affect the property and outside of the ATSM-required search distances. This site is not considered a REC

5, RE Adams East LLC – This listing is for permits for electric power distribution for the solar project located on the southeast corner of Highway 33 and West South Avenue. No violations are listed and this site is not considered a REC.

In summary, none of the above-summarized listings relative to the proposed hydrogen fuel production facility property qualify as a REC or CREC. The Britz Fertilizers Property is considered a HREC because although the location experienced a spill, the tanks and contaminated soil have been removed and the regulatory agency issued a no further action letter indicating the regulatory agency does not consider this site to be a risk to people or the environment.

Orphan Sites

Sites not plotted due to poor or inadequate address information are referred to as "orphan sites" or "unmappable properties." The records search identified 30 orphan sites. However, examination of the partial location information indicates that none of the orphan sites are on or near the subject properties and are too far away to be able to be able to affect the subject properties.

4.3 Other Records Reviewed

The regulatory agency records search also provides historical aerial photographs and historical topographic maps. Fire insurance maps and city directories were not ordered because such records would not be produced for a rural property. The search results are discussed below.

Historical Aerial Photographs

Historical aerial photographs are available for the years 1946, 1955, 1960, 1965, 1971, 1975, 1978, 1982, 1985, 1987, 1993, 1995, 1998, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020, and are included in Appendix B. The red box on the aerial photographs points to the location of the proposed wastewater treatment facility and the proposed hydrogen fuel production facility. Note that the aerial photograph provider required a single project outline for the hydrogen fuel production facility, the solar facility, and the water treatment facility. This resulted in a long narrow line connecting the water treatment facility site to the solar and hydrogen facilities site. The connecting line is an artifact of the single project outline requirement and does not indicate a direct connection (e.g., a pipeline) between the two locations.

Proposed Mendota Wastewater Treatment Facility Property

In the **1946 through 1993 aerial photographs**, the proposed Mendota wastewater treatment facility property appears to be farmland. The 1946 aerial photograph shows recent plow lines. The 1955 aerial photograph shows irrigation trenches winding across the property. The 1960, 1965 and 1971 aerial photographs show a uniformly featureless look that suggests a hay field. The 1975 and 1978 aerial photographs show parallel lines suggestive of a row crop. The 1982 aerial photograph is of poor quality but the use still appears to be agricultural. The 1985 aerial photograph is of poor quality and the use of the rest of the property is unclear. The 1987 aerial photograph is of poor quality but does show the current north-south dirt road that bisects the property. The use of the rest of the property is unclear but vague parallel lineation lines suggest continued agricultural use. The 1993 aerial photograph is of moderate quality but does suggest continued agricultural use.

The **1995 through 2005 aerial photographs** are of moderate quality and show delineations that match the outline of the current wastewater treatment ponds along the north side of the subject property. The subject property was still in agricultural use. The 2005 aerial photograph shows the wastewater treatment ponds along the north side of the subject property in active use. The subject property appears to be in agricultural use.

The **2009 aerial photograph** shows the current wastewater treatment pond along the east side of the subject property. The subject property appears to be in use for the placement of dried sludge, as indicated by Mr. Gonzalez in Section 6.0, *User-Provided Information*.

The **2010 aerial photograph** shows the sludge pile on most of the subject property. The eastern portion shows the construction of the lift station in progress, as indicated by Mr. Gonzalez in Section 6.0, *User-Provided Information*.

The **2012 through 2018 aerial photographs** show the sludge pile on most of the subject property and the lift station in the northeast corner.

The **2020 aerial photograph** shows the sludge pile on most of the subject property, the lift station in the northeast corner, and the solar panel array along the eastern portion of the subject property, all consistent with the current subject property configuration and use.

Proposed Hydrogen Fuel Production Property

In the **1946 through 1965 aerial photographs**, the proposed solar and hydrogen facilities subject property is entirely farmland. Some areas are in active agricultural use, some areas have been recently plowed, and some areas are fallow. Dirt roads cross the subject property in their current alignments. One farm residence and associated smaller structures is present on the northeast corner of West Lincoln and South Ohio Avenues at the location shown on Figure 3. No other structures are visible elsewhere. Some aerial photographs show occasional smaller objects that are likely farm equipment in scattered locations.

The **1971 aerial photograph** is of moderate quality and the farm house may have been removed between 1965 and 1971. A as shown on Figure 3, a small area on the north side of West Adams Road has several structures suggestive of farm worker housing. No other changes are apparent.

The **1975 aerial photograph** shows the farm house has been removed. A small shed is visible at the location of a concrete pad that is still present at the former farm house location. In addition, smaller objects are located near the shed. No other changes are apparent.

The **1978 through 1995 aerial photographs** are of poor to moderate quality and do not show obvious changes.

The **1998 aerial photograph** is of better quality and shows no obvious changes.

The **2005 aerial photograph** shows the Britz Fertilizers Property on the plot of the former farm house.

The **2009 aerial photograph** shows the outline of the Britz Fertilizers Property shown on Figure 3 but the structures have been removed.

The **2010 through 2020 aerial photographs** show no significant changes.

Historical Topographic Maps

Historical topographic maps are available for the years 1921, 1922, 1923, 1924, 1946, 1947, 1956, 1962, 2012, 2015, and 2021, and are included in Appendix B. Note that the location of the present day residence on the subject property is identified with a red box.

Proposed Mendota Wastewater Treatment Facility Property

The **1921 through 1947** topographic maps show the proposed Mendota wastewater treatment facility subject property and the surrounding area as undeveloped.

In the **1956, 1962, 2012, and 2015** topographic maps show sewage treatment ponds further north but not adjacent to the subject property. The 1956, 2012, and 2015 topographic maps show the existing flood control channel along the west side of the subject property.

In the **2021** topographic map shows the subject property with sewage treatment ponds on the north and east sides of the property. No improvements are depicted on the subject property.

Proposed Solar and Hydrogen Fuel Production Facilities

The **1922 and 1923** topographic maps show proposed solar and hydrogen fuel production facilities subject property as undeveloped with no structures. Highway 33 is present along the east side of the subject property. The surrounding area is also undeveloped. Two diagonal dirt roads that are no longer present are shown crossing the subject property. The Levis Oil Pumping Station is shown along the western side of the subject property (see Figure 3). Pipelines to and from the station are not depicted.

The **1946 and 1947** topographic maps show four structures and one small square pond at the location of the former farm house shown on Figure 3. Two structures are depicted on the northwest corner of West South Avenue and Highway 33. The current north-south and east-west roads are shown; both diagonal roads are no longer shown.

The **1956** topographic map shows the farmworker housing observed in previously discussed aerial photographs along the north side of West Adams Avenue.

The **2012** topographic map uses the recent topographic map format that shows minimal details and no structures.

4.4 Previous Phase I Environmental Site Assessment

Fresno County provided a 2019 Phase I environmental site assessment that was conducted on behalf of Westlands Water District that included all of the subject property for the proposed hydrogen fuel production facility (AECOM 2019). Almost all of the information in the previous Phase I assessment has been covered and updated in this Phase I assessment. In addition, the previous Phase I assessment added the following information:

- Westlands either dry farms or leaves the proposed hydrogen fuel production subject property fallow. None of the existing irrigation infrastructure is used. Prior to Westlands acquiring the subject property in 2003, it was farmed primarily for cotton.
- Fire insurance maps were not prepared for this rural property.
- An environmental lien search indicated there were no environmental liens or land use limitations associated with the subject property.

4.5 Physical Setting

The following sections provide information about the physical setting of the subject property (Envirosite 2022). Geotechnical information is not a required element of ASTM E2247-16 Phase I assessments and is not included in this Phase I assessment.

Topography. The proposed Mendota wastewater treatment facility property is within the Mendota Dam, California, 7.5-minute quadrangle at elevations that range from 150 feet above mean sea level on the dirt roads to 170 feet above mean sea level at the top of the dried sludge pile. The proposed hydrogen fuel production property is within the Coit Ranch and Levis California, 7.5-minute quadrangles at elevations that range from 183 to 202 feet above mean sea level, gently sloping to the east.

Geology, Soils, and Hydrology. The surface geology at the proposed Mendota wastewater treatment facility property and the proposed hydrogen fuel production property consist of Pliocene to Holocene (i.e., 5.3 million years ago to the present time) unconsolidated and semi-consolidated, nonmarine alluvium, lake, playa, and terrace deposits.

Flood Hazard. FEMA has designated the proposed Mendota wastewater treatment facility property as within the 100-year flood zone, which means the area has a 1 percent chance of being flooded in any given year. The proposed hydrogen fuel production property is within Zone X, which is not within a FEMA designated flood zone.

SECTION 5.0
Site Reconnaissance

5.1 Methodology and Limiting Conditions

Michael Burns, PG, CEG, CHG, from ESA conducted site reconnaissance on April 29 and September 30, 2022, to assess present conditions. Access to the proposed Mendota wastewater treatment facility was provided Mr. Cristian Gonzalez, the City Manager for the City of Mendota. The proposed hydrogen fuel production property is located along Highway 33 and is open inactive farmland with no fences or occupants. Weather at the time of site reconnaissance was sunny and windy. The site conditions discussed below are limited to readily apparent environmental conditions observed. Items of interest are shown on Figure 1, *Project Area*, and Figure 2, *Proposed Mendota Wastewater Treatment Facility*, and Figure 3, *Proposed Solar Energy Generation and Hydrogen Fuel Production Facilities*.

5.2 General Site Setting

The proposed Mendota wastewater treatment facility consists of a triangular property with a mound of dried sludge that occupies most of the property. An array of solar panels is located along the eastern side and a sewage lift station is located in the northeast corner of the property. Dirt roads are along the western and northern sides of the property and one dirt road bisects the property north to south.

The proposed hydrogen fuel production facility property consists almost entirely of open flat inactive farmland with a few dirt roads, a drainage ditch along some of the west side of Highway 33, and occasional tile drain sump pumps. The surrounding area is also predominantly farmland, with a few scattered residences and two existing solar facilities.

The observed conditions, along with photographs, are described below.

5.3 Site Observations

Proposed Mendota Wastewater Treatment Facility Property

The observations for the proposed Mendota wastewater treatment facility property are discussed below. Items of interest are identified on Figure 2, *Proposed Mendota Wastewater Treatment Facility.*

Dried Sludge Pile

As discussed in Section 6.0, *User-Provided Information*, most of this subject property has been used for the placement of sludge from the wastewater treatment ponds since at least June 2009. The sludge pile is about 15 to 20 feet high, and was entirely dry and odorless on the date of the site inspection. The photograph below shows the sludge pile from the north with pipes and sewage pond agitators stored along the north side of the dried sludge pile.

The top surface of the sludge pile has scattered vegetation, as shown in the photograph below. The sewage lift station is to the upper right and the active sewage treatment ponds are in the distance. No unusual stains, discolorations, or stressed vegetation were noted. The material texture ranged from sand to silt to clay sized particles with no larger chunks of any sort. It appears that the wind has blown most of the clay-sized dust materials away from the top surface of the pile.

The sides of the dried sludge pile are chunky with a much higher content of clay-sized particles, as shown in the photographs below. No unusual stains or discolorations were noted.

Pipes, sewage treatment pond agitators, and miscellaneous materials are present along the north side of the sludge pile, as shown in the photographs below. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted. The lift station and active treatment ponds are in the distance in the top photograph.

Lift Station

As discussed in Section 6.0, *User-Provided Information*, the sewage lift station was constructed in 2010 and 2011. No oil stains or unusual odors were noted on the concrete transformer pads, as shown in the photographs below.

Solar Panel Array

The photographs below show the solar panel array along the east side of the property with an electrical panel at the northern end. No oil stains, discolored soil, or stressed vegetation was observed around the electrical panel or anywhere else around the solar panels.

Proposed Solar and Hydrogen Fuel Production Facilities

The observations for the proposed solar and hydrogen fuel production facilities sites are organized by intersections generally from north to south, as discussed below. The roads and items of interest are identified on Figure 3.

West American Avenue and Highway 33

The photographs below are from the corner of Highway 33 and the unpaved West American Avenue. The farmlands in this area were fallow at the time of the site inspection. Overhead power lines run along the west side of Highway 33. One circular enclosed concrete structure assumed to an irrigation valve was observed but with no equipment. A small rectangular area with some trees and brush that appears to have not been farmed was observed southwest of this intersection. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted.

Dump Area #1

The photographs below and one the next page show an area where discarded debris and trash has been dumped by an area of some trees and brush. The discarded materials include two broken halves of a 1,000 gallon plastic pesticide tank, small refrigerator, a stove, several empty paint cans and plastic bottles, mattresses, a couch and chairs, rigs, lumber, and miscellaneous household trash. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted. The discarded materials are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill.

Highway 33 In Between West American and West Lincoln Avenues

The photographs below show one tile drain sump and a set of transformers on a power pole along the west side of Highway 33 in between West American and West Lincoln Avenues (see Figure 3 for locations). The power transformers had the standard blue stickers indicating the transformers do not contain PCB-containing cooling oil. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted.

West Lincoln Avenue and Highway 33

The photographs below are from the corner of Highway 33 and the unpaved West Lincoln Avenue. As with the rest of the proposed hydrogen fuel production property, the farmlands in this area were fallow at the time of the site inspection. A drainage ditch is present along the west side of Highway 33. The ditch has tumbleweeds and discarded trash consisting of roof shingles, tires, broken concrete pieces, wheel rims, wood, and cloth. However, no stained soil, stressed vegetation, unusual odors, or chemical containers were noted. The discarded materials are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill.

Dump Area #2

A dump area consisting of three of the four corners at the intersection of West Lincoln and South Ohio Avenues is present at the location shown on Figure 3. As discussed above in the *Historical Aerial Photographs* section, a farm house and then the Britz Fertilizers Property were previously present at the northeast corner from before 1946 and removed by at least 1998. Other than the concrete pad for the former shed, no aboveground structures were observed. Discarded debris and trash are present on three of the four corners at this intersection, as discussed below. The discarded materials are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill.

Northeast Corner

The photographs below and on the next page are of an 80-foot-diameter pit that contains discarded debris and trash consisting of a GMC Scottsdale truck-based station wagon, a refrigerator, broken toilets, mattresses, empty buckets and bottles, broken-up furniture and lumber, children's toys, rugs, household trash, empty boxes, and miscellaneous debris. At least 28 small soil mounds are present just west of the pit that may be soil excavated from the pit or may cover buried materials of unknown composition. Some small areas of stained soil were observed but are not extensive or deep and are considered a *de minimus* condition.

The concrete pad shown below is present at the location of the former Britz Fertilizers Property, as discussed above in the *Historical Aerial Photographs* section. The pad has two abandoned active bee boxes, along with some trash and debris. Darkened stained soil is present around the northeast corner of the pad but is not extensive or deep.

The photographs below are of a half-full plastic drum with what appears to be used motor oil. Bullet holes have punctured the drum in numerous places, some of which are leaking oil to the ground. This condition is considered a *de minimus* condition because the used motor oil could be recycled at any oil recycling facility.

As shown in the photographs below, miscellaneous trash and debris is scattered elsewhere on this northeast corner of the intersection that included a refrigerator, a stove, concrete beams, lumber, tarps, mattresses, tires, empty buckets and bottles, broken-up furniture and lumber, rugs, household trash, empty boxes, and miscellaneous debris. No containers with chemicals were observed.

Northwest Corner

As shown in the photographs below, miscellaneous trash and debris have been dumped into the ditch on the northwest corner of the intersection that included broken furniture and lumber, dead sheep carcasses, a refrigerator, mattresses, tires, empty buckets and bottles, rugs, household trash, empty boxes, and miscellaneous debris. Some stained soil was observed but is considered a *de minimus* conditions because the staining is not extensive or deep.

Southeast Corner

As shown in the photographs below, miscellaneous trash and debris have been dumped into an excavated pit on the southwest corner of the intersection that included tires, broken furniture and lumber , dead sheep carcasses, a refrigerator, a microwave, mattresses, empty buckets and bottles, rugs, household trash, empty boxes, and miscellaneous debris.

In Between West Lincoln and West Adams Avenues

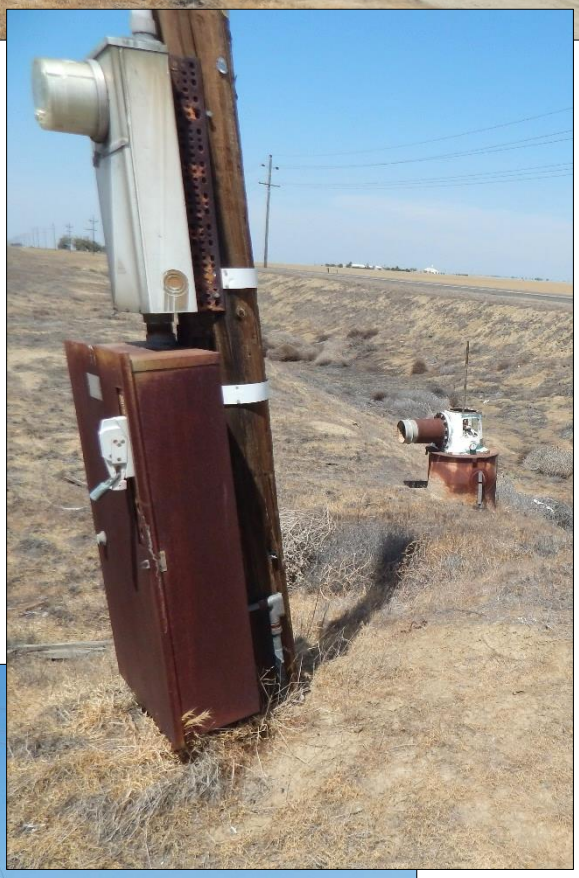
The photographs below show an inactive tile drain sump along the west side of Highway 33 in between West Lincoln and West Adams Avenues (see Figure 3 for location). The sump is located at the southern end of the previously noted ditch along the west side of Highway 33. The sump was disconnected and the electrical power box wasn't active. Minor pump oil staining was observed on the wood blocks on either side of the sump. However, the extent of the staining was limited to the wood blocks and the surrounding soil was not stained, did not have an unusual odor, and the adjacent vegetation was not stressed. The staining is considered a *de minimus* condition. A circular concrete vault for a tile drain was observed just west of the inactive sump.

West Adams Avenue and Highway 33

The photographs below are from the corner of Highway 33 and the paved West Adams Avenue. The farmlands north of West Adams Avenue were fallow at the time of the site inspection (top photograph); the farmlands to the south had been recently plowed (bottom photograph). The proposed hydrogen fuel production facility would be located on the northwest corner of this intersection (i.e., the fallow area). No stained soil, stressed vegetation, unusual odors, or chemical containers were noted.

West South Avenue and Highway 33

The photographs below are from the corner of Highway 33 and West South Avenue. The farmlands in this area had been recently plowed. The RE Adams East Solar Project, including a solar panel array and electrical substation, are located on the southeast corner of this intersection (see Figure 3). Power lines run east to west along the south side of West South Avenue. One disconnected tile drain sump pump and power pole are located on the northwest corner of this intersection. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted.



Dump Area #3

The photograph below shows a pit at the southeast corner of South Ohio and West South Avenues where discarded debris and trash has been dumped. The discarded materials include tires, empty cans, lumber, and miscellaneous household trash. Much of the material has been burned. No chemical containers were noted. The discarded materials are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill.

Proposed Solar Substation

As shown on Figure 3, a solar substation would be constructed on the southwest corner of the proposed solar facility. As shown in the photographs below, the area is fallow farmland that had been recently plowed. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted. A pond is across the road outside of the project footprint.

Proposed Electrical Service Line to the South

As shown on Figure 3, an electrical service line is proposed to run from the solar substation at the southwest corner of the proposed solar facility south to the existing PG&E-owned and operated Tranquillity Switching Station along an unnamed dirt road. The top photograph below is looking north from the paved Manning Avenue toward the proposed solar substation. The field on the right (east) is wheat); the field on the left (west) is fallow. The dirt road has one active well head at the northeast corner with no pump oil leaks were observed at the base. Power poles run north-south along the east side of the road. The bottom photograph is looking south toward the RE Tranquillity Switching Station. The southeast corner has grapes and the southwest corner is fallow. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted.

5.4 Results of Site Reconnaissance

Several areas of discarded debris and trash but are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill. The one drum of motor oil could be recycled at any oil recycler. There were no observations of underground or aboveground storage tanks, waste ponds, unusual odors, or stressed vegetation. Occasional small areas of stained soil were observed but are considered a *de minimus* condition because the staining was not extensive or deep. Minor oil staining was observed on wood supports for an inactive tile drain sump pump but are considered a *de minimus* condition because no oil staining was observed on the adjacent soil and the adjacent vegetation was not stressed. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

SECTION 6.0
User-Provided Information

Mr. Cristian Gonzalez, the City Manager for the City of Mendota, was interviewed on April 28, 2022, regarding the Mendota WWTP property upon which a tertiary sewage treatment facility would be constructed as part of the Heartland Hydrogen Project. He has been with the City for 12 to 13 years. The existing Mendota WWTP ponds have been built over time starting from the north with new ponds added over time to the south. The earliest ponds predate Mr. Gonzalez; GoogleEarth shows some ponds in existence as of 1985; the proposed tertiary sewage treatment facility and adjacent areas were farmland in 1985. GoogleEarth shows treatment ponds adjacent and north of the Project site as of July 2004. Mr. Gonzalez stated that dried sludge from the treatment ponds has been placed on the project site since as early as June 2009 and continues to the present. Construction of the existing sewage lift station located in the in the northeast corner of the proposed tertiary sewage treatment facility was started as of August 2010 and completed as of April 2011.

Fresno County provided a 2019 Phase I assessment prepared for the Westlands Water District that included all of the Westlands Water District subject properties for the proposed hydrogen fuel production facility (AECOM 2019). The previous Phase I added the following information:

- Westlands either dry farms or leaves the subject property fallow. None of the irrigation infrastructure is used. Prior to Westlands acquiring the Westlands Water District subject property, it was farmed primarily for cotton.

- Fire insurance maps were not prepared for this rural property.

- An environmental lien search indicated there were no environmental liens or land use limitations associated with the subject property.

Ms. Jennifer Montoya stated that Westslands Water District acquired the subject properties for the proposed hydrogen fuel production facility in 2003.

SECTION 7.0
Findings and Opinions

7.1 Findings and Opinions

A commercial government records database service searched relevant federal, State, and local regulatory agency lists for listings of the subject properties assessed in this report, and for nearby properties within the appropriate ASTM 2247 standard search distances. In addition, regulatory agency websites were checked to provide additional information. The records search returned nine listings. The listings at or near the subject properties are not considered able to affect the subject properties. **The search of regulatory records did not reveal any RECs or CRECs. The Britz Fertilizers Property, located within the proposed solar facility, is considered an HREC because the spill at this location has been cleaned up to the satisfaction of the overseeing regulatory agency.**

The subject properties were inspected on April 29 and September 30, 2022. The subject properties consist of two non-contiguous sets of parcels referred to as the proposed Mendota wastewater treatment facility property and the proposed hydrogen fuel production property (includes both the proposed solar energy generation and hydrogen fuel production facilities). The proposed Mendota wastewater treatment facility property has a dried sludge pile, a sewage lift station, and a solar panel array. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

The proposed solar and hydrogen fuel production facilities site consist mostly of fallow or recently plowed farmland; no active farming was observed. Three areas, referred to as Dump Areas 1, 2, and 3, have been used for the illegal dumping of a truck, a drum of used motor oil, refrigerators, microwaves, toilets, mattresses, tires, empty buckets and bottles, broken-up furniture and lumber, children's toys, rugs, household trash, empty boxes, dead sheep, and miscellaneous debris and trash. The discarded debris and trash are considered a *de minimus* condition because no hazardous materials containers were observed and the discarded materials could be properly disposed of at any non-hazardous waste landfill. The one drum of motor oil could be recycled at any oil recycler. There were no observations of underground or aboveground storage tanks, waste ponds, unusual odors, or stressed vegetation. Occasional small areas of stained soil were observed but are considered a *de minimus* condition because the staining was not extensive or deep. Minor oil staining was observed on wood supports for an inactive tile drain sump pump but are considered a *de minimus* condition because no oil staining was observed on the adjacent soil and the adjacent vegetation was not stressed. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

The city manager for the City of Mendota was interviewed regarding the history of the proposed Mendota wastewater treatment property. **The results of the interview are incorporated into this Phase I assessment and did not indicate any RECs, HRECs, or CRECs.**

Fresno County provided a 2019 Phase I environmental site assessment as user-provided information for the proposed solar and hydrogen fuel production facilities. Westlands Water District either dry farms or leaves the proposed hydrogen fuel production subject property fallow. None of the existing irrigation infrastructure is used. Prior to Westlands acquiring the subject property in 2003, it was farmed primarily for cotton. An environmental lien search indicated there were no environmental liens or land use limitations associated with the subject property. **The results of the interview information did not indicate any RECs or CRECs. The prior Phase I assessment did corroborate the previously noted Britz Fertilizers property, located at the proposed hydrogen fuel production facility, as an HREC.**

7.2 Data Gaps

ESA attempted to obtain reasonably ascertainable information regarding the subject properties and the surrounding environs. There were no data gaps identified that could affect the identification of RECs, HRECs, or CRECs.

SECTION 8.0
Report Authors and Qualifications

8.1 Report Authors and Signatures

This section includes qualification statements of the environmental professionals responsible for conducting the Phase I assessment and preparing this report.

Mr. Michael Burns, PG, CEG, CHG, of ESA conducted the data review for the subject property, conducted the site reconnaissance, and prepared the Phase I environmental site assessment report. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Phase I environmental site assessments.

The work conducted and the report written by Mr. Burns was reviewed by Mr. Luke Evans. Mr. Evans has over 16 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

Mr. Burns declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR §312.10. Mr. Evans declares that, to the best of his professional knowledge and belief, he meets the definition of Environmental Professional as defined in 40 CFR §312.10.

Mr. Burns has the specific qualifications based on education, training, and experience to assess a parcel of the nature, history, and setting of this parcel. With the assistance of Mr. Evans, he has developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Principal Analyst/Reviewer:

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

FEDERAL RCRA NON-CORRACTS TSD FACILITIES LIST

ARCHIVED RCRA TSDF: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Agency Version Date: 12/30/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 06/22/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 03/28/2022

RCRA_TSDF: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Agency Version Date: 12/30/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 06/22/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 03/28/2022

FEDERAL, STATE, AND TRIBAL REGISTERED STORAGE TANK LISTS

AST PBS: Bulk petroleum terminals with a total bulk storage capacity of 50,000 barrels or more.

Agency Version Date: 02/22/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 05/20/2022
Agency: Department of Homeland Security
Agency Contact: 202-853-5361
Most Recent Contact: 02/22/2022

EPA UST: Facilities listed in the EPA UST Finder database

Agency Version Date: 11/19/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 05/12/2022
Agency: EPA
Agency Contact: (202) 566-1667
Most Recent Contact: 02/15/2022

FEMA UST: FEMA underground storage tank listing

Agency Version Date: 10/08/2021
Agency Update Frequency: Varies
Planned Next Contact: 06/27/2022
Agency: FEMA
Agency Contact: 202-212-5283
Most Recent Contact: 04/01/2022

HIST INDIAN UST R6: Historical Underground Storage Tanks on Indian Land in EPA Region 6

Agency Version Date: 12/03/2021
Agency Update Frequency: Semi Annually
Planned Next Contact: 05/27/2022
Agency: U.S. Environmental Protection Agency Region 6
Agency Contact: 855-246-3642
Most Recent Contact: 03/01/2022

HIST INDIAN UST R7: Historical Underground Storage Tanks on Indian Land in EPA Region 7

Agency Version Date: 08/10/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 05/12/2022
Agency: U.S. Environmental Protection Agency Region 7
Agency Contact: 855-246-3642
Most Recent Contact: 02/15/2022

INDIAN UST R1: Underground Storage Tanks on Indian Land in EPA Region 1

Agency Version Date: 01/18/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/15/2022
Agency: U.S. Environmental Protection Agency Region 1
Agency Contact: 855-246-3642
Most Recent Contact: 10/18/2021

INDIAN UST R10: Underground Storage Tanks on Indian Land in EPA Region 10

Agency Version Date: 02/14/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 05/12/2022
Agency: U.S. Environmental Protection Agency Region 10
Agency Contact: 855-246-3642
Most Recent Contact: 02/14/2022

FEDERAL, STATE, AND TRIBAL REGISTERED STORAGE TANK LISTS (cont.)

INDIAN UST R2: Underground Storage Tanks on Indian Land in EPA Region 2

Agency Version Date: 12/07/2016
Agency Update Frequency: Quarterly
Planned Next Contact: 04/19/2022
Agency: U.S. Environmental Protection Agency Region 2
Agency Contact: 855-246-3642
Most Recent Contact: 01/21/2022

INDIAN UST R4: Underground Storage Tanks on Indian Land in EPA Region 4

Agency Version Date: 02/14/2022
Agency Update Frequency: Semi Annually
Planned Next Contact: 05/12/2022
Agency: U.S. Environmental Protection Agency Region 4
Agency Contact: 855-246-3642
Most Recent Contact: 02/14/2022

INDIAN UST R5: Underground Storage Tanks on Indian Land in EPA Region 5

Agency Version Date: 01/31/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/28/2022
Agency: U.S. Environmental Protection Agency Region 5
Agency Contact: 855-246-3642
Most Recent Contact: 01/31/2022

INDIAN UST R6: Underground Storage Tanks on Indian Land in EPA Region 6

Agency Version Date: 03/01/2022
Agency Update Frequency: Semi Annually
Planned Next Contact: 05/27/2022
Agency: U.S. Environmental Protection Agency Region 6
Agency Contact: 855-246-3642
Most Recent Contact: 03/01/2022

INDIAN UST R7: Underground Storage Tanks on Indian Land in EPA Region 7

Agency Version Date: 01/31/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/28/2022
Agency: U.S. Environmental Protection Agency Region 7
Agency Contact: 855-246-3642
Most Recent Contact: 01/31/2022

INDIAN UST R8: Underground Storage Tanks on Indian Land in EPA Region 8

Agency Version Date: 01/17/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/14/2022
Agency: U.S. Environmental Protection Agency Region 8
Agency Contact: 855-246-3642
Most Recent Contact: 01/17/2022

INDIAN UST R9: Underground Storage Tanks on Indian Land in EPA Region 9

Agency Version Date: 01/17/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/14/2022
Agency: U.S. Environmental Protection Agency Region 9
Agency Contact: 855-246-3642
Most Recent Contact: 01/17/2022

AST - CA: Listing of tank facilities that are subject to the California Aboveground Petroleum Storage Act

Agency Version Date: 10/04/2021
Agency Update Frequency: No update
Planned Next Contact: 06/23/2022
Agency: California Environmental Protection Agency Unified Program Section
Agency Contact: 916-327-5092
Most Recent Contact: 03/28/2022

AST_KERN COUNTY - CA: Kern County aboveground storage tank sites

Agency Version Date: 12/17/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 06/13/2022
Agency: Kern County Environment Health Division
Agency Contact: 661-862-8774
Most Recent Contact: 03/15/2022

AST_ORANGE COUNTY - CA: Orange county aboveground storage tanks

Agency Version Date: 02/22/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 05/20/2022
Agency: Orange County Health Care Agency
Agency Contact: 714-433-6000
Most Recent Contact: 02/22/2022

FEDERAL, STATE, AND TRIBAL REGISTERED STORAGE TANK LISTS (cont.)

AST_PLACER COUNTY - CA: Placer county aboveground storage tank sites

Agency Version Date: 01/25/2022
Agency Update Frequency: Semi Annually
Planned Next Contact: 04/20/2022
Agency: Placer County Environmental Health
Agency Contact: 530-745-2350
Most Recent Contact: 01/25/2022

AST_YOLO COUNTY - CA: Yolo county above ground storage tank sites listing

Agency Version Date: 01/31/2022
Agency Update Frequency: Annually
Planned Next Contact: 04/27/2022
Agency: Yolo County Environmental Health
Agency Contact: 530-666-8646
Most Recent Contact: 01/31/2022

CLOSED UST_VENTURA COUNTY - CA: Ventura County closed underground storage tank site listing

Agency Version Date: 02/01/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/29/2022
Agency: Environmental Health Division
Agency Contact: 805-654-2815
Most Recent Contact: 02/01/2022

FID UST - CA: The State Water Resource Control Board's Facility Inventory Database underground storage tank locations listing

Agency Version Date: 03/10/2022
Agency Update Frequency: Varies
Planned Next Contact: 06/06/2022
Agency: California Environmental Protection Agency
Agency Contact: 916-341-5791
Most Recent Contact: 03/10/2022

HIST AST - CA: Historical listing of tank facilities that are subject to the California Aboveground Petroleum Storage Act

Agency Version Date: 07/09/2019
Agency Update Frequency: Quarterly
Planned Next Contact: 06/30/2022
Agency: California Environmental Protection Agency Unified Program Section
Agency Contact: 916-327-5092
Most Recent Contact: 04/06/2022

HIST UST - CA: Historical UST listing

Agency Version Date: 09/24/2021
Agency Update Frequency: Varies
Planned Next Contact: 06/16/2022
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 03/21/2022

HIST UST_EL SEGUNDO CITY - CA: List of City of El Segundo Underground Storage Tanks that are no longer in current agency list.

Agency Version Date: 01/29/2018
Agency Update Frequency: Annually
Planned Next Contact: 06/17/2022
Agency: City of El Segundo Fire Department
Agency Contact: 310-524-2242
Most Recent Contact: 03/22/2022

HIST UST_KERN COUNTY - CA: List of Kern County underground storage tank records that is no longer in current agency list.

Agency Version Date: 11/28/2018
Agency Update Frequency: Annually
Planned Next Contact: 05/31/2022
Agency: Kern County Environment Health Division
Agency Contact: 661-862-8774
Most Recent Contact: 03/04/2022

HIST UST_SUTTER COUNTY - CA: List of Sutter County Underground Storage Tank records that are no longer in current agency list.

Agency Version Date: 10/22/2018
Agency Update Frequency: Annually
Planned Next Contact: 06/30/2022
Agency: Sutter County Department of Agriculture
Agency Contact: 530-822-7400
Most Recent Contact: 04/06/2022

FEDERAL, STATE, AND TRIBAL REGISTERED STORAGE TANK LISTS (cont.)

TANKS_CONTRA COSTA COUNTY - CA: Listing of aboveground storage tanks in Contra Costa County

Agency Version Date: 02/04/2022
Agency Update Frequency: Varies
Planned Next Contact: 05/03/2022
Agency: Contra Costa Health Services Department
Agency Contact: 925-335-3200
Most Recent Contact: 02/04/2022

UST - CA: Listing of active underground storage tank facilities

Agency Version Date: 03/03/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 05/30/2022
Agency: CA Gov geotracker state water resources control board
Agency Contact: N/R
Most Recent Contact: 03/03/2022

UST_ALAMEDA COUNTY - CA: Alameda County Underground Storage Tank sites

Agency Version Date: 03/03/2022
Agency Update Frequency: Varies
Planned Next Contact: 05/30/2022
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 03/03/2022

UST_CITY OF LONG BEACH - CA: City of Long Beach underground storage tank sites

Agency Version Date: 06/29/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 05/06/2022
Agency: City of Long Beach Fire Department
Agency Contact: 562-570-6782
Most Recent Contact: 02/08/2022

UST_CITY OF TORRANCE - CA: City of Torrance underground storage tank sites

Agency Version Date: 05/07/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 04/22/2022
Agency: City of Torrance Fire Department
Agency Contact: 310-618-2872
Most Recent Contact: 01/25/2022

UST_EL SEGUNDO CITY - CA: City of El Segundo Underground Storage Tanks

Agency Version Date: 01/29/2018
Agency Update Frequency: Annually
Planned Next Contact: 06/27/2022
Agency: City of El Segundo Fire Department
Agency Contact: 310-524-2242
Most Recent Contact: 03/31/2022

UST_KERN COUNTY - CA: Kern County underground storage tank sites

Agency Version Date: 12/17/2021
Agency Update Frequency: Quarterly

Agency: Yolo County Environmental Health
Agency Contact: 530-666-8646
Most Recent Contact: 02/04/2022

FEDERAL CERCLIS LIST

CERCLIS NFRAP: The CERCLIS sites with No Further Remedial Action Planned from the CERCLIS program database. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 01/28/2022

FEDERAL CERCLIS LIST (cont.)

CERCLIS-HIST: The CERCLIS program database contains information on the assessment and remediation of federal hazardous waste sites. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 01/28/2022

EPA SAA: Listing of Sites with Superfund Alternative Approach Agreements.

Agency Version Date: 11/01/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 04/25/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 01/27/2022

FEDERAL FACILITY: Sites where Federal Facilities Restoration and Reuse Office (FFRRO) arranged cleanup for Base Closure and Property Transfer at Federal Facilities

Agency Version Date: 01/28/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8712
Most Recent Contact: 01/28/2022

SEMS_8R_ACTIVE SITES: The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. NPL sites include latitude and longitude information. For non-NPL sites, a brief site status is provided.

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 01/28/2022

SEMS_8R_ARCHIVED SITES: The Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 01/28/2022

FEDERAL RCRA CORRACTS FACILITIES LIST

CORRACTS: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases

Agency Version Date: 12/30/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 06/22/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 202-566-1667
Most Recent Contact: 03/28/2022

HIST CORRACTS 2: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 05/23/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 202-566-1667
Most Recent Contact: 02/24/2022

FEDERAL DELISTED NPL SITE LIST

DELISTED NPL: National Priority List of sites that were delisted and no longer require action

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 01/28/2022

FEDERAL DELISTED NPL SITE LIST (cont.)

DELISTED PROPOSED NPL: Sites that have been delisted from the proposed National Priority List

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 01/28/2022

SEMS_DELETED NPL: All Deleted National Priority List Sties

Agency Version Date: 01/28/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/26/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867

WELLS - GAMA - CA ***(cont.)***

Samp Collection Date-Time :	1951-08-23
Chemical :	Total dissolved solids 1.06
Analytical Method :	NWIS User's Manual, QW System, Section 3.6.7
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1951-08-23
Chemical :	Sodium 190
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1951-08-23
Chemical :	Total dissolved solids 777
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1951-08-23
Chemical :	pH 7.9
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1951-08-23
Chemical :	Magnesium 9.50
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1951-08-23
Chemical :	Temperature, water 25.0
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1951-08-23
Chemical :	Bicarbonate 300
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date :	1984-08-07
Chemical :	TDS (Total Dissolved Solids) = MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1984-08-07
Chemical :	SO4 (Sulfate) = 3900 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1984-08-07
Chemical :	NH3NH4N (Ammonia) = .116 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1984-08-07
Chemical :	SC (Specific Conductivity) = 8540 UMHOS/CM
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1984-08-07
Chemical :	ZN (Zinc) = .02 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1984-08-07
Chemical :	F (Fluoride) = .4 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1986-02-04
Chemical :	SC (Specific Conductivity) = 10900 UMHOS/CM
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	CA (Calcium) = 490 MG/L
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	B (Boron) = 15 MG/L
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	TEMP (Temperature) = 17 CELSIUS
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	AS (Arsenic) = 2 UG/L
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	CR (Chromium) = 11 UG/L
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	PH (pH) = 7.7 PH UNITS
CAS Number :	N/R
Reporting Limit :	N/R
Samp Collection Date :	1986-02-04
Chemical :	TDS (Total Dissolved Solids) = MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Nitrate Not Detected mg/l as N
Analytical Method :	NWIS User's Manual, QW System, Section 3.6.7
Reporting Limit :	0.100
Lab Note :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Carbon-14 7.800
Analytical Method :	USGS TWRI 5-A5/1977, p 17
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Sulfate 690
Analytical Method :	N/R
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Molybdenum 12
Analytical Method :	USGS TWRI 5-A1/1989, p 293
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Potassium 4.10
Analytical Method :	USGS TWRI 5-A1/1989, p 393
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Mercury 0.3
Analytical Method :	USGS TWRI 5-A1/1989, p 289
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date-Time :	1988-08-19 13:00:00
Chemical :	Vanadium 5
Analytical Method :	USGS OF 93-125, p 211
Reporting Limit :	N/R
Lab Note :	N/R

Samp Collection Date :	1968-07-17
Chemical :	HCO3 (bicarbonate HCO3) = 220 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	TDS (Total Dissolved Solids) = MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	PH (pH) = 8.3 PH UNITS
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	CL (Chloride) = 680 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	NA (Sodium) = 490 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	CA (Calcium) = 72 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	B (Boron) = .6 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	SO4 (Sulfate) = 260 MG/L
CAS Number :	N/R
Reporting Limit :	N/R

Samp Collection Date :	1968-07-17
Chemical :	TEMP (Temperature) = 19 CELSIUS
CAS Number :	N/R
Reporting Limit :	N/R

(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

SSURGO
Detailed Soil Data Map

(202) 690-4985
Detailed Soil Data Map

STATSGO & MUI
General Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
General Soil Data Map

USGS GEOLOGIC AGE
USGS Digital Data Series DDS
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
USGS Digital Data Series DDS: Geologic Age and Rock Stratigraphic Unit

DAMS - CA
California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA
Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

RADON
National Radon Database
U.S. Environmental Protection Agency
215-814-2469
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

RADON - CA
Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurments

RADON EPA
RADON EPA
U.S. Environmental Protection Agency
215-814-2469
EPA list of Radon zones

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Appendix I
Land Use and Planning

I1 Consistency with Fresno County General Plan

I2 Consistency with Fresno County's Solar Facility Guidelines

I1 Consistency with Fresno County General Plan

APPENDIX I1
Consistency with Fresno County General Plan

I.1 Approach to Analysis

Pursuant to California Environmental Quality Act (CEQA) Guidelines section 15125(d), this analysis describes applicable general plans and regional plans and policies and the manner in which they apply to the Heartland Solar Project (the Project), and then evaluates the consistency of the Project with these plans and policies. Each environmental resource section in Chapter 3, *Environmental Analysis*, identifies the applicable statutes, regulations, ordinances, plans, policies, and standards that pertain to that resource. The following analysis specifically addresses the Project's consistency with the Fresno County General Plan (Fresno County 2024). The consistency analysis for other applicable plans, policies, and regulations is provided in the pertinent topical sections of Chapter 3, in the context of the subject resource area. **Table I1-1** provides an index of such discussions, listing both CEQA significance criteria and location in this document where the reader can find the impact evaluation.

The Fresno County General Plan contains seven policy elements that guide physical development within the County: Economic Development; Agriculture and Land Use; Transportation and Circulation; Public Facilities and Services; Open Space and Conservation; Health and Safety; and Housing. Consistent with CEQA Guidelines section 15125(d), General Plan policies that are not relevant to the Project are not discussed here. For example, policies guiding County review of specific plans or policies related to land use designations that are not present within the Project boundary are not addressed.

Because the policy language found in a general plan is susceptible to varying interpretations, it is often difficult to determine whether a proposed project is consistent or inconsistent with such policies. Furthermore, because plans often contain numerous policies emphasizing differing legislative goals, a project may be consistent with a general plan, taken as a whole, even though it may appear to be inconsistent with specific policies within the plan. The board or commission that enacted the plan or policy generally determines the meaning of such policies; these interpretations prevail if they are "reasonable," even though other reasonable interpretations may also exist. In light of these considerations, the consistency evaluation in this Draft EIR reflects the County's determination that, as a whole, that the Project is consistent with applicable plans and policies.[1] Finally, the Project is compared to policies in each of the General Plan elements.

[1] The Project's physical environmental impacts are addressed on a resource-by-resource basis in draft EIR Chapter 3, *Environmental Analysis*. Any conflict between the Project and General Plan policies that results in an impact to the physical environment is analyzed in Chapter 3. The Project's consistency with Fresno County General Plan policies that do not impact the physical environment may be considered by decision-makers in deciding whether to approve or deny the Project.

TABLE I1-1
CEQA SIGNIFICANCE CRITERIA REQUIRING EVALUATION OF CONSISTENCY WITH PLANS AND POLICIES

Significance Criteria (from Appendix G of the CEQA Guidelines)	EIR Section
Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state or locally designated scenic highway	Section 3.2, *Aesthetics*
Conflict with existing zoning for agricultural use, or a Williamson Act contract	Section 3.3, *Agriculture and Forestry Resources*
Conflict with or obstruct implementation of the applicable air quality plan	Section 3.4, *Air Quality*
Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance	Section 3.5, *Biological Resources*
Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.	Section 3.5, *Biological Resources*
Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.	Section 3.9, *Greenhouse Gas Emissions*
Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.	Section 3.12, *Land Use and Planning*
Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan	Section 3.13, *Mineral Resources*
Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies	Section 3.14, *Noise and Acoustics*
Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.	Section 3.18, *Transportation*
Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.	Section 3.18, *Transportation*

Tables I1-2 through I1-6 summarize the Project's consistency with applicable objectives, goals, and policies of the Fresno County General Plan is discussed below. As shown in the table, after the implementation of the various mitigation measures identified in this Draft EIR, the Project would be consistent with applicable objectives, goals, and policies.

I.2 Consistency with the Fresno County General Plan Agriculture and Land Use Element

The Agriculture and Land Use Element describes the Countywide land use concept and is intended to help the County achieve integrated and coordinated land use, open space, and transportation by defining areas of intended growth and areas that should be preserved.

The Project site is zoned AE-20, Exclusive Agricultural with a minimum lot size of 20 acres (Fresno County 2011). As indicated in section 816 of the Fresno County Zoning Code, permitted uses in AE districts include raising livestock, poultry, and plant crops; single-family residences and accessory and farm buildings; and other agricultural and home occupation uses. Electrical

transmission and distribution substations are allowed in AE districts subject to director review and approval (section 816.2(D)). Additionally, Fresno County processes PV solar facilities through the Unclassified Conditional Use Permit process based on section 853.B(14) of the Zoning Ordinance. Although the Project would occupy land designated as agriculture, it would not conflict with the County's preservation and conservation objectives. The Project's physical environmental impacts on habitat, recreation, scenic values, mineral resource extraction, and natural resource preservation are discussed in Chapter 3 of this Draft EIR. **Table I1-2** evaluates the Project's consistency with the Countywide agriculture and land use policies.

TABLE I1-2
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.1: Agricultural Land Conservation. The County shall maintain agriculturally-designated areas for agriculture use and shall direct urban growth away from valuable agricultural lands to cities, unincorporated communities, and other areas planned for such development where public facilities and infrastructure are available or can be provided consistent with the adopted General or Community Plan,	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution, and so would include the gen-tie line proposed as part of the Project.
Policy LU-A.2: Agriculture-related Uses. The County shall allow by right in areas designated Agriculture activities related to the production of food and fiber and support uses incidental and secondary to the on-site agricultural operation.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution, and so would include the gen-tie line proposed as part of the Project.
Policy LU-A.3: Special Agricultural Uses. The County may allow by discretionary permit in areas designated Agriculture, special agricultural uses and agriculturally-related activities, including value added processing facilities, and certain non-agricultural uses. Approval of these and similar uses in areas designated Agriculture shall be subject to the following applicable criteria: a. The use shall provide a needed service to the surrounding agricultural area which cannot be provided more efficiently within urban areas or which requires location in a non-urban area because of unusual site requirements or operational characteristics; b. The use should not be sited on productive agricultural lands if less productive land is available in the vicinity; c. The operational or physical characteristics of the use shall not have a detrimental impact on water resources or the use or management of surrounding properties within at least one-quarter (1/4) mile radius; d. A probable workforce should be located nearby or be readily available; e. For proposed agricultural commercial center uses the following additional criteria shall apply: 1. Commercial uses should be clustered in centers instead of single uses. 2. To minimize proliferation of commercial centers and overlapping of trade areas, commercial centers shall be located a minimum of two (2) miles from a city sphere of influence and four (4) miles from any existing or approved agricultural or rural residential commercial center or designated commercial area. 3. New commercial uses should be located within or adjacent to existing centers. 4. Sites should be located on a major road serving the surrounding area.	***Not applicable.*** The Project is not requesting discretionary permit authorization for agricultural uses of the type contemplated in this policy.

Goal/Objective/Policy Text	Project Consistency Evaluation
5. Commercial centers should not encompass more than one-quarter (1/4) mile of road frontage, or one eighth (1/8) mile if both sides of the road are involved, and should not provide potential for developments exceeding ten (10) separate business activities, exclusive of caretakers' residences; f. For proposed value-added agricultural processing facilities, the evaluation under criteria "a" above, shall consider the service requirements of the use and the capability and capacity of cities and unincorporated communities to provide the required services; and g. For proposed churches and schools, the evaluation under criteria LU-A.3a above shall include consideration of the size of the facility. Such facilities should be no larger than needed to serve the surrounding agricultural community. h. When approving a discretionary permit for an existing commercial use, the criteria listed above shall apply except for LU-A.3b, e2, e4, and e5. (RDR)	
Policy LU-A.4: Resource Extraction in Agricultural Areas. The County shall require that the recovery of mineral resources and the exploration and extraction of oil and natural gas in areas designated Agriculture comply with the Mineral Resources Section of the Open Space and Conservation Element.	***Not applicable.*** The Project does not include mineral resources recovery of oil and natural gas extraction.
Policy LU-A.5: Existing Agricultural Commercial Center Zoning. The County shall allow the Agricultural Commercial (AC) center zone district to remain in areas designated Agriculture if the land was so zoned prior to September 20, 1990. Commercial uses legally established prior to that date shall be deemed conforming, but expansion or the addition of new commercial uses shall require a discretionary permit as provided in Policy LU-A.3.	***Not applicable.*** The Project site is zoned AE20, Exclusive Agricultural.
Policy LU-A.6: Minimum Agricultural Parcel Size. The County shall maintain twenty (20) acres as the minimum permitted parcel size in areas designated Agriculture, except as provided in Policies LU-A.9, LUA. 10, and LU-A.11. The County may require parcel sizes larger than twenty (20) acres based on zoning, local agricultural conditions, and to help ensure the viability of agricultural operations.	***Not applicable.*** The Project does not include subdivision of land into smaller parcels.
Policy LU-A.7: Exceptions to Minimum Agricultural Parcel Size. The County shall generally deny requests to create parcels less than the minimum size specified in Policy LU-A.6 based on concerns that these parcels are less viable economic farming units, and that the resultant increase in residential density increases the potential for conflict with normal agricultural practices on adjacent parcels. Evidence that the affected parcel may be an uneconomic farming unit due to its current size, soil conditions, or other factors shall not alone be considered a sufficient basis to grant an exception. The decision-making body shall consider the negative incremental and cumulative effects such land divisions have on the agricultural community.	***Not applicable.*** The Project does not include subdivision of land into smaller parcels.
Policy LU-A.8: Agricultural Parcel Density. The County shall allow by right on each parcel designated Agriculture and zoned for agricultural use one (1) single family residential unit. One (1) additional single family residential unit shall be allowed for each twenty (20) acres in excess of twenty (20) acres where the required minimum parcel size is twenty (20) acres. One (1) additional single family residential unit shall be allowed for each forty (40) acres in excess of forty (40) acres where the required minimum parcel size is forty (40) acres. The County may, by discretionary permit, allow a second unit on parcels otherwise limited by this policy to a single unit.	***Not applicable.*** The Project does not propose any dwelling units.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.9: Homesite Minimum Parcel Size Exceptions. The County may allow creation of homesite parcels smaller than the minimum parcel size required by Policy LU-A.6, if the parcel involved in the division is at least twenty (20) acres in size, subject to the following criteria: a. The minimum lot size shall be sixty thousand (60,000) square feet of gross area, except that a lesser area shall be permitted when the owner submits evidence satisfactory to the Health Officer that the soils meet the Water Quality Control Board Guidelines for liquid waste disposal, but in no event shall the lot be less than one (1) gross acre; and b. One of the following conditions exists: 1. A lot less than twenty (20) acres is required for financing construction of a residence to be owned and occupied by the owner of abutting property; or 2. The lot or lots to be created are intended for use by persons involved in the farming operation and related to the owner by adoption, blood, or marriage within the second degree of consanguinity, there is only one (1) lot per related person, and there is no more than one (1) gift lot per twenty (20) acres; or 3. The present owner owned the property prior to the date these policies were implemented and wishes to retain his/her homesite and sell the remaining acreage for agricultural purposes. Each homesite created pursuant to this policy shall reduce by one (1) the number of residential units otherwise authorized on the remainder parcel created from the original parcel. The remainder parcel shall be entitled to no less than one residential unit.	***Not applicable.*** The Project does not propose the creation of homesites.
Policy LU-A.10: Substandard Lots for Agricultural Commercial. The County may allow by discretionary permit creation of substandard lots when necessary for the development of an agricultural commercial center pursuant to Policy LU-A.3 or in conjunction with development within a designated commercial interchange within the Westside Freeway Corridor Overlay. Approval of such parcels shall take into consideration the proposed use of the property, surrounding uses, and the potential for abandonment of the planned commercial use at a future date. Appropriate conditions shall be applied to minimize adverse impacts on surrounding agricultural operations. Parcels for agricultural commercial centers shall in no case be less than one (1) gross acre	***Not applicable.*** The Project does not propose an agricultural commercial center.
Policy LU-A.11: Substandard Lots for Resource Exploration and Extraction. The County may allow by discretionary permit creation of substandard size lots when such action is deemed necessary by the Board of Supervisors for the recovery of mineral resources and the exploration and extraction of oil and gas in accordance with the policies of Section OS-C, Mineral Resources, of the Open Space and Conservation Element. In no case shall such action result in creation of lots less than five (5) gross acres in size.	***Not applicable.*** The Project does not include mineral resources recovery of oil and natural gas extraction.
Policy LU-A.12: Agricultural Protection. In adopting land uses policies, regulations and programs, the County shall seek to protect agricultural activities from encroachment of incompatible land uses.	***Consistent.*** This policy is intended to guide the efficient use of land within the County. The General Plan acknowledges the need to provide the necessary infrastructure, services, and resources to accommodate planned growth. The Project would not be an inefficient use of land because it would not adversely affect the County's ability to direct growth into strategically located centers or existing developed areas; rather, it would be remotely located but would serve the County's anticipated growth. This Draft EIR evaluates the Project's impacts to the environment, infrastructure, and services. The County may consider economic impacts separate from the CEQA process when deciding whether to approve the requested permit applications.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.13: Agricultural Buffers. The County shall protect agricultural operations from conflicts with nonagricultural uses by requiring buffers between proposed non-agricultural uses and adjacent agricultural operations. Additionally, the County shall consider buffers between agricultural uses and proposed sensitive receptors when processing discretionary land use applications.	***Consistent.*** The Project would maintain a buffer between the Project and adjacent agricultural operations and would implement a reclamation plan to return the site to a state of readiness for agricultural use after Project decommissioning. Section 3.3, *Agriculture and Forestry Resources* discusses potential impacts to agricultural resources.
Policy LU-A.14: Agricultural Land Conversion Review. The County shall ensure that the review of discretionary permits includes an assessment of the conversion of productive agricultural land and that mitigation be required where appropriate.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. As indicated in section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution substations, and so would include the gen-tie line proposed as part of the Project.
Policy LU-A.15: Right-to-Farm Notice. The County shall generally condition discretionary permits for residential development within or adjacent to agricultural areas upon the recording of a Right-to-Farm Notice, which is an acknowledgment that residents in the area should be prepared to accept the inconveniences and discomfort associated with normal farming activities and that an established agricultural operation shall not be considered a nuisance due to changes in the surrounding area.	***Consistent.*** Although the Project does not include residential development, the Applicant would be required to record with the County recorder a Right-to-Farm Notice indicating that adjacent agricultural operations shall not become a nuisance due to the changed condition of the Project site.
Policy LU-A.16: Agricultural Land Preservation Programs. The County should consider the use of agricultural land preservation programs that improve the competitive capabilities of farms and ranches, thereby ensuring long-term conservation of viable agricultural operations. Examples of programs to be considered should include: land trusts; conservation easements; dedication incentives; new and continued Williamson Act contracts; Farmland Security Act contracts; the California Farmland Conservancy Program Fund; agricultural education programs; zoning regulations; agricultural mitigation fee program; urban growth boundaries; transfer of development rights; purchase of development rights; and agricultural buffer policies.	***Not applicable.*** The Project does not conflict with the County's ability to establish agricultural preservation programs. The Project site is not under Williamson Act contract.
Policy LU-A.17: Williamson Act Contracts. The County should accept Williamson Act contracts on all designated agricultural land subject to location, acreage, and use limitations established by the County provided that the County receives full subvention payment as partial replacement of local property tax revenue foregone as a result of participating in the Williamson Act program. All development and uses and activities that occur on land under contract shall comply with the requirements of the California Land Conservation Act and adopted County Rules.	***Not applicable.*** The Project does not propose to enter into a Williamson Act contract.
Policy LU-A.18: Land Improvement Programs. The County shall encourage land improvement programs to increase soil productivity in areas containing lesser quality agricultural soils.	***Not applicable.*** The Project would not conflict with the County's ability to encourage land improvement programs.
Policy LU-A.19: Reduced Soil Erosion. The County shall encourage landowners to participate in programs that reduce soil erosion and increase soil productivity. To this end, the County shall promote coordination between the Natural Resources Conservation Service, Resource Conservation Districts, UC Cooperative Extension, and other agencies and organizations.	***Consistent.*** Section 3.8, *Geology, Soils, and Paleontological Resources*, evaluates potential erosion-related impacts. The Project would comply with a Construction General Permit, and implementation of a Stormwater Pollution Prevention Plan (SWPPP) would limit the impact of construction-related soil erosion by enacting best management practices (BMPs) to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. The Project does not affect the County's ability to promote interagency coordination.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.20: Water Resources. The County shall adopt and support policies and programs that seek to protect and enhance surface water and groundwater resources critical to agriculture.	***Not applicable.*** The Project does not affect the County's ability to adopt or support policies and programs that seek to protect and enhance surface water and groundwater resources critical to agriculture.
LU-A.21: Public Education Programs. The County shall support and participate in ongoing public education programs by organizations such as the County Agricultural Commissioner's Office, UC Cooperative Extension, Farm Bureau, and industry organizations to help the public better understand the importance of the agricultural industry. (PI/IGC/JP)	***Not applicable.*** The Project would not impede the County's participation in public agricultural education programs.
Program LU-A.22: Drought Impacts. The County shall adopt and support policies and programs that seek to minimize the impact of reoccurring drought conditions on ground water supply and the agricultural industry.	***Consistent.*** The Project would comply with the Fresno County Water Conservation Ordinance (Ordinance Chapter 14.01, *Water Conservation*, section 14.01.010 et seq.). The Project would comply with water conservation measures outlined in the ordinance, as necessary, which would include drought considerations.
Policies LU-A.23: Farmland Conversion. For discretionary land use projects that are not directly related to or supportive of agricultural uses and which propose the permanent conversion of twenty acres or more of Prime Farmland, Unique Farmland or Farmland of Statewide Importance (as designated by the Farmland Mapping and Monitoring Program) to nonagricultural uses, the County shall consider and adopt feasible measures including, but not limited to: • Acquisition of conservation easements at a 1:1 ratio for lands lost to nonagricultural uses. • Fee title of agricultural mitigation land that may be held by a third party or the County. • In lieu fees paid to the County that may be used to acquire future mitigation property. • Mitigation banks. The County may exempt projects from agricultural mitigation requirements when it has been determined that conversion is occurring pursuant to a local groundwater sustainability plan, or the project is for housing which is predominately for persons of low or moderate income as defined in section 50093 of the Health and Safety Code. Further, the County may exempt discretionary land use projects from agricultural mitigation requirements if it finds that the loss of agricultural land caused by the proposed conversion is outweighed by specific overriding economic, legal, social, technological, or other benefits of the conversion, as contemplated by section 21081(b) of the Public Resources Code.	***Consistent.*** Although much of the Farmland of Statewide Importance adjacent to the Project site is protected under Williamson Act contracts, the land use site evaluation (LESA) found no significant impact on agricultural land use. The Project would not directly convert any Farmland and would include measures to limit impacts to adjacent agricultural land uses. ***Consistent.*** Although the Project does not include residential development, the Applicant would be required to record with the County recorder a Right-to-Farm Notice indicating that adjacent agricultural operations shall not become a nuisance due to the changed condition of the Project site.
Policies LU-A.24: Important Farmland Map. The County shall encourage the State of California Department of Conservation to update its Important Farmland Map in consideration of recent restrictions to groundwater pumping, reduced access to surface water and the potential loss of irrigable land.	***Not Applicable.*** The Project would not conflict with the County's ability to encourage the State of California Department of Conservation to update its Important Farmland Map.
Policies LU-B.1 – LU-B.14	***Not Applicable.*** The Project is not located within the Westside Rangelands Area.
Policies LU-C.1 – LU-C.10	***Not Applicable.*** The Project is not located within the River Influence Areas.
Policies LU-D.1 – LU-D.7	***Not Applicable.*** The Project is not located within the Westside Freeway Corridor.
Policies LU-E.1 – LU-E.28	***Not Applicable.*** The Project does not include Rural Residential development.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policies LU-F.1 – LU-F.42	***Not Applicable.*** The Project does not include Urban Transit, Residential, Commercial, or Industrial development.
Policies LU-G.1 – LU-G.23	***Not Applicable.*** The Project is not located within the incorporated or City fringe areas or an unincorporated community.

I.3 Consistency with Other Elements of the Fresno County General Plan

I.3.1 Transportation and Circulation Element

Fresno County's General Plan includes policies regarding access and safety standards of roadway facilities, bike facilities, and public transit. Although the General Plan seeks to coordinate multiple forms of transportation, including cars, commercial vehicles, buses, transit, bicycles, and pedestrian traffic, the General Plan does not contain specific policies governing pedestrian traffic.

The Project would not conflict with the objectives and policies of the Transportation and Circulation Element. As described in Section 3.18, *Transportation*, no public transportation services or dedicated pedestrian or bicycle facilities are on roads that access the Project site, and neither State Route (SR) 33 nor other roadways that would be traveled by Project traffic are listed within the Transportation and Circulation Element as an "existing or planned bikeway." The proposed development of the Project site would not introduce a barrier to non-motorized travel. Although the Project would not be located near mass transit services, it would not impede the future development of the types of circulation systems envisioned by the General Plan because it would not occupy land that would be needed to create transportation corridors or result in any other long-term changes that would adversely affect transportation in the County.

Project consistency with specific Transportation and Circulation Element policies is presented in **Table I1-3** below.

I.3.2 Public Facilities and Services Element

The Public Facilities and Services Element of the Fresno County General Plan contains goals, policies, and implementation program measures to ensure public facilities and services are adequately available and accessible in a timely fashion to serve new development. The Project's impacts with respect to public services, including police, fire, and education services, are primarily addressed in Sections 3.16, *Public Services*, and 3.10, *Hazards and Hazardous Materials.* Project consistency with specific Public Facilities and Services Element policies is presented in **Table I1-4** below.

TABLE I1-3
FRESNO COUNTY GENERAL PLAN TRANSPORTATION AND CIRCULATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy TR-A.4: Roadway Access. The County shall require that new or modified access to property abutting a roadway and to intersecting roads conform to access specifications in the Circulation Diagram and Standards section. Exceptions to the access standards may be permitted in the manner and form prescribed in the Fresno County Zoning and Subdivision Ordinances, provided that the designed safety and operational characteristics of the existing and planned roadway facility will not be substantially diminished.	***Consistent.*** Project related traffic would have a less than significant impact related to local roadways abutting the Project site. Design and construction of Project access road intersections would conform with Fresno County standards (per General Plan Policies). Applicable requirements include rights-of-way and setbacks.
Policy TR-A.6: Rights-of-Way Dedications. The County shall require dedication of right-of-way or dedication and construction of planned road facilities as a condition of land development, and require an analysis of impacts of traffic from all land development projects including impacts from truck traffic. Each such project shall construct or fund improvements necessary to mitigate the effects of traffic from the project. The County may allow a project to fund a fair share of improvements that provide significant benefit to others through traffic impact fees.	***Consistent.*** An assessment of potential traffic impacts, including truck traffic, is provided in Section 3.18, *Transportation*.
Policy TR-A.10: Roadway Improvements. The County shall ensure that land development that affects roadway use or operation or requires roadway access to plan, dedicate, and construct required improvements consistent with the criteria in the Circulation Diagram and Standards section of this element.	***Consistent.*** Local access to the Project site would be provided consistent with Circulation Diagram and Standards criteria. Section 3.18, *Transportation*, notes that design and construction of Project access road intersections would be required to conform with Fresno County standards.

TABLE I1-4
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-C.3: Surface Water Use. To reduce demand on the County's groundwater resources, the County shall encourage the use of surface water to the maximum extent feasible.	***Consistent.*** As analyzed in Section 3.11, *Hydrology and Water Quality*, the Project would have a less than significant impact to groundwater resources. Groundwater extraction associated with construction, operation, and decommissioning would be regulated to ensure that it does not cause substantial depletion of the groundwater basin.
Policy PF-C.23: Water Conservation Technologies. The County shall require that all new development within the County use water conservation technologies, methods, and practices as established by the County.	***Consistent.*** The Project would comply with the Fresno County Water Conservation Ordinance (Ordinance Chapter 14.01, *Water Conservation*, section 14.01.010 et seq.). The Project would comply with water conservation measures outlined in the ordinance, as necessary.
Policy PF-D.6: On-site Sewage Disposal Systems. The County shall permit individual on-site sewage disposal systems on parcels that have the area, soils, and other characteristics that permit installation of such disposal facilities without threatening surface or groundwater quality or posing any other health hazards and where community sewer service is not available and cannot be provided.	***Consistent.*** The Project would use portable restrooms or a septic system, which would be installed for sanitary facilities in the O&M building. If an in-ground septic system is constructed it would include a 750-gallon septic tank and an approximately 3,000 square foot leech field. Either the septic tank and leech field or portable restrooms would be installed consistent with setback and Fresno County Local Area Management Program (LAMP) design requirements and maintained in accordance with County LAMP and state requirements governing on-site waste management systems.
Policy PF-E.7: Fair-share of Costs. The County shall require new development to pay its fair share of the costs of Fresno County storm drainage and flood control improvements within unincorporated areas.	***Consistent.*** The Project is not located in an area with an existing or planned (County) stormwater drainage system. Any stormwater retention systems proposed as part of the Project would be designed to meet Fresno County and the State Water Resources Control Board requirements. Development fees, as applicable, could be imposed as a (CUP) permit condition.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-E.11: Natural Site Drainage Patterns. The County shall encourage project designs that minimize drainage concentrations and maintain, to the extent feasible, natural site drainage patterns.	***Consistent.*** The Project would not substantially alter the existing drainage pattern of the area. The Project would be designed to minimize substantial alterations to drainage patterns on the Project site. The slight increase in runoff generated from the impervious surfaces would likely infiltrate into the ground over a short distance. Rain falling onto the solar arrays would drain onto the ground underneath, which would remain pervious.
Policy PF-E.13: Natural Storm Water Drainage Systems. The County shall encourage the use of natural storm water drainage systems to preserve and enhance natural drainage features.	***Consistent.*** The Project is not located in an area with an existing or planned (County) stormwater drainage system.
Policy PF-E.14: Retention-Recharge Basins. The County shall encourage the use of retention-recharge basins for the conservation of water and the recharging of the groundwater supply.	***Consistent.*** The Project proposes to construct retention-recharge basins if deemed necessary by the County. See Chapter 2, *Project Description*.
Policy PF-E.21: Best Management Practices. The County shall require the use of feasible and practical best management practices (BMPs) to protect streams from the adverse effects of construction activities, and shall encourage the urban storm drainage systems and agricultural activities to use BMPs.	***Consistent.*** None of the new impervious surfaces would be adjacent to or otherwise directly connected to a stream. Section 3.8, *Geology, Soils, and Paleontological Resources*, evaluates potential erosion-related impacts. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. The Project proposes to revegetate the Project site as part of the proposed closure, decommissioning, and reclamation plan (see Draft EIR Appendix B2). The Project does not include tree removal or construction in creeks or riparian areas.
Policy PF-F.1: Solid Waste Source Reduction. The County shall continue to promote maximum use of solid waste source reduction, reuse, recycling, composting, and environmentally-safe transformation of wastes.	***Consistent.*** The Project would be required to comply with Fresno County's Construction and Demolition (C&D) Debris Recycling Program which requires a Waste Management Plan for recycling a minimum of 50 percent of all non-hazardous waste. Wooden construction waste would be sold, recycled, or chipped and spread on the Project site for weed control as appropriate. Other compostable materials, such as vegetation, might also be composted off-site. Operation and maintenance activities would produce negligible volumes of solid and liquid wastes that would be disposed of in accordance with all applicable requirements.
Policy PF-F.5: County Integrated Waste Management Plan. The County shall ensure that all new development complies with applicable provisions of the County Integrated Waste Management Plan	***Consistent.*** The Project would generate solid waste during construction, operation and maintenance, and decommissioning activities. All handling and processing of construction, demolition, and inert debris would be in accordance with applicable regulatory requirements. Landfill waste generated by the Project would not exceed its permitted daily tonnage or deplete substantial long-term capacity.
Policy PF-J.3: On-site Underground Utility Lines. The County shall require all new residential development along with new urban commercial and industrial development to underground utility lines onsite.	***Generally Consistent.*** The Project would include both underground and overhead interconnection and distribution lines.
Goal PF-G. To protect life and property by deterring crime and ensuring the prompt an efficient provision of law enforcement service and facility needs to meet the growing demand for police services associated with an increasing population.	***Consistent.*** The Project would not conflict with the County's ability to provide efficient law enforcement services. Police protection primarily may be required for incidents such as the theft of construction equipment and/or vandalism of the Project. To ensure Facility security, offsite security personnel could be dispatched during nighttime hours or could be onsite. In addition, appropriate security measures would be implemented to ensure control of site access and minimize security risks.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-G.2: Law Enforcement Staffing Standards. The County shall strive to maintain a staffing ratio of two (2) sworn officers serving unincorporated residents per 1,000 residents served. (This count of officers includes all ranks of deputy sheriff personnel and excludes all support positions and all sworn officers serving county wide population interests such as bailiffs, and sworn officers serving contract cities and grant specific populations).	***Consistent.*** The Project would not conflict with the County's ability to meet the desired staffing ratio; the Project would not result in new residents that could contribute to increased demand for police services.
Policy PF-G.6: Safe Design Features. The County shall promote the incorporation of safe design features (e.g., lighting, adequate view from streets into parks) into new development by providing Sheriff Department review of development proposals.	***Consistent.*** Nighttime lighting for site security or maintenance requirements would be directed downward and shielded to focus illumination on the desired work areas only, and to prevent light spillage onto adjacent properties.
Goal PF-H. To ensure the prompt and efficient provision of fire and emergency medical facility and service needs, to protect residents of and visitors to Fresno County from injury and loss of life, and to protect property from fire.	***Consistent.*** Temporary construction- or decommissioning-related increases in demand on fire protection services would not affect the ability of emergency responders to respond to incidents within the recommended time periods. Operation and maintenance personnel would not increase the population in a manner that would increase existing demand for fire protection services or require new or altered facilities.
Policy PF-H.1: Provision of Fire/Emergency Medical Service. The County shall work cooperatively with local fire protection districts to ensure the provision of effective fire and emergency medical services to unincorporated areas within the county.	***Consistent.*** The Project would not conflict with the County's ability to provide effective emergency services. The Project would not result in new residents that could contribute to the demand for police services, and would incorporate onsite security measures.
Implementation Program PF-H.B: The County shall work with the California Department of Forestry and Fire Protection, local fire protection agencies, and city fire departments to maximize the use of resources to develop functional and/or operational consolidations and standardization of services and to maximize the efficient use of fire protection resources. (See Policy PF-H.1).	***Consistent.*** The Project would not affect the County's ability to coordinate amongst relevant agencies.
Policy PF-H.2: Adequate Fire Protection Facilities. Prior to the approval of development projects, the County shall determine the need for fire protection services. New development in unincorporated areas of the County shall not be approved unless adequate fire protection facilities are provided.	***Consistent.*** Increases in long-term demand for fire protection services typically are associated with substantial increases in population. Once operational, up to 10 workers could be on the site at any one time which would not contribute to a significant population increase, and would not result in an increase to the demand for fire protection services or require new or altered facilities.
Policy PF-H.5: Minimize Fire Hazard Risk. The County shall require that new development be designed to maximize safety and minimize fire hazard risks to life and property.	***Consistent.*** Section 3.20, *Wildfire*, evaluates potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE.
Policy PF-H.8: Minimum Response Times. The County shall encourage local fire protection agencies in the County to maintain the following as minimum standards for average first alarm response times to emergency calls: a. 5 minutes in urban areas; b. 15 minutes in suburban areas; and c. 20 minutes in rural areas.	***Consistent.*** The Project's potential to increase existing demand for fire protection services would not affect the Fresno County Fire Protection District's ability to respond to incidents within the recommended time periods.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-H.10: California Fire Code. The County shall ensure that all proposed developments are reviewed for compliance with fire safety standards by responsible local fire agencies per the Uniform Fire Code and other State and local ordinances.	***Consistent.*** Section 3.20 includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. The Project would not adversely affect the County's ability to ensure that compliance reviews occur.
Policy PF-H.11: Emergency Medical Service. The County shall encourage local fire protection agencies to provide and maintain advanced levels of emergency medical services (EMS) to the public, consistent with current practice.	***Consistent.*** The Project would not affect the County's ability to encourage consistency with existing service levels.
Goal PF-I. To provide for the educational needs of Fresno County and provide libraries for the educational, recreational, and literary needs of Fresno County residents.	***Consistent.*** No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities, nor affect the County's ability to provide for the educational needs of the community.
Policy PF-I.1: Quality Education Facilities. The County shall encourage school districts to provide quality educational facilities to accommodate projected student growth in locations consistent with land use policies of the General Plan.	***Consistent.*** No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities, nor affect the County's ability to encourage the school district to provide quality learning facilities.
Policy PF-I.4: Planning School Facility Needs. The County shall work cooperatively with school districts in monitoring housing, population, and school enrollment trends and in planning for future school facility needs and shall assist school districts in locating appropriate sites for new schools.	***Consistent.*** The Project would not induce new unplanned growth and so would not affect the County's work with the school district to address future school facility needs.

I.3.3 Open Space and Conservation Element

This purpose of this element is to guide the conservation, preservation, and/or development of open space and natural resources, including biological, cultural, mineral, and scenic resources. The Project's impacts with respect to species and habitat preservation, mineral resource extraction, and aesthetics are primarily addressed in Sections 3.2, *Aesthetics*, 3.5, *Biological Resources*, 3.6, *Cultural and Tribal Resources*, and 3.13, *Mineral Resources.* The Project site intermittently has been cultivated for agricultural use for at least the past 10 years; no naturally occurring plant communities are present. The physical environmental impacts of the Project are described throughout the Draft EIR. Generally speaking, the Project would not contribute substantially to the degradation of natural resources after the implementation of mitigation measures. It would provide a source of renewable energy for use within California, increasing the productive capacity of the land while avoiding the types of pollution traditionally associated with fossil fuel energy sources.

The Open Space and Conservation Element of the Fresno County General Plan also evaluates the scenic resources of Fresno County and provides policies intended to protect the scenic resources of the County and ensure that development enhances those resources through various measures including identification, development review, acquisition, and other methods. The Project site has not been identified as a scenic resource. The Fresno County General Plan also includes policies intended to protect scenic resources along roadways of the County by identifying, developing,

and maintaining scenic amenities along roads and highways in the County and ensuring that development enhances those resources. According to Policy OS-L.1, Fresno County has designated a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways. According to this element, the only designated scenic roadway in the vicinity of the Project site is Interstate 5 (10 miles west of the Project), which is designated as a scenic highway.

Project consistency with specific Open Space and Conservation Element policies is presented in **Table I1-5** below.

TABLE I1-5
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-A.20: Minimization of Sedimentation and Erosion. The County shall minimize sedimentation and erosion through control of grading, cutting of trees, removal of vegetation, placement of roads and bridges, and use of off-road vehicles. The County shall discourage grading activities during the rainy season unless adequately mitigated to avoid sedimentation of creeks and damage to riparian habitat.	***Consistent.*** Section 3.8, *Geology, Soils, and Paleontological Resources*, includes an evaluation of potential erosion-related impacts and associated mitigation. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. The Project proposes to revegetate the Project site as part of the proposed closure, decommissioning, and reclamation plan (see Draft EIR Appendix B2). The Project does not include tree removal or construction in creeks or riparian areas.
Policy OS-A.21: Best Management Practices. The County shall continue to require the use of feasible and practical best management practices (BMPs) to protect streams from the adverse effects of construction activities and urban runoff.	***Consistent.*** New impervious surfaces would not be adjacent to or otherwise directly connected to a distinct drainage channel. Section 3.8, *Geology, Soils, and Paleontological Resources*, evaluates potential erosion-related impacts. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. The Project proposes to revegetate the Project site as part of the proposed closure, decommissioning, and reclamation plan (see Draft EIR Appendix B2). The Project does not include tree removal or construction in creeks or riparian areas.
Policy OS-C.1: Incompatible Mining Uses. The County shall not permit incompatible land uses within the impact area of existing or potential surface mining areas.	***Not Applicable.*** The Project site is neither an existing surface mining area nor has been identified as a future surface mining area. Neither the SMGB nor Fresno County has officially designated the area as an aggregate resource area or mineral deposit of statewide or regional significance.
Policy OS-C.2: Mineral Resource Zones. The County shall not permit land uses incompatible with mineral resource recovery within areas designated as Mineral Resource Zone 2 (MRZ-2).	***Not Applicable.*** The Project site is not within an area designated MRZ-2.
Policy OS-C.7: Mining Buffers. The County shall require that new non-mining land uses adjacent to existing mining operations be designed to provide a buffer between the new development and the mining operations. The buffer distance shall be based on an evaluation of noise, aesthetics, drainage, operating conditions, biological resources, topography, lighting, traffic, operating hours, and air quality.	***Not Applicable.*** The Project site is not adjacent to existing mining operations.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-C.10: Mineral Resource Lands Protection. The County shall not permit land uses that threaten the future availability of mineral resource or preclude future extraction of those resources.	***Not Applicable.*** Neither the SMGB nor Fresno County has designated the Project site or the area as an aggregate resource area or mineral deposit of statewide or regional significance.
Policy OS-C.12: New Development Compatibility. The County shall ensure that new discretionary land use developments are compatible with existing and potential surface mining areas and operations as identified on the Mineral Resource Zone Maps prepared by the State Division of Mines and Geology and other mineral resource areas identified by the County.	***Not Applicable.*** The Project is not proposed within an existing or potential surface mining area as identified on the Mineral Resource Zone Maps prepared by the State Division of Mines and Geology.
Policy OS-C.13: Oil and Gas Regulation Areas. Fresno County shall be divided into three areas for the regulation of oil and gas development. A) Urban areas including all land within one- fourth mile of the planned urban boundaries shown on adopted community plans. B) Established oil and gas fields as determined and updated by the California Division of Oil and Gas, excluding urban areas except where specifically included in these policies. C) Non-urban areas including all land not within either established oil and gas fields or urban areas.	**Consistent.** California Department of Conservation, Geologic Energy Management Division (CalGEM) records indicate there are no known oil or gas wells within the Project site (see Draft EIR Appendix A, *Scoping Report*).
OS-E.1 Avoid Habitat Loss. The County shall support efforts to avoid the "net" loss of important wildlife habitat where practicable. In cases where habitat loss cannot be avoided, the County shall impose adequate mitigation for the loss of wildlife habitat that is critical to supporting special-status species and/or other valuable or unique wildlife resources. Mitigation shall be at sufficient ratios to replace the function and value of the habitat that was removed or degraded. Mitigation may be achieved through any combination of creation, restoration, conservation easements, and/or mitigation banking. Conservation easements should include provisions for maintenance and management in perpetuity. The County shall recommend coordination with the US Fish and Wildlife Service and the California Department of Fish and Wildlife to ensure that appropriate mitigation measures and the concerns of these agencies are adequately addressed. Important habitat and habitat components include nesting, breeding, and foraging areas, important spawning grounds, migratory routes, migratory stopover areas, oak woodlands, vernal pools, wildlife movement corridors, and other unique wildlife habitats (e.g., alkali scrub) critical to protecting and sustaining wildlife populations.	***Consistent.*** The Project site does contain potentially suitable migratory corridors and breeding or nesting habitat for wildlife species, including San Joaquin kit fox; burrowing owls and other raptors, including Swainson's hawk, red-tailed hawk; and migratory birds. The implementation of mitigation measures recommended in Draft EIR Section 3.5, *Biological Resources*, would prevent potential significant impacts to these species. See also Draft EIR Section 2.6.7.4, *Wildlife-friendly Design Features*, in Chapter 2, *Project Description*.
Policy OS-E.2: Construction Buffers. The County shall require adequate buffer zones between construction activities and significant wildlife resources, including both on-site habitats that are purposely avoided and significant habitats that are adjacent to the project site, in order to avoid the degradation and disruption of critical life cycle activities such as breeding and feeding. The width of the buffer zone should vary depending on the location, species, etc. A final determination shall be made based on informal consultation with the U.S. Fish and Wildlife Service and/or the California Department of Fish and Wildlife.	**Consistent**. With the implementation of Mitigation Measure 3.5-1 (Protection of San Joaquin Kit Fox and Badger During Construction), Mitigation Measure 3.5-2 (Worker Environmental Awareness Training and Best Management Practices for Biological Resources), Mitigation Measure 3.5-3 (Protection of Nesting Birds, Including Swainson's Hawk) the Project would have a less-than-significant impact on significant wildlife resources, including habitats.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-E.3: Wildlife Habitat Protection. The County shall require development in areas known to have particular value for wildlife to be carefully planned and, where possible, located so that the value of the habitat for wildlife is maintained.	***Consistent.*** With the implementation of Mitigation Measure 3.5-1 (Protection of San Joaquin Kit Fox and Badger During Construction), Mitigation Measure 3.5-2 (Worker Environmental Awareness Training and Best Management Practices for Biological Resources), Mitigation Measure 3.5-3 (Protection of Nesting Birds, Including Swainson's Hawk) the Project would have a less-than-significant impact on significant wildlife resources, including habitats.
Policy OS-E.4: Wildlife Habitat Management Practices. The County shall encourage private landowners to adopt sound wildlife habitat management practices, as recommended by the California Department of Fish and Wildlife officials and the US Fish and Wildlife Service.	***Consistent.*** With the implementation of Mitigation Measure 3.5-4 (Wildlife Friendly Fencing) the Project would have a less-than-significant impact on wildlife movement. The Project would not affect the County's ability to encourage private landowners to adopt sound wildlife habitat management practices.
Policy OS-E.6:Habitat Corridors. The County shall ensure the conservation of large, continuous expanses of native vegetation to provide suitable habitat for maintaining abundant and diverse wildlife populations, as long as this preservation does not threaten the economic well-being of the County.	***Consistent.*** The Project site has been cultivated or left fallow for at least the past 10 years and does not contain or contribute to a large, continuous expanses of native vegetation. See Draft EIR Appendix C, *Agriculture and Forestry*.
Policy OS OS-E.7 Pesticide Use Monitoring. The County shall continue to closely monitor pesticide use in areas adjacent to habitats of special-status plants and animals.	***Consistent.*** A Pest Management Plan would be implemented to control the introduction or establishment of pests or weeds during Project activities. Implementation of this plan would prevent the Project site from becoming a nuisance to adjacent agricultural operations or biological resource habitats through the introduction of pests or weeds. Consistent with the Fresno County Solar Facility guidelines, the Project would include a sufficient buffer to minimize impacts of the operation to adjacent properties. The Project also would be subject to any applicable requirements of San Joaquin Valley Air Pollution Control District Rule 4102 (Nuisance) as indicated in scooping input provided by the District (see Appendix A, *Scoping Report*).
Policy OS-E.9: Biological Resource Evaluation. Prior to approval of discretionary development permits, the County shall require, as part of any required environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based upon field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant resources and/or special-status plants or animals. Such evaluation will consider the potential for significant impact on these resources and will either identify feasible mitigation measures or indicate why mitigation is not feasible.	***Consistent.*** Site-specific, Project-specific biological resources reports have been prepared by qualified biologists. See Draft EIR Appendices E1 (Biological Resources Reconnaissance Report), E2 (Swainson's Hawk Survey Report), and E3 (Biological Resources Report). See also Draft EIR Section 3.5, *Biological Resources*, which has been prepared and reviewed by qualified biological resources experts (see Draft EIR Chapter 5, *Report Preparers*).
Policy OS-E.10: Permanent Protection. The County shall support State and Federal programs to acquire significant fish and wildlife habitat areas for permanent protection and/or passive recreation use.	***Not Applicable.*** The Project would not conflict with the County's ability to support such programs.
Policy OS-E.15: Wildlife Migration Routes. The County should preserve, to the maximum extent practicable, significant wildlife migration routes such as the North Kings Deer Herd migration corridors and fawn production areas.	***Consistent.*** The Project site is located within a significant avian migration route known as the Pacific Flyway, which covers the entire western side of North America. Although individual birds may be affected by collision with proposed electrical service lines or poles, the Project is not expected to affect the regional bird populations that use the Pacific Flyway. See Draft EIR Section 3.5.2, *Direct and Indirect Effects of the Project*, within Section 3.5, *Biological Resources.*

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-E.17: Endangered Species Habitat. The County should preserve, to the maximum possible extent, areas defined as habitats for rare or endangered animal and plant species in a natural state consistent with State and Federal endangered species laws.	***Consistent.*** Although the Project site has been cultivated or left fallow for at least the past 10 years and does not contain habitat in a "natural state," the Project would have a less-than-significant impact on significant wildlife resources, including habitats, with the implementation of Mitigation Measure 3.5-1 (Protection of San Joaquin Kit Fox and Badger During Construction), Mitigation Measure 3.5-2 (Worker Environmental Awareness Training and Best Management Practices for Biological Resources), Mitigation Measure 3.5-3 (Protection of Nesting Birds, Including Swainson's Hawk).
Policy OS-E.18: Habitat Easements and Regulations. The County should preserve areas identified as habitats for rare or endangered plant and animal species primarily through the use of open space easements and appropriate zoning that restrict development in these sensitive areas.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. The Project site has been cultivated or left fallow for at least the past 10 years and does not contain habitat in a "natural state". Habitat preserves are intended for higher quality habitat areas.
Policy OS-E.19: Nesting Birds. For development projects on sites where tree or vegetation/habitat removal is necessary and where the existence of sensitive species and/or bird species protected by California Fish and Wildlife Code Sections 3503 and 3503.5 and Migratory Bird Treaty Act has been determined by a qualified biologist, surveys for nesting birds shall be conducted within 14 days prior to project activities by a qualified biologist retained by the developer for all construction sites where activities occurring during nesting bird season (February 1 through September 15). The surveys shall include the entire disturbance area plus at least a 500-foot buffer around the project site. If active nests are located, all construction work shall be conducted outside a buffer zone from the nest to be determined by the qualified biologist. The buffer shall be a minimum of 250 feet for non-raptor bird species and at least 500 feet for raptor species, unless determined otherwise by the qualified biologist. Buffer distances for bird nests shall be site-specific and an appropriate distance, as determined by a qualified biologist. The buffer distances shall be specified to protect the bird's normal behavior thereby preventing nesting failure or abandonment. The buffer distance recommendation shall be developed after field investigations that evaluate the bird(s) apparent distress in the presence of people or equipment at various distances. Abnormal nesting behaviors which may cause reproductive harm include, but are not limited to, defensive flights/vocalizations directed towards project personnel, standing up from a brooding position, and flying away from the nest. The qualified biologist shall have authority to order the cessation of all nearby project activities if the nesting birds exhibit abnormal behavior which may cause reproductive failure (nest abandonment and loss of eggs and/or young) until an appropriate buffer is established. Larger buffers may be required depending upon the status of the nest and the construction activities occurring in the vicinity of the nest. The buffer area(s) shall be closed to all construction personnel and equipment until the adults and young are no longer reliant on the nest site. A qualified biologist shall confirm that breeding/nesting is completed, and young have fledged the nest prior to removal of the buffer. The biologist shall submit a report of these preconstruction nesting bird surveys to the County to document compliance within 30 days of its completion.	***Consistent.*** The Project would have a less than significant effect on nesting birds with implementation of measures identified in Section 3.5.3.3 of the EIR. Specifically, Mitigation Measure 3.5-2 (Worker Environmental Awareness Training and Best Management Practices for Biological Resources) and Mitigation Measure 3.5-3 (Protection of Nesting Birds, Including Swainson's Hawk) would be implemented to reduce effects. These measures contain requirements such as preconstruction surveys and establishment of (construction) avoidance buffers. With implementation of the mitigation measures, the Project would be consistent with the County's nesting birds policy.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-F.5: Rare, Threatened, and Endangered Species. The County shall establish procedures for identifying and preserving rare, threatened, and endangered plant species that may be adversely affected by public or private development projects. The County shall require, as part of the environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based on field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant plant resources and/or special-status plant species. Such evaluation shall consider the potential for significant impact on these resources and shall either identify feasible mitigation measures or indicate why mitigation is not feasible.	***Consistent.*** The Project does not affect the County's establishment of procedures for identifying and preserving rare, threatened, and endangered plant species. A biological resources evaluation of the Project site was prepared by a qualified biologist (see Appendix E, *Biological Resources*). See also Draft EIR Section 3.5, *Biological Resources*, which documents the impacts analysis.
Policy OS-F.8: Vegetation for Wildlife. The County should encourage landowners to maintain natural vegetation or plant suitable vegetation along fence lines, drainage and irrigation ditches and on unused or marginal land for the benefit of wildlife.	***Consistent.*** Although the Project site has been cultivated or left fallow for at least the past 10 years and does not contain native vegetation, revegetation would occur as part of the proposed closure, decommissioning, and reclamation plan (see Draft EIR Appendix B2).
Policy OS-G.11: Sensitive Receptors. The County shall continue, through its land use planning processes, to avoid inappropriate location of residential uses and sensitive receptors in relation to uses that include but are not limited to industrial and manufacturing uses and any other use which have the potential for creating a hazardous or nuisance effect.	***Consistent.*** The Project does not propose a new residential use that would require the County to apply its land use planning process to regulate the location of residential uses. The Project does, however, propose new industrial use to be considered in future residential planning decisions. Project compliance with noise and other standards of the General Plan and County Code as well as compliance with the Solar Facility Guidelines (see Draft EIR Appendix B2) would ensure that hazards and nuisance conditions do not result.
Policy OS-G.14: Fugitive Dust Control Measures. The County shall include fugitive dust control measures as a requirement for subdivision maps, site plans, and grading permits. This will assist in implementing the SJVUAPCD's particulate matter of less than ten (10) microns (PM_{10}) regulation (Regulation VIII). Enforcement actions can be coordinated with the Air District's Compliance Division.	***Consistent.*** The Project owner would be subject to the independently enforceable requirements of San Joaquin Valley Air Pollution Control District rules and regulations, including Regulation VIII (Fugitive Dust Rules).
Policy OS-G.15: Access Road Standards. The County shall require all access roads, driveways, and parking areas serving new commercial and industrial development to be constructed with materials that minimize particulate emissions and are appropriate to the scale and intensity of use.	***Consistent.*** The construction of all access roads, driveways, and parking areas serving the Project would be constructed in compliance with County requirements.
Policy OS-G.16: Roadway Dust Control. The County shall continue to work to reduce PM_{10} and $PM_{2.5}$ emissions from County-maintained roads by considering shoulder treatments for dust control as part of road reconstruction projects.	***Consistent.*** The Project's implementation of required dust control measures would reduce PM_{10} and $PM_{2.5}$ emissions from Project use of County-maintained roads.
Policy OS-H.2: Park Standards. The County shall strive to maintain a standard of five (5) to eight (8) acres of County-owned improved parkland per one thousand (1,000) residents in the unincorporated areas.	***Consistent.*** The Project would not be located on designated parkland, or introduce new residents and, thereby, affect the ratio of parkland per resident.
Goal OS-J: To identify, protect, and enhance Fresno County's important historical, archeological, paleontological, geological, and cultural sites and their contributing environment, and promote and encourage preservation, restoration, and rehabilitation of Fresno County's historically significant resources in order to promote historical awareness, community identity, and to recognize the County's valued assets that have contributed to past County events, trends, styles of architecture, and economy.	***Consistent.*** The Project would not conflict with the County's ability to protect cultural or paleontological resources. See Draft EIR Section 3.6, *Cultural Resources*, and Section 3.8, *Geology, Soils, and Paleontological Resources*.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-J.1: Preservation of Historic Resources. The County shall encourage preservation of any sites and/or buildings identified as having historical significance pursuant to the list maintained by the Fresno County Historic Landmarks and Records Advisory Commission.	***Consistent.*** The Project would not have a significant adverse impact on the preservation of historic sites or buildings. There are no historic structures on the Project site. See Draft EIR Section 3.6, *Cultural Resources*.
Policy OS-J.2: Historic Resources Consideration. The County shall consider historic resources during preparation or evaluation of plans and discretionary development projects.	***Consistent***. Draft EIR Section 3.6 documents the County's consideration of historic resources as part of the CEQA process for this Project.
Policy OS-J.4: Cultural Resources Protection and Mitigation. The County shall require that discretionary development projects, as part of any required CEQA review, identify and protect important historical, archeological, tribal, paleontological, and cultural sites and resources. For projects requiring ground disturbance and located within a high or moderate cultural sensitivity areas, a cultural resources technical report may be warranted, including accurate archival research and site surveys conducted by qualified cultural resources practitioners. The need to prepare such studies shall be determined based on the tribal consultation process and initial outreach to local or state information centers.	***Consistent.*** Section 4.6, *Cultural and Tribal Cultural Resources*, evaluates potential Project impacts to cultural, archaeological, and historic resources. Section 3.8, *Geology, Soils, and Paleontological Resources*, analyzes potential impacts to paleontological resources. In the event that unknown archaeological resources are discovered during Project construction, the Project owner would implement Mitigation Measures which would requires the retention of a qualified archaeologist and cultural resources awareness training, and which governs procedures in the event of inadvertent discovery of archaeological materials.
Policy OS-J.14: Sites Protection and Mitigation. The County shall require that discretionary development projects, as part of any required CEQA review, identify and protect important historical, archeological, paleontological, and cultural sites and their contributing environment from damage, destruction, and abuse to the maximum extent feasible. Project-level mitigation shall include accurate site surveys, consideration of project alternatives to preserve archeological and historic resources, and provision for resource recovery and preservation when displacement is unavoidable.	***Consistent.*** Section 3.6 documents the County's consideration of, and potential impacts to, cultural, archaeological, and historic resources. Section 3.8 documents the County's consideration of, and potential impacts to, paleontological resources. Confidential reports to be protected from public disclosure due to the sensitivity of the information they contain have been prepared for this Project in furtherance of the analysis of potential impacts to cultural and paleontological resources. Although significant impacts to known resources are not anticipated, the EIR proposes mitigation measures to protect unidentified resources in the event they are discovered during Project activities.
Goal OS-K: To conserve, protect, and maintain the scenic quality of Fresno County and discourage development that degrades areas of scenic quality.	***Consistent.*** Project facilities would contribute new energy infrastructure to a viewscape that includes existing energy infrastructure located adjacent to and in the vicinity of the Project site. See Draft EIR Section 3.2, *Aesthetics*.
Policy OS-K.1: Scenic Resource Preservation. The County shall encourage the preservation of outstanding scenic views, panoramas, and vistas wherever possible. Methods to achieve this may include encouraging private property owners to enter into open space easements for designated scenic areas.	***Consistent.*** As analyzed in Draft SEIR Section 3.2.4.3, *Direct and Indirect Effects of the Project*, in Section 3.2, *Aesthetics*, There are no designated scenic vistas within the viewshed of the entire Project site. The Project would not cause a substantial adverse effect on a scenic vista.
Policy OS-K.4: Incorporating Scenic Features. The County should require development adjacent to scenic areas, vistas, and roadways to incorporate natural features of the site and be developed to minimize impacts to the scenic qualities of the site.	***Consistent.*** As analyzed in Draft SEIR Section 3.2.4.3, *Direct and Indirect Effects of the Project*, in Section 3.2, *Aesthetics*, the Project would not cause a substantial adverse effect on a scenic vista and would not substantially damage scenic resources because none are present within the viewshed of the Project site.
Goal OS-L: To conserve, protect, and maintain the scenic quality of land and landscape adjacent to scenic roads in Fresno County.	***Consistent.*** The Project is not located within a state scenic highway corridor. The nearest state scenic highway is approximately 50 miles east of the Project site.
Policy OS-L.1: Scenic Roadway System. The County designates a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways. Definitions and designated roadways are showing in the Scenic Roadways list below. Figure OS-1 shows the locations of the designated roadways.	***Consistent.*** The Project does not affect the County's ability to designate scenic roadways.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-L.3: Scenic Roadway Management. The County shall manage the use of land adjacent to scenic drives and scenic highways based on the following principles: b. Proposed high voltage overhead transmission lines, transmission line towers, and cell towers shall be routed and placed to minimize detrimental effects on scenic amenities visible from the right-of-way.	***Consistent.*** There are no designated state scenic highways or roadways eligible for scenic designation within the Project viewshed.

I.3.4 Health and Safety Element

The Health and Safety Element outlines Fresno County's planning strategies regarding emergency management and response, fire hazards, flood hazards, seismic and geological hazards, airport hazards, hazardous materials, and noise. The Project's impacts with respect to safety are primarily addressed in Section 3.8, *Geology, Soils, and Paleontological Resources*, Section 3.10, *Hazards and Hazardous Materials,* Section 3.14*, Noise and Acoustics,* and Section 3.20, Wildfire. The design of the Project, as well as mitigation measures recommended in this Draft EIR, consider the potential seismic, soil instability, flood, fire, waste, and other hazards that are present in the Project area or that could result as a consequence of Project implementation. Although the Project would not avoid all hazards, even with Project consistency with specific Health and Safety Element policies is presented in **Table I1-6** below.

TABLE I1-6
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-B.1: Fire Hazards Review. The County shall review project proposals to identify potential fire hazards and to evaluate the effectiveness of preventive measures to reduce the risk to life and property.	***Consistent.*** Draft EIR Section 3.20 documents the County's review of the Project's potential wildfire impacts and any mitigation measures to reduce the risk to life and property.
Policy HS-B.7: Fire and Emergency Vehicle Access. The County shall require new discretionary development projects to have adequate access for fire and emergency vehicles and equipment. All major subdivisions shall have a minimum of two (2) points of ingress and egress. The County shall implement feasible recommendations in AB2911 Office of the State Fire Marshall Subdivision Survey Reports, which survey subdivisions without a secondary means of egress routes for evacuation and other fire safety factors.	***Consistent.*** The Project site would have adequate emergency access.
Policy HS-B.10: Fire Agency Review of Development Proposals. The County shall refer development proposals in the unincorporated county to the appropriate local fire agencies for review of compliance with fire safety standards. If dual responsibility exists, both agencies shall review and comment relative to their area of responsibility. If standards are different or conflicting, the more stringent standards shall apply.	***Consistent.*** The Project does not affect the County's ability to refer development proposals to appropriate fire agencies for review.
Policy HS-D.3: Soils and Geologic-Seismic Analysis. The County shall require that a soils engineering and geologic-seismic analysis be prepared by a California-registered engineer or engineering geologist prior to permitting development, including public infrastructure projects, in areas prone to geologic or seismic hazards (i.e., fault rupture, groundshaking, lateral spreading, lurchcracking, fault creep, liquefaction, subsidence, settlement, landslides, mudslides, unstable slopes, or avalanche).	***Consistent.*** As described and analyzed in Draft EIR Section 3.8, *Geology, Soils, and Paleontological Resources*, geologic hazards at the site are not significant. There is no risk that the Project would cause fault rupture or lead to significant impacts related to seismic ground shaking, liquefaction, erosion, or subsidence.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-D.4: Soils and Geologic-Seismic Structure Design. The County shall require all proposed structures, additions to structures, utilities, or public facilities situated within areas subject to geologic-seismic hazards as identified in the soils engineering and geologic-seismic analysis to be sited, designed, and constructed in accordance with applicable provisions of the Uniform Building Code (Title 24 of the California Code of Regulations) and other relevant professional standards to minimize or prevent damage or loss and to minimize the risk to public safety.	***Consistent.*** The Project would be constructed in compliance with the geotechnical and seismic design criteria required for construction in accordance with the California Building Code (CBC).
Policy HS-D.5: Alquist-Priolo Earthquake Fault Act. Pursuant to the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code, Chapter 7.5), the County shall not permit any structure for human occupancy to be placed within designated Earthquake Fault Zones unless the specific provisions of the Act and Title 14 of the California Code of Regulations have been satisfied.	***Consistent.*** The Project does not propose any structure for human occupancy. Nonetheless, the Project would be constructed in compliance with applicable geotechnical and seismic design criteria in accordance with the CBC.
Policy HS-D.7: Soils Report. The County shall require a soils report by a California-registered engineer or engineering geologist for any proposed development, including public infrastructure projects, that requires a County permit and is located in an area containing soils with high "expansive" or "shrink-swell" properties. Development in such areas shall be prohibited unless suitable design and construction measures are incorporated to reduce the potential risks associated with these conditions.	***Consistent.*** As analyzed in Draft EIR Section 3.8.3.2, *Direct and Indirect Effects of the Project*, in Section 3.8 *Geology, Soils, and Paleontological Resources*, the Project would not be located on expansive soils, i.e., soils that possess a "shrink-swell" characteristic.
Policy HS-D.8: Minimize Soil Erosion. The County shall seek to minimize soil erosion by maintaining compatible land uses, suitable building designs, and appropriate construction techniques. Contour grading, where feasible, and revegetation shall be required to mitigate the appearance of engineered slopes and to control erosion.	***Consistent.*** The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Revegetation of the Project site would occur as part of the proposed closure, decommissioning, and reclamation plan (see Draft EIR Appendix B2).
Goal HS-F: To minimize the risk of loss of life, injury, serious illness, and damage to property resulting from the use, transport, treatment, and disposal of hazardous materials and hazardous wastes.	***Consistent.*** Project-related use, storage, transport, and disposal of hazardous materials would be carried out in accordance with federal, state, and local regulations.
Policy HS-F.1: Hazardous Materials Facilities. The County shall require that facilities that handle hazardous materials or hazardous wastes be designed, constructed, and operated in accordance with applicable hazardous materials and waste management laws and regulations.	***Consistent.*** The Project would use, store, transport, and dispose of hazardous materials in accordance with all applicable federal, state, and local requirements.
Policy HS-F.3: Hazardous Materials Incident Response Plan. The County, through its Hazardous Materials Incident Response Plan, shall coordinate and cooperate with emergency response agencies to ensure adequate Countywide response to hazardous materials incidents.	***Consistent.*** The Project would not affect the County's ability to coordinate or cooperate amongst agencies to ensure adequate Countywide response to hazardous materials incidents. Although the 2019 Fresno County Fire Protection District Policy 320, *Hazardous Materials Response*,[2] is a draft that has not been adopted, the Project would not interfere with its implementation.

[2] Fresno County Fire Protection District, 2019. [Draft] Policy 320, Hazardous Materials Response. March 6, 2019. https://www.fresnocountyfire.org/files/628cd78b6/320-Hazardous_Materials_Response.pdf. Accessed June 8, 2023.

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-H.1: Minimize Noise Impacts. The County shall require that all proposed development incorporate design elements necessary to minimize adverse noise impacts on surrounding land uses.	***Consistent.*** Draft EIR Section 3.14, *Noise and Acoustics*, documents the County's analysis of potential noise impacts and concludes that, with mitigation incorporated, the Project would have a less-than-significant impact.
Policy HS-H.4: Noise Mitigation Design and Acoustical Analysis. So that noise mitigation may be considered in the design of new projects, the County shall require an acoustical analysis as part of the environmental review process where: a) Noise sensitive land uses are proposed in areas exposed to existing or projected noise levels that are "generally unacceptable" or higher according to the Chart HS-1: "Land Use Compatibility for Community Noise Environments;" b) Proposed projects are likely to produce noise levels exceeding the levels shown in the County's Noise Control Ordinance at existing or planned noise-sensitive uses.	***Consistent.*** A site-specific, Project-specific acoustical analysis has been prepared as part of the CEQA process for this Project. See Draft EIR Section 3.14, *Noise and Acoustics*, and Appendix J, *Noise*.
Policy HS-H.6: Construction-related Noise. The County shall regulate construction-related noise to reduce impacts on adjacent uses in accordance with the County's Noise Control Ordinance.	***Consistent.*** Short-term construction and decommissioning Project activities would be exempt from the County's noise policies and standards because activities would occur between the hours of 6:00 a.m. and 9:00 p.m. on weekdays, or 7:00 a.m. and 9:00 p.m. on Saturdays and Sundays.
Policy HS-H.8: Noise Levels Compatibility. The County shall evaluate the compatibility of proposed projects with existing and future noise levels through a comparison to Chart HS-1, "Land Use Compatibility for Community Noise Environments."	***Consistent.*** As mitigated, the Project would not exceed County noise standards and would not have a significant impact on noise levels.

I.3.5 Housing Element

The Housing Element provides the County's goals, policies, and programs for the development, improvement, and maintenance of housing within the unincorporated areas of the County. As described in Section 3.15, *Population and Housing*, the Project would neither induce growth nor displace people or housing. No new housing is proposed or would be required as a result of the Project. This element is therefore not applicable to the Project.

I2 Consistency with Fresno County's Solar Facility Guidelines

Heartland Hydrogen Project
Supplemental Information in Response to the
Fresno County Solar Facility Guidelines[1]

The following information is provided as part of the application review process for the Heartland Solar Project:

1. Information shall be submitted regarding the historical agricultural operational/usage of the parcel, including specific crop type and crop yield, for the last ten years (if no agricultural operation in the last ten years, specify when land was last in agricultural use); and

According to information provided by Westlands Water District, the Project property is non- irrigable and thus only capable of being dry farmed. For the past ten years, the Project site has either lain fallow or been dry-farmed for grain crops. The dry-farmed crops include barley, wheat and grain hay. The crop history for 2009 to 2018 is included as Table 1. Westlands did not provide crop yield data however dry-farmed crop yields are typically lower than comparable crops grown with irrigation.

2. Information shall be submitted that identifies the source of water for the subject parcel (surface water from irrigation district, individual well(s), conjunctive system). If the source of water is via district delivery, the applicant shall submit information documenting the allocations received from the irrigation district and the actual disposition of the water (i.e. utilized on-site or moved to other locations) for the last ten years. If an individual well system is used, provide production capacity of each well, water quality data and data regarding the existing water table depth; and

Water needs for the long-term operation of the Solar Facility are expected to be fourteen acre-feet or less per year. It is expected that water for operation of the project will be provided by Westlands Water District under terms of their Municipal and Industrial ("M&I") service agreement. Under the terms of Westlands' M&I agreement[2], the Project would be eligible for up 5 acre-feet, per year, for every 160 acres of land associated with the Project, so the M&I contract would be more than sufficient to meet the Project's anticipated water supply needs. Water purchased by the Solar Facility would be used at the facility site.

Pursuant to Senate Bill 610, a Water Supply Assessment will be prepared as part of the environmental review for the Project.

[1] Version approved by Fresno County Board of Supervisors on December 12, 2017. Accessed at: https://www.co.fresno.ca.us/departments/public-works-planning/divisions-of-public-works-and-planning/development-services-division/planning-and-land-use/photovoltaic-facilities-p-1621

[2] Section 19.4(B); Regulations regarding the application for and use of Municipal and Industrial water within Westlands Water District (https://wwd.ca.gov/wp-content/uploads/2014/12/rules19.pdf)

3. Identify the current status of the parcel (Williamson Act Contract, Conservation Easement, retired land, etc.), the purpose of any easement and limitations of the parcel. The applicant shall submit a Title Report or Lot Book Guarantee for verification; and

When the property was conveyed to the Westlands Water District, any Williamson Act contracts that may have existed at the time were terminated as a matter of law. In 2012, the Board of Supervisors issued a letter to Westlands concurring that the former contracts were deemed "null and void" as of the time these lands were acquired by Westlands.[3] Preliminary title reports for the Project property will be submitted separately as part of the UCUP application.

4. Identify (with supporting data) the current soil type and mapping units of the parcel pursuant to the standards of the California State Department of Conservation and the Natural Resources Conservation Service; and

Based on data provided by the U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS)[4] the predominant soils on the Project site are Tranquility clay (saline-sodic, wet, mapping unit 286) and Calflax clay loam (saline-sodic, wet, mapping unit 482), which together account for more than 80% of the Project area. Other soils include Ciervo clay (saline sodic, wet, mapping unit 461), Posochanet clay loam (saline-sodic, wet, mapping unit 475) and Cerini sandy loam (mapping unit 478) slopes. The soil types will be described and evaluated in greater detail as part of the Land Evaluation System Analysis (LESA) conducted as part of the environmental impact review.

5. List all proposed measures and improvements intended to create a buffer between the proposed solar facility and adjacent agricultural operations (detailed information must be shown on Site Plan) and provide factual/technical data supporting the effectiveness of said proposed buffering measures; and

The Project site is nearly entirely bounded by agricultural uses or public roads. Where the Project site borders agricultural uses, the solar photovoltaic generating components (PV arrays, inverters, etc.) will be set back at least 50 feet from the Project property line.

6. Provide a Reclamation Plan detailing the lease life, timeline for removal of the improvements and specific measures to return the site to the agricultural capability prior to installation of solar improvements; and

A Preliminary Closure, Decommissioning and Reclamation Plan has been separately submitted.

7. Provide information documenting efforts to locate the proposed solar facility on non-

[3] *See* Letter from D. Poochigian to T. Glover (Jan 21, 2012) (County confirmation of Williamson Act contract rescission), available at: http://www2.co.fresno.ca.us/0110a/Questys_Agenda/MG192241/AS192290/AS192292/AI192301/DO192923/DO_192923.PDF.

[4] https://websoilsurvey.sc.egov.usda.gov Accessed April, 2020

agricultural lands and non-contracted parcels and detailed information explaining why the subject site was selected.

The proposed Project is not located on lands subject to a Williamson Act contract. As noted previously, the proposed Project is being sited on land subject to prohibitions on irrigation imposed by the current owner, Westlands Water District, due to lack of drainage services and salt accumulation in the soil. The prohibitions on irrigation were established to benefit higher-quality, more productive agricultural lands by reducing both the number of acres competing for irrigation water and the volume of agricultural drainage discharged to the poorly draining soils in the Project area. Given the inability of the property to reliably and productively produce crops, Westlands has targeted property like the Project site for renewable energy development[5]. The lack of value for either agriculture or wildlife habitat was acknowledged in a recent report developed by multiple stakeholders from the agricultural community, solar industry, environmental organizations, and state government. The resulting report identified the Project site as predominantly "Priority Least Conflict Area" for agricultural farmland and environmental conservation stakeholders—the lowest possible priority for conservation of agricultural and environmental resources under the applicable classification program [6] The site was selected due to these characteristics as well as the proximity to the Tranquility Switching Station.

8. Develop and submit a project site Pest Management Plan to identify methods and frequency to manage weeds, insects, disease and vertebrate pests that may impact adjacent sites.

A Pest Management Plan has been separately submitted.

9. The applicant must acknowledge the County's Right to Farm Ordinance and shall be required to record a Right to Farm Notice prior to issuance of any permits. This shall be included as a recommended Condition of Approval of the land use entitlement.

Noted. This will be included as a condition of approval.

10. Note: The life of the approved land use permit will expire upon expiration of the initial life of the solar lease. If the solar lease is to be extended, approval of new land use permit will need to be obtained.

Noted.

11. *If the project is approved, the applicant shall make all reasonable efforts to establish a point of sale in Fresno County for equipment and construction related items necessary for the project.*

Noted. This will be included as a condition of approval

---

[6] Center for Law, Energy & the Environment, *A Path Forward: Identifying Least-Conflict Solar PV Development in California's San Joaquin Valley* (May 2016), available at https://www.law.berkeley.edu/wp-content/uploads/2016/05/A-PATH-FORWARD-May-2016.pdf

12. *If the project is approved, the applicant shall make all reasonable efforts to conduct local recruitment efforts and/or coordinate with employment agencies in an attempt to hire from the local workforce.*

Noted. This will be included as a condition of approval

13. *In addition to disclosing the number of trips in the required project Operational Statement, the applicant shall disclose the weight of the shipments anticipated to the site. If the project is approved, pursuant to the CEQA analysis and based upon the existing road conditions and the weight/frequency of shipments to the site, the applicant shall mitigate impacts to County roads.*

The Project will involve two distinct phases: a temporary construction phase lasting up to 18-39 months and an operational phase of at least 30 years. During the operational phase, the Project would receive relatively few shipments, consisting mostly of parts and equipment necessary for maintenance activities.

The majority of shipments, including the heavier loads, would occur during the construction phase. The anticipated number of shipments during Project construction will be included in the Air Quality and Greenhouse Gas Analysis Technical Report, which will be prepared as part of the environmental impact review. At this time, it is estimated there will be approximately 450 construction deliveries (panel modules, posts, cables, etc.) during construction, with a typical truck weight of 50,000 pounds. The heaviest shipments—delivery of the substation transformers—will weigh as much as 190,000 pounds each.

Additionally, the Applicant will coordinate with the County and the California Department of Transportation to review the expected construction-related trips and proposed delivery routes. This consultation will occur prior to preparation of the Traffic Technical Report, which will also be included in the environmental impact review.

14. *If the project is approved, the applicant shall make all reasonable efforts to purchase products and equipment from local (Fresno County) manufacturing facilities and/or vendors.*

Noted. This will be included as a condition of approval

MEMORANDUM

To:	Deandra Cass (Clearway Energy)
From:	Mark Storm, INCE Bd. Cert. (Dudek)
Subject:	Heartland Solar Project **Operational Noise Prediction Technical Memorandum**
Date:	August 29, 2025
cc:	Peter Todd (Clearway Energy)
Attachment(s):	Figure 1 – Isometric View of Modeled Project PV Solar PCS, BESS, and Substation Noise-Producing Sources and Sound-Occluding Obstacles Figure 2 – Sample Project Operation Prediction Scenarios A. Glossary of Acoustical Terms B. CadnaA Sound Propagation Model Input Worksheets C. Hourly L_{eq} Calculation Worksheets D. Plots of Unattended 24-hour Baseline Outdoor Ambient Sound Levels E. Photographs of Unattended 24-hour Sound Monitor Deployments F. "Forms" Field Notes and Photographs of Attended Baseline Sound Level Measurements

Clearway Energy (Clearway), the owner and applicant for the Heartland Solar Project (Project) located in western Fresno County (County), engaged Dudek to update an earlier operational noise prediction study of the Project that it had prepared for a previous owner. The revised Project design layout retains its earlier arrays of photo-voltaic (PV) solar panels spanning the Project property on both north and south sides of West Adams Avenue, but now includes a battery energy storage system (BESS) facility adjoining the south side of this roadway segment.

This Operational Noise Prediction Technical Memorandum (memo) describes the regulatory setting for the Project with respect to potential environmental noise impacts due to post-construction operation of its facilities, and the methodology and results from development of a three-dimensional sound propagation model (using commercially available Datakustik CadnaA software) of aggregate noise emission from these anticipated operating Project facilities associated with the PV solar electricity generation inverters, collector substation transformers, and the onboard cooling systems of the BESS battery container units and their associated but physically separate medium voltage transformers (MVT). These predictions include Project-attributed operation noise exposure levels at the two nearest offsite residential receptors (R1 and R2), which are then compared with relevant noise impact assessment criteria based on the local applicable standards.

Attachments to this memo include: A) a glossary of relevant noise descriptors to help provide the reader context with respect to the analyses and findings presented herein; B) predictive modeling inputs and source definition worksheets; C) a calculation worksheet presenting predicted Project operation noise results (as successive hourly energy-equivalent [L_{eq1hr}] values) for an anticipated "hottest day" environmental condition; D) plots of 24-hour

outdoor ambient sound levels collected by unattended sound level monitors in the vicinities of offsite receptors R1 and R2; and E) field notes and photographs from investigator-attended sound level measurement samples at R1 and R2.

Regulatory Setting

As appearing in Exhibit A, Chapter 8.40 – Noise Control of the County code features exterior noise level standards that would apply to Project-attributed operation noise exposure levels within 50 feet of offsite noise-sensitive receptors (NSR) that include affected residences, schools, hospitals, churches or public libraries.

Exhibit A

FRESNO COUNTY EXTERIOR NOISE LEVEL STANDARDS

Cumulative min/hr (Lx)	Daytime 7 a.m. to 10 p.m.	Nighttime 10 p.m. to 7 a.m.
30 (L_{50})	50	45
15 (L_{25})	55	50
5 ($L_{8.3}$)	60	55
1 ($L_{1.7}$)	65	60
0 (L_{max})	70	65

NOTE:
In the event the measured ambient noise level exceeds the applicable noise level standard in any category above, the applicable standard shall be adjusted so as to equal the ambient noise level.

SOURCE: Fresno County 1978.

Because the major noise-producing sources associated with Project tend to be equipment that operates continuously and in a steady-state manner, the predicted aggregate sound levels (understood to be energy-equivalent levels [L_{eq}]) at a studied NSR would be compared directly with the quantified standards appearing in Exhibit A and thus consistent with Section 8.40.040.D from the County code. For such continuous sources of noise, one would generally expect an hourly L_{eq} value to be comparable to the hourly median sound level (i.e., the L_{50} statistical value, which refers to the dB exceeded for a cumulative fifty percent [50%] of a measured hour).

Project Operations Prediction

Methodology

Predictive analysis of Project operation noise first requires the evaluation of aggregate noise emission representing scenarios when onsite BESS charging or discharging may occur and under outdoor ambient climate conditions requiring their cooling systems are functioning at a specific and constant delivered capacity, with values incrementally ranging from zero (0) to ninety percent (90%). During such periods, this assessment presumes the PCS and MPT are also operating normally and emitting noise under typical loads.

Once these energy-equivalent levels (L_{eq}) for the Project are predicted for a set of these different BESS cooling capacity cases under assumed constant operation, the values are then used as inputs to a Microsoft Excel spreadsheet that calculates expected noise emission for each successive hour across a "hottest day", within which BESS cooling capacities are forecast and vary throughout the daytime and nighttime in a 24-hour timeframe.

CadnaA Sound Propagation Model

Dudek received from Clearway site plan information (via .dwg file), an independent test report that provided reference sound pressure levels (SPL) and sound power levels (PWL) for each of the two proposed collector substation transformers (a.k.a., main power transformers [MPT]), and reference PWL data from the proposed supplier of battery containers for a range of cooling capacity settings (a.k.a., fan speeds). With these inputs, Dudek modeled the propagation of aggregate operating sound emission from a combination of Project PV solar power conversion systems (PCS), substation transformer, and BESS noise sources with commercially available Datakustik CadnaA software, which incorporates relevant International Organization of Standardization (ISO) 9613-2 algorithms and reference data that are generally considered to be industry standard for outdoor noise modeling. Key modeling assumptions and parameters are detailed in the following paragraphs.

PV Solar PCS

Each "block" of PV solar panel arrays in the Project areas north and south of W. Adams Avenue is served by a PCS comprising an inverter/transformer as the major steady-state noise emission source. (Other electrical equipment onsite, such as switches, would produce noise only occasionally and thus not contribute substantially to overall PV system noise emission.) Each PCS is modeled in CadnaA as a small point-type source set at five feet (5') above local grade elevation and emits sound at a magnitude comparable to levels from manufacturer test data from a leading supplier that Dudek has previously utilized on similar renewable energy projects. The approximate positions of these rendered PCS units across the Project site appear in Figure 1.

Collector Substation Transformers

As shown in Figure 1, the Project anticipates the installation of two MPT east of the BESS facility near the south side of W. Adams Avenue. Each is idealized as a point-type source, with octave band center frequency (OBCF) PWL values appearing in Attachment B.

BESS Facility

The BESS facility comprises 224 individual battery container units, served by 56 MVTs (at a 4-to-1 ratio). Side-by-side pairs of battery containers are modeled as "blocks" in the CadnaA model space, with outward-facing horizontal and vertical areas of sound emission that align with reference sound data from the intended manufacturer. The MVTs are modeled as individual blocks (i.e., having dimensions comparable to common equipment of its type) with top-mounted area sources representing their operating sound emission. Attachment B presents OCBF details.

Modeling Assumptions

- All noise sources are assumed to operate in a steady-state or otherwise continuous manner, so that the predicted energy-equivalent level (L_{eq}) may be compared directly with the County's L_{50} standard for daytime or nighttime periods. In other words, because a constant source of sound emission produces the same

measurable noise level each of every successive time interval, the energy-averaged dB value of the "stack" of intervals should be the same as the median or 50th-percentile of that stack of interval dB values.

- Acoustical ground absorption of the Project site (modeled as flat, which generally approximates the site terrain characteristics) is set at zero, which on a zero (smooth, non-porous, reflective) to one (porous, absorptive) scale conservatively approximates the aggregate expanse of smooth and reflective PV panel surfaces and paved access roads. Beyond the Project site area, the surrounding terrain (also rendered as flat topography) has been assigned an estimated average ground absorption coefficient of 0.5, to characterize the combination of hard-packed and loosely-tilled or grass-covered soils and includes the presence of a few paved roadway segments.

- Meteorological conditions presume "calm" wind conditions (i.e., less than 0.5 meters per second in any direction) and average air temperature and relative humidity of 68 degrees Fahrenheit and 70%, respectively.

- The model "configuration" settings include reflection order set to "1", which can be interpreted to mean that a sound emission path from a source will continue to be analyzed after impingement upon and reflection from the first intervening structure or barrier.

"Hottest Day" Successive Hourly Estimates

Dudek received from Clearway two different forecasts (from the intended supplier) of aggregate battery container cooling system operation over the course of an anticipated "hottest day" 24-hour period. Attachment C presents approximations of these anticipated cooling capacities, and their durations in each successive hour, as inputs for calculations of the hourly L_{eq} noise exposure values at each of the two studied offsite receptor positions (R1 and R2).

CadnaA Prediction Results

Figure 2 displays CadnaA-predicted noise propagation contours associated with onsite Project operation of major noise-producing sources as studied herein that include two of the battery container cooling capacity scenarios: operation at 40% and 90%, respectively. Under the 40% battery container cooling capacity case, the noise exposure magnitude at R1 is predicted to be 37.8 dBA, and 37.5 dBA at R2. If such operation at this capacity was constant for a full hour, these dBA magnitudes would be the hourly L_{eq} values as well. For the 90% cooling capacity case, the predicted exposure at R1 would be 42.2 dBA, and 47.1 dBA at R2. As Figure 2 illustrates, the predicted noise exposure at location R2 becomes higher than R1 for the 90% cooling capacity scenario because of its proximity to the BESS facility. Under the 40% cooling capacity scenario, the aggregate BESS noise emission is substantially quieter, and enables the PCS nearest to R1 to be the dominant acoustical contributor and thus cause its exposure level to be greater than that predicted for R2.

"Hottest Day" Hourly Evaluation

Reflecting application of the more conservative (i.e., generating higher sound exposure levels) of the two battery container cooling operation forecasts for a "hottest day" scenario, Attachment C presents the calculated hourly L_{eq} values at offsite positions R1 and R2. These are logarithmic sums of the shown CadnaA-based predictions of sound magnitudes for the anticipated battery cooling capacities and their durations for each successive hour of the

studied 24-hour period. At R1, the hourly levels range from 37 dBA to 41 dBA, with the latter occurring in the 9 a.m. to 1 p.m. period. At R2, the hourly levels range from 36 dBA to 46 dBA, with the latter similarly happening during this 4-hour period and concurrent with expected battery charging or discharging process.

Environmental Impact Assessment

County Fixed Threshold Compliance

Compared to the daytime 50 dBA L_{50} fixed threshold for Fresno County as appearing in Exhibit A, which this assessment interprets as being comparable to an hourly L_{eq} limit, the highest predicted hourly L_{eq} values from Attachment C for R1 and R2 locations are compliant. Exposure levels during nighttime operation (10 p.m. to 7 a.m.) are also compliant with the more stringent 45 dBA threshold.

Project-attributed Increase over Ambient

Establishing Baseline

Measurements of baseline (a.k.a., pre-Project) SPL were conducted in the vicinities of R1 and R2 over the course of an overnight field survey from August 19-20, 2025 to quantify and characterize the existing outdoor ambient sound environment at these two studied offsite receiver positions. Plots of the collected data, expressed as hourly A-weighted metrics and statistical values, appear in Attachment D and were measured with American National Standards Institute (ANSI) Type 2 sound level meters (SLM) deployed at each receiver location as shown in Attachment E.

Additionally, short-duration SPL measurements were performed by an attending Dudek field investigator using a Rion-branded Model NL-62 sound level meter (SLM) equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The SLM meets the current ANSI standard for a Type 1 SLM. The accuracy of the SLM was verified using a field calibrator before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground. Data, field notes, and photographs of these survey positions appear in Attachment F.

According to the plots appearing in Attachment D, the quietest nighttime hour at LT1 (R1) is 12:00 a.m. with an L_{50} value just under 35 dBA, and an hourly L_{eq} of 55 dBA. At LT2 (R2), the quietest nighttime hour starts at 10:00 p.m. and has an L_{50} value of 43 dBA, with a corresponding hourly L_{eq} of 52 dBA.

Evaluating Increase over Baseline Ambient

As shown in Attachment C, the predicted hourly L_{eq} range for Project operations during nighttime hours (10 p.m. to 7 a.m.) is 37 to 38 dBA for R1, and ranges between 36 dBA and 38 dBA for R2. Tables 1 and 2 show the results of logarithmically adding the upper values of these predicted hourly L_{eq} ranges to the measured quietest samples of baseline outdoor ambient sound level—for both L_{50} and L_{eq} values—as summarized in the preceding paragraphs.

Table 1. Future Outdoor Ambient Noise (L_{50}) including Project Operations

Receptor Location Tag	Receptor Type	Measured Quietest Baseline Outdoor Ambient Hour (dBA, L_{50}) at the Receptor		Predicted Highest Project Operations (dBA, hourly L_{eq})		Logarithmic Sum of Baseline and Project Operations (dBA, hourly L_{50})		Increase over Ambient (dB):	
		Day	Night	Day	Night	Day	Night	Day	Night
R1	Residence	35	35	41	38	42	40	7	5
R2	Residence	43	42	46	38	48	43	6	5

Notes: dBA = A-weighted decibel; L_{eq} = energy-equivalent sound level; L_{50} = sound level exceeded a cumulative fifty percent (50%) of the time.

Table 2. Future Outdoor Ambient Noise (L_{eq}) including Project Operations

Receptor Location Tag	Receptor Type	Measured Quietest Baseline Outdoor Ambient Hour (dBA, L_{eq}) at the Receptor		Predicted Highest Project Operations (dBA, hourly L_{eq})		Logarithmic Sum of Baseline and Project Operations (dBA, hourly L_{eq})		Increase over Ambient (dB):	
		Day	Night	Day	Night	Day	Night	Day	Night
R1	Residence	57	55	41	38	57	55	<1	<1
R2	Residence	55	47	46	38	55	48	<1	1

Notes: dBA = A-weighted decibel; L_{eq} = energy-equivalent sound level.

With respect to a potential change in the outdoor sound environment as described with L_{50} values, the predicted daytime hour increases attributed to Project operation noise at R1 and R2 are no greater than 7 dB in Table 1 and thus below the allowable ten-decibel increase. At night, the predicted increases are no greater than 5 dB and thus compatible with that limit on allowable decibel increase.

When evaluated with respect to L_{eq} values, the predicted increases shown in Table 2 for R1 and R2 are no greater than one decibel.

For the above reasons, Project operation even under anticipated "hottest day" conditions is expected to create increases over existing outdoor ambient levels that are compatible with the County's 10 dB expected increase cap during daytime hours, and a 5 dB increase cap during nighttime hours.

Evaluating Compatibility with Residential Outdoor CNEL

The Fresno County General Plan CNEL-based community noise exposure level considers the contributions of daytime and nighttime noise levels. The maximum allowable noise exposure level for residential land uses is 60 CNEL. As shown in Attachment C, the CNEL values calculated from predicted Project operations hourly L_{eq} over the course of a 24-hour period are 44.7 dBA for R1 and 45.2 dBA for R2. Both of these CNEL are well below 60 dBA exterior exposure standard for the County; and, these predicted CNEL values associated with Project operations are less than the CNEL values derived from the available hourly L_{50} data shown in the plots of Attachment D. For example, at R1, the CNEL calculated from hourly L_{50} values is 48 dBA and thus higher than that of the anticipated Project operations contribution.

Additional Notes (R3)

An earlier environmental assessment of the Project, prepared by ESA in 2022, considered an additional "R3" offsite residential receptor position located over 8,000 feet south of the Project site southern boundary at the intersection of West Dinuba Avenue and Rte. 33 (S. Derrick Ave.). Due to its much larger distance from the Project than R1 and R2, and per acoustical principles of sound attenuation with distance, R3 is also expected to receive Project operation noise exposures that are compliant with County fixed thresholds and the increase-over-ambient cap expectation.

Should you have any questions, comments, or suggestions on how this memo could better suit your needs, please do not hesitate to contact me at mstorm@dudek.com.

Sincerely,

Mark Storm, INCE Bd. Cert.
Acoustic Services Manager

Attachment A – Glossary of Common Acoustical Terms

Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
A-Weighted Sound Level (dBA)	The sound pressure level (SPL) in decibels as measured on a sound level meter (SLM) using the A-weighted filter network, which de-emphasizes the very low and very high frequency components of the measured sound in a manner similar to the frequency response of the average healthy human ear.
Background Sound Level	The amalgam of sounds from indistinct and/or distant sources (e.g., roadway traffic, residential HVAC systems, etc.) that are not nearby or are otherwise the focus of study.
Decibel (dB)	The unit for expressing SPL and is equal to 10 times the logarithm (to the base 10) of the ratio of the measured sound pressure squared to a reference pressure, which is 20 micropascals.
Equivalent Sound Level ($L_{eq[xh]}$)	The value corresponding to a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. The L_{eq} may feature notation in its subscript indicating the time period (e.g., eight hours as "8h" to populate "[Xh]") of energy averaging.
Octave Band Center Frequency (OBCF)	Commonly discussed octave frequency bands are: 31.5 Hz, 63 Hz, 125 Hz, 250 Hz, 500 Hz, 1 kHz, 2 kHz, 4 kHz, 8 kHz and 16 kHz. Each of these "center frequencies" represents an octave band defined by a lower band limit equal to 0.707 times the center frequency, and an upper band limit equal to 1.414 times the center frequency.
Statistical Sound Level (L_{XX})	A sound level exceed for a cumulative XX percentage of time within a defined measurement period. The L50 ("L-fifty") value is thus often called the "median" sound level; and the L90 ("L-ninety") value is a dB level exceed 90% of the measurement period and hence typically used to evaluate specific continuous or steady-state sound sources, or describe the background sound level (see above definition).

1.0 Introduction

1.1 Description of the Region/Project

This Transportation Impact Study (TIS) has been prepared for the purpose of analyzing traffic conditions related to the Heartland Hydrogen Solar Project (Project) proposed to develop in Fresno County.

Plans call for the project to construct, operate, maintain, and decommission facilities to generate hydrogen fuel from renewable sources (using photovoltaic [PV] solar energy and treated wastewater) on approximately 2,371 acres of private land in western Fresno County. The Project is located approximately 6.5 miles south of the City of Mendota, and immediately west of State Route 33 (SR 33, also called S. Derrick Avenue). Two locations, together totaling approximately 2,371 acres, are proposed for Project development: City of Mendota-owned property within the City of Mendota Wastewater Treatment Plant (MWWTP) and other property currently owned by the Westlands Water District (WWD) in unincorporated western Fresno County.

Construction activity related to the MWWTP is expected to generate less than 50 total trips per day at any point in the construction process. Therefore, the transportation impacts of this portion of the project are considered to be insignificant and the remainder of the study focuses on analysis of the construction of the solar and hydrogen portions of the project.

Figure 1-1 shows the site's regional context. Figure 1-2 shows the Project location within Fresno County. The project site plan is shown in Appendix A. This TIS is prepared to anticipate the impacts associated with the trips generated during construction of the project.

Following is more detail from the Project Description.

The Project would be capable of producing approximately 30,000 kilograms per day (kg/d)1 of renewable hydrogen for zero emission transportation fuel to be used by fuel-cell electric vehicles operating throughout California. The Project would rely on renewable energy produced by PV solar modules to convert sunlight into electricity, which would be used to split the recycled water into hydrogen and oxygen (electrolysis).

1.1.1 *Project Access*

Primary Project access will be provided at two points along West Adams Avenue. One access point will be west of SR 33 and will provide access to construction activities that take place north and south of Adams Avenue. Some access will also be provided along South Ohio Road. In order to provide a conservative analysis, all project trips were assumed to take access along West Adams Avenue with the intersection at SR 33 acting as the connection point to the remainder of the roadway network.

1.1.2 *Study Area*

The following intersections included in this TIS were determined in consultation with Fresno County staff and include:

Intersections

- ✓ W. Adams Avenue and Derrick Avenue (SR 33)
- ✓ Manning Avenue and Derrick Avenue (SR 33)
- ✓ W. Adams Avenue and Project Access

1.1.3 *Study Scenarios*

The study time periods for the traffic analysis included the weekday AM and PM peak hours determined between 7:00 and 9:00 AM and between 4:00 and 6:00 PM. Level of service analysis for the AM and PM peak hours was analyzed for the following scenarios:

- ✓ Existing Conditions
- ✓ Near-Term Conditions Plus Project Construction Traffic

It should be noted that cumulative developments being built in the vicinity of the project might impact if the peak construction activity occurs at the same period. So, the cumulative impacts from those developments during their peak construction phase are further analyzed and results are included in Appendix E.

1.2 Methodology

When preparing a TIS, guidelines set by affected agencies are followed. In analyzing street and intersection capacities the Level of Service (LOS) methodologies from Highway Capacity Manual (HCM) 6th Edition were applied. The Fresno County LOS standards were applied by transportation agencies to quantitatively assess a street and highway system's performance by rating intersections on a scale of LOS "A" through "F". In addition, safety concerns are analyzed to determine the need for appropriate mitigation resulting from increased traffic near sensitive uses. The trips generated by the project during the operation would be minimal, so this analysis focuses on the trips generated during construction of the project.

1.2.1 *Intersection Analysis*

Intersection LOS analysis was conducted using the Synchro 10 software program. Synchro 10 supports the Highway Capacity Manual (HCM) 6th Edition methodologies and is an acceptable program by Fresno County staff for assessment of traffic effects of projects. Levels of Service

were determined for signalized and unsignalized intersections, as shown in Figure 2-1. It should be noted that the two of the intersections we are studying are currently unsignalized and one of them only exist after the project will be developed.

Tables 1-1 and 1-2 define LOS "A" to "F" by indicating the ranges in the amounts of average delay for a vehicle at signalized and unsignalized intersections for each level of service ranging from LOS "A" to "F".

When an unsignalized intersection does not meet acceptable LOS standards, the investigation of the need for a traffic signal shall be evaluated. The California Manual on Uniform traffic Control Devices for Streets and Highways (California MUTCD) introduces standards for determining the need for traffic signals. The California MUTCD indicates that the satisfaction of one or more traffic signal warrant doesn't in itself require the installation of traffic signal. In addition to warrant analysis, an engineering study of current or expected traffic conditions should be conducted to determine whether the installation of a traffic signal us justified. The California MUTCD Peak Hour Warrant (Warrant 3) was used to determine if a traffic signal is warranted at unsignalized to fall below current LOS standards.

1.3 Policies to Maintain Level of Service

An important goal is to maintain acceptable level of service along the highways, street, and road network. To accomplish this, the Fresno County adopted minimum levels of service in an attempt to control congestion that may result as new development occurs. The project area is served by Fresno County and its General Plan states the minimum LOS is "D".

1.4 Vehicle Miles Traveled (VMT) Analysis

Senate Bill 743 (SB 743) went into effect throughout California on July 1, 2020. This legislation changed the performance measure for CEQA transportation studies from level of service to vehicle miles traveled (VMT). An assessment of potential VMT impacts associated with the Project is provided in Chapter 3 to address CEQA requirements.

Table 1-1
Signalized Intersections Level of Service Definitions (Highway Capacity Manual)

LEVEL OF SERVICE	DEFINITION		AVERAGE TOTAL DELAY (sec/veh)
A	Describes operations with very low delay. This level of service occurs when there is no conflicting traffic for a minor street.		≤ 10.0
B	Describes operations with moderately low delay. This level generally occurs with a small amount of conflicting traffic causing higher levels of average delay.		> 10.0 - 20.0
C	Describes operations with average delays. These higher delays may result from a moderate amount of minor street traffic. Queues begin to get longer.		> 20.0 - 35.0
D	Describes a crowded operation, with below average delays. At level D, the influence of congestion becomes more noticeable. Longer delays may result from shorter gaps on the mainline and an increase of minor street traffic. The queues of vehicles are increasing.		> 35.0 - 55.0
E	Describes operations at or near capacity. This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor gaps for the minor street to cross and large queues.		> 55.0 - 80.0
F	Describes operations that are at the failure point. This level, considered to be unacceptable to most drivers, often occurs with over- saturation, that is, when arrival flow rates exceed the capacity of the intersection. Insufficient gaps of suitable size exist to allow minor traffic to cross the intersection safely.		> 80.0

Table 1-2
Unsignalized Intersections Level of Service Definitions (Highway Capacity Manual)

LEVEL OF SERVICE	DEFINITION	AVERAGE TOTAL DELAY (sec/veh)
A	No delay for stop-controlled approaches. 	0 - 10.0
B	Describes operations with minor delay. 	> 10.0 - 15.0
C	Describes operations with moderate delays. 	> 15.0 - 25.0
D	Describes operations with some delays. 	> 25.0 - 35.0
E	Describes operations with high delays and long queues. 	> 35.0 - 50.0
F	Describes operations with extreme congestion, with very high delays and long queues unacceptable to most drivers. 	> 50.0

2.0 Existing Conditions

2.1 Existing Traffic Counts and Roadway Geometrics

The first step toward assessing Project traffic impacts was to assess existing traffic conditions. Existing AM and PM peak hour turning movements were collected at each Project intersection by National Data and Surveying Services. Traffic counts were conducted for the peak hour periods of 7:00-9:00 AM and 4:00-6:00 PM for all key intersections. Counts of the intersections were taken on Thursday, March 30, 2023.

Traffic count data worksheets are provided in Appendix B.

2.2 Affected Streets and Highways

Street and highway intersections and segments near and adjacent to the Project site were analyzed to determine levels of service utilizing HCM-based methodologies described previously. The study intersections included in this TIS are listed below.

Intersections

- ✓ W. Adams Avenue and Derrick Avenue (SR 33)
- ✓ Manning Avenue and Derrick Avenue (SR 33)
- ✓ W. Adams Avenue and Project Access

The existing lane geometry at study area intersections is shown in Figure 2-1. Figures 2-2 and 2-3 shows existing traffic volumes for the AM and PM peak hours in the study area.

2.3 Level of Service

2.3.1 *Intersection Capacity Analysis*

All intersection LOS analyses were estimated using Synchro Software. Various roadway geometrics, traffic volumes, and properties (peak hour factors, storage pocket length, etc.) were input into the Synchro Software program to accurately determine the travel delay and LOS for each Study scenario. The intersection LOS and delays reported represent the HCM outputs. Synchro assumptions, listed below, show the various Synchro inputs and methodologies used in the analysis.

- ✓ **Lane Geometry**
  - Storage lengths for turn lanes for existing intersections were obtained from aerial photos and rounded to the nearest 25 feet
  - VRPA conducted a field study of the specified intersections and segments to verify lane

geometry and intersection control.

✓ **Traffic Conditions**

- Peak hour factors (PHF) for each intersection approach were obtained from traffic counts in the study area and were utilized for Existing Conditions and Near-term (Opening Year) Plus Project Construction Traffic conditions.
- Heavy vehicle percentages were applied as follows and are based on HCM default (3%)
- Roadway link speed limits were observed in the field and input into the Synchro network to determine roadway link speeds
- The traffic volumes for Heavy Trucks were converted to passenger car equivalent estimated at rate of 3.0 for each truck.

Results of the analysis show that all of the study intersections currently operate below LOS B. Fresno County's minimum level of service criteria is LOS 'D' during the peak hour. Table 2-1 shows the intersection LOS for the existing conditions. Synchro 10 (HCM 6th Edition) Worksheets are provided in Appendix D.

Table 2-1
Heartland Hydrogen Solar Project
Existing Intersection Operations

INTERSECTION	CONTROL	TARGET LOS	PEAK HOUR	EXISTING	
				DELAY	LOS
SR 33 and Adams Avenue	Two- Way Stop	D	AM	10.2	B
			PM	10.4	B
SR 33 and Manning Avenue	Two-Way Stop	D	AM	10.4	B
			PM	12.1	B
Adams Avenue and Project Access	One-Way Stop	D	AM	Does not Exist	
			PM		

DELAY is measured in seconds

LOS = Level of Service / **BOLD** denotes LOS standard has been exceeded

* No traffic were observed in cross street, so LOS A is assumed in such intersections

For stop controlled intersections, delay results show the delay for the worst movement

3.0 Traffic Impacts

This chapter provides an assessment of the traffic the Project is expected to generate and the impact of that traffic on the surrounding street system.

3.1 Trip Generation

To assess the impacts that the Project may have on the surrounding roadway network, the first step is to determine Project trip generation. Project trip generation was determined using the construction worker/truck trip information provided by the Project description, peak hour splits and directional distribution was done using Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition). The results are shown in Table 3-1. Trip generation information from the Project Description is included in Appendix D.

The following assumptions were made to determine project trip generation:

- ✓ Daily construction trips for employees and trucks were based on the peak month of construction operations (Month 4) per the Project Description. A copy of the employee and truck trip analysis from the Project Description is included in the attachments.
- ✓ The percentage of employee and truck trips in the AM and PM peak hours and the directional distribution were determined based on the General Light Industrial category from the ITE trip generation manual based on a development from this category that would generate the same number of trips as the Project.
- ✓ A calculation of passenger car equivalents (PCE's) was included in the trip generation. Construction trucks were assumed to have a PCE value of 3.0.

3.2 Trip Distribution

Project trip distribution is shown in Figure 3-1 and is based upon knowledge of the study area, engineering judgement, prevailing traffic patterns in the study area, major routes, population centers, and other existing development.

Primary project access will be provided at two points along West Adams Avenue. Some access will also be provided and along South Ohio Road. In order to provide a conservative analysis, all project trips were assumed to take access along West Adams Avenue with the intersection at SR 33 acting as the connection point to the remainder of the roadway network.

3.3 Project Traffic

Trips generated during the construction phase of the Project were distributed to the roadway system using the trip distribution percentages shown in Figure 3-1. This results Project traffic in weekday AM and PM peak hour. The Project generates 246 AM peak hour trips and 216 PM peak hour trips during the construction phase. A graphical representation of the resulting AM and PM peak hour Project trips is shown in Figures 3-2 and 3-3.

3.4 Near Term Conditions Plus Project Construction Traffic

The impacts of the Project were analyzed considering Near term traffic conditions corresponding with the peak of construction activity. For the purposes of the traffic analysis, this was assumed to occur in 2024. The levels of traffic expected in 2024 relate to the cumulative effect of traffic increases resulting from the implementation of the General Plans of local agencies, including the Fresno County, were derived by applying an annual growth rate of 2% per year. The traffic generated by the project in construction phase was added to the 2024 counts to analyze the impacts in the study area which are further analyzed. The resulting traffic is shown in Figures 3-4 and 3-5.

It should be noted that there were two cumulative developments being built in the vicinity of the project that might impact if the peak construction activity occurs at the same period. The cumulative impacts of those developments during their peak construction phase are further analyzed and results are included in Appendix E. The results indicate the possibility of level of service E and F conditions if construction activity peaks for the Project and the cumulative projects at the same time. A potential solution if this were to occur would be the use of temporary traffic control personnel.

3.5 Impacts

3.5.1 *Intersection Capacity Analysis*

Table 3-2 shows the results of the intersection capacity analysis for the above-described scenarios. Results of the analysis show that all intersections would operate below the target level of service with the project in the existing and Near-term condition. Therefore, no impacts are associated with respect to the construction of the project.

Synchro capacity analysis worksheets are shown in Appendix C.

3.6 Vehicle Miles Traveled (VMT) Analysis

Senate Bill 743 (SB 743) went into effect throughout California on July 1, 2020. This legislation changed the performance measure for CEQA transportation studies from level of service to vehicle miles traveled (VMT).

Many agencies throughout California have prepared or adopted specific guidelines for VMT analysis to meet the requirements of SB 743. For agencies that do not have their own guidelines, typical practice is to use statewide guidance for VMT analysis. The State of California Governor's Office of Planning and Research (OPR) provided guidance on VMT analysis titled *Technical Advisory on Evaluating Transportation Impacts in CEQA* dated December 2018 (OPR Guidelines). Since Fresno County does not have specific guidance for VMT analysis, the OPR Guidelines were used in this analysis.

It should be noted that the Fresno Council of Governments (Fresno COG) has completed a document titled *Fresno County SB 743 Implementation Regional Guidelines* dated January 2021 that provides guidance on VMT analysis conducted within the Fresno COG region (including the unincorporated area of Fresno County). This guidance is advisory only and individual agencies within the County may choose whether to follow Fresno COG's guidance or use some other methodology for VMT analysis. Fresno County has not approved the use of the Fresno COG guidance.

It should also be noted that truck trips are excluded from VMT analysis per the OPR Guidelines. Therefore, the discussion that follows applies only to employee trips.
For the purposes of the transportation analysis, the project is being analyzed as a construction project. Once construction is complete and regular operations have started, traffic levels associated with operation of the project will not be large enough to require analysis of traffic operations or VMT. During regular options, the solar portion of the project will have 3 employees on a typical day and the hydrogen facility will have 40 employees on a typical day. These 43 employees would be expected to generate 86 daily trips, not including any reductions for carpooling. According to the OPR Guidelines, any project generating less than 110 trips per day can be presumed to have a less than significant impact on VMT.

The OPR Guidelines do not provide and specific guidance for VMT analysis of construction projects. The guidelines do provide some guidance that could apply to VMT analysis for the project follows:

- ✓ "Of land use projects, residential, office, and retail projects tend to have the greatest influence on VMT. For that reason, OPR recommends the quantified thresholds described above for purposes of analysis and mitigation. Lead agencies, using more location-specific information, may develop their own more specific thresholds, which may include other land use types."

- ✓ "To assist in the determination of significance, many lead agencies rely on "thresholds of significance." The CEQA Guidelines define a "threshold of significance" to mean "an identifiable **quantitative, qualitative or performance level** of a particular environmental effect, non-compliance with which means the effect will ***normally*** be determined to be significant by the agency and compliance with which means the effect ***normally*** will be determined to be less than significant." (CEQA Guidelines, § 15064.7, subd. (a) (emphasis added).)"

- ✓ "Generally, qualitative analyses should only be conducted when methods do not exist for undertaking a quantitative analysis."

Since there is no specific guidance for VMT analysis for construction projects and therefore no methodology for a quantitative analysis, a qualitative VMT analysis was used. This analysis follows:

- ✓ CEQA technical analyses typically compare conditions with the project to a no build scenario in which the project would not be built. In this case, the no build condition would result in no construction trips to the project site. However, in a no build condition it would be reasonable to assume that the construction workers who would have built the project would be employed elsewhere on different project sites. There is no reason to believe that construction at different project site would result in shorter trips or lower levels of VMT. The most likely scenario is that the no build condition would include construction trips and VMT generation similar to what would occur if the project were built.

- ✓ If the project were to cause an increase in VMT, no matter how large or small, the VMT increase would be temporary. Even with a construction period of 14 months, the period of VMT generation would be less than 6% of a permanent residential, office, or retail development that would be built at the same time as the project and would be in place through the horizon year of 2046.

Since the project's VMT generation would similar to the VMT generation in a no build scenario and because any increases in VMT would be temporary, the VMT impact of the project is considered to be less than significant. No mitigation measures related to VMT are needed.

3.7 Pavement Analysis

Projects that generate a substantial amount of truck activity typically include an analysis of the effect of the project on pavement on County roads. In this case, the only County roadway that would be affected is the segment of Adams Avenue between the Project site and SR 33. In the project description, it is stated that this section of the roadway will be improved as part of the construction process.

4.0 Mitigation

Based on the results of Chapters 1 through 3, all intersections in the traffic analysis study area are expected to operate at target levels of service or better with the project in the existing and all Near term scenarios. Therefore, no mitigation measures are needed.

Cumulative Developments Impact Memo

MEMORANDUM

TO: Janna Scott, Environmental Science Associates

FROM: Erik Ruehr, P.E., VRPA Technologies, Inc.
Nisha Pathak, VRPA Technologies, Inc.

DATE: May 3, 2023

RE: Heartland Hydrogen Cumulative Development Traffic Analysis

VRPA Technologies, Inc. (VRPA) has prepared a traffic analysis during peak construction activity of the cumulative projects and proposed Heartland Hydrogen Project. This memorandum provides detailed analysis on cumulative project traffic, calculations for signal warrant and results.

This analysis was conducted to analyze the worst-case scenario of construction traffic when the construction of cumulative projects overlaps with the construction period of Heartland Hydrogen Project. The analysis is studied for the following intersections in the vicinity of proposed Heartland Hydrogen Project:

- W. Adams Avenue and Derrick Avenue (SR 33)
- Manning Avenue and Derrick Avenue (SR 33)
- W. Adams Avenue and Project Access

CUMULATIVE PROJECT TRAFFIC

This analysis includes the addition of two proposed developments near the Heartland Hydrogen Development, a proposed Scarlet Solar Facility to be constructed on 4089 acres of land on the south and Sonarisa Solar Park to be constructed on west side(hereafter called “cumulative projects”). Exhibit 1 shows the location of the cumulative Projects with respect to the proposed Heartland Hydrogen Project. The trip generation for these two projects is based on previously approved traffic studies. Resulting Trips on the studied intersection are shown in Exhibit 2 and 3 Finally, the addition of the cumulative projects with Heartland Hydrogen trips in the construction year is shown in Exhibit 4.

INTERSECTION CAPACITY ANALYSIS

The impacts of the Project were analyzed considering Near term traffic conditions corresponding with the peak of construction activity. For the purposes of the traffic analysis, this was assumed to occur in 2024.

4630 W. Jennifer, Suite 105, Fresno, CA 93722 · Phone (559) 271-1200 · Fax (559) 271-1269
www.vrpatechnologies.com

The levels of traffic expected in 2024 relate to the cumulative effect of traffic increases resulting from the implementation of the General Plans of local agencies, including the Fresno County, were derived by applying an annual growth rate of 2% per year. The traffic generated by the cumulative and proposed project in construction phase was added to the 2024 counts to analyze the impacts in the study area which are further analyzed using synchro program.
Results shows that two of the three intersections operate beyond the target level of service, if all three projects have their peak construction activity at the same time. Results are shown in Exhibit 5.

Capacity analysis worksheets are included in the attachments.

SIGNAL WARRANT ANALYSIS

Warrants for the installation of traffic signal control are established in Chapter 4C of the CA MUTCD. The information in Attachment B compares near term project impacts with the appropriate warrants. One of the study area intersections(SR 33 and Manning Ave) was warranted for the traffic signal warrant.

Please feel free to contact us if you have any questions.

INTERSECTION	CONTROL	TARGET LOS	PEAK HOUR	NEAR TERM PLUS PROJECT CONSTRUCTION TRAFFIC	
				DELAY	LOS
SR 33 and Adams Avenue	Two- Way Stop	D	AM	28.1	D
			PM	68.7	F
SR 33 and Manning Avenue	Two-Way Stop	D	AM	35.5	E
			PM	>100.00	F
Adams Avenue and Project Access	One-Way Stop	D	AM	8.5	A
			PM	9.1	A

DELAY is measured in seconds

LOS = Level of Service / **BOLD** denotes LOS standard has been exceeded

* No traffic were observed in cross street, so LOS A is assumed in such intersections

For stop controlled intersections, delay results show the delay for the worst movement

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech), was retained by Heartland Solar 1, LLC (Applicant), a wholly-owned indirect subsidiary of Clearway Energy Group, LLC, to conduct a water supply assessment (WSA) for the proposed Heartland Solar Project. This WSA presents the methodology, results, and recommendations in accordance with Senate Bill (SB) 610 and SB 221, adopted in 2001, amending the California Water Code to require that certain types of development projects prepare a WSA. The detailed discussion of water supply availability and reliability given in this report is intended to provide local decisionmakers with key water supply information prior to Project review and approval. A WSA must provide (1) a description of the source(s) of water supply that will be used to meet the water demands of the proposed project over a 20-year planning horizon, and (2) an assessment of how changing climatic conditions, particularly long-range drought potential, could affect the area if a project is implemented (DWR 2003).

This WSA has been prepared as required under the California Water Code, amended by SB 610, to provide an examination of the availability of water supply source(s) to meet the expected water demands of the Project. This review considers conditions under multiple scenarios: (a) a normal year (the “no drought” scenario), (b) a single-dry-year (the “limited drought” scenario), and (c) multiple dry-years (the “extended drought” scenario), over a 20-year planning horizon. The WSA accounts for not only the Project’s water demand, but also all other existing and planned future uses of the water supply, to the extent information is available.

2.0 PROJECT DESCRIPTION AND LOCATION

The Applicant proposes to construct, operate, and maintain the Project, which consists of renewable photovoltaic (PV) solar energy generation and energy storage facilities. Proposed facilities would generate approximately 300 megawatts alternating current of solar PV energy and have capacity to store up to 300 megawatts of energy on approximately 2,362 acres of private land in western Fresno County. These facilities would interconnect to the regional electrical grid via an electrical generation-tie line between the solar facility and the existing Tranquillity Switching Station, which is located approximately 1.25 miles south of the solar and energy storage facility site. The Tranquillity Switching Station is owned and operated by the Pacific Gas and Electric Company (PG&E), which is subject to the jurisdiction and oversight of the California Public Utilities Commission. PG&E also would conduct other necessary infrastructure work to support interconnection of the Project. Infrastructure and other improvements to be constructed, operated, and maintained by PG&E to support the Project are referred to as the PG&E Components. The Heartland Solar Project and the PG&E Components collectively are referred to in this document as the Project. Distinctions between the Heartland Solar Project and the PG&E Components are made as needed for clarity.

The proposed Project site is located approximately 6 miles southwest of the City of Mendota, 10 miles east of Interstate 5, east of S. San Bernardino and Los Angeles Avenues, south of W. American Avenue, west of State Route 33 (SR 33, also called S. Derrick Avenue), 0.5 mile north of W. Manning Avenue, and 1.25 miles north of the PG&E’s Tranquillity Switching Station. The Project site is located across SR 33 from the existing Adams East solar facility and immediately north of the approved Luna Valley solar facility. The Tranquillity Switching Station is located near the northeast corner of the intersection of

W. Dinuba Avenue and S. Ohio Avenue, within the boundaries of the Tranquillity Solar Generating Facility.

During construction of the proposed Project, water will be needed for normal construction-related uses, including (but not necessarily limited to) dust suppression, soil compaction, and grading. Dust-control water may be used for ingress and egress of on-site construction vehicle equipment traffic and other construction purposes. A sanitary water supply would not be required during construction, because restroom facilities would be provided by portable units to be serviced by licensed providers.

The overall construction water usage during the construction period is expected to be approximately 400 acre-feet (AF) over an expected 40-month duration. The proposed sources of water used during construction would be groundwater from Westlands Water District (WWD), utilizing existing WWD supply infrastructure. Additional sources of potential supply would be from local water brokers who could facilitate the sale of supplemental surface water, delivered by WWD Municipal and industrial infrastructure. Water demand during construction is expected to be the same if the Project is constructed during a year with normal precipitation, a year with less-than-average precipitation, or a multiyear period of less-than-average precipitation.

During Project operations and maintenance, it is anticipated that water would be used for solar panel washing, equipment washing, and other miscellaneous water uses needed for operations. An O&M building and other associated facilities such as above ground water storage tanks will be constructed onsite, including permanent restroom facilities with septic tanks and/or portable toilets that would be used for sanitary purposes. Groundwater or surface water provided by WWD would be the supply source for O&M activities and facilities. Drinking water would be provided by commercial water services.

Panel washing would require approximately 15 to 30 days to complete per wash cycle. Water consumption is expected to be approximately 0.28 gallon per square yard of panel, based on other similar operations. Although PV panel washing is expected to occur once per year, it is possible the panels will need washing more frequently (up to twice a year) based on site conditions. Assuming one or two solar panel wash cycles per year plus typical operations and maintenance activities, the annual water usage is expected to be approximately 5 AF of water. This amount includes the water necessary for Project operations, fire suppression, and site maintenance. If panel washing is not needed, then water use for routine solar facility O&M activities would be approximately 1 acre-foot per year (AFY).

3.0 ENVIRONMENTAL AND REGULATORY SETTING

3.1 Environmental Setting and Land Use

The Project site is located in an agricultural area in northern Fresno County. The Heartland Solar Project site is within the AE-20 (Exclusive Agricultural, 20-acre minimum parcel size) Zone District. Irrigated agriculture historically occurred here; however, due to a combination of factors including lack of drainage, salt accumulation in the soil, and a legal covenant that precludes irrigation for many of the parcels, the sites no longer support irrigated agricultural land uses. In the past 10 years, the Heartland Solar Project site has been intermittently dry farmed for grain or forage crops or has lain fallow. Abandoned irrigation and drainage features are present throughout the site but are not in use.

No existing lighting is present on the site. WWD cultivates the site to control weeds and pests. Unimproved farm roads exist on the site and between the parcels that would be developed as part of the Project. The only improved (paved) roads bordering the Heartland Solar Project site boundary are W. Adams Avenue and SR 33.

Surrounding land uses consist of existing agricultural uses, including non-irrigated fields owned mostly by the WWD. These properties generally have a land use pattern of dry farming, grazing, and fallowing rotation that is similar to that of the Project site. Neighboring agricultural uses include orchards and forage and grain crops. Multiple solar facilities are operating or under development in the surrounding area, including the Tranquillity, Adams East, Luna Valley, Scarlet, and Sonrisa solar projects. The nearest residence to the Heartland Solar Project site is located at W. Adams and S. Ohio Avenue, approximately 80 feet from the Project site boundary. The nearest communities include the community of Tranquillity (approximately 8 miles to the east-northeast of the Project site), City of Mendota (approximately 6 miles to the north), and City of San Joaquin (approximately 11 miles to the east).

3.2 Climate

The Project site is located on the western edge of the San Joaquin Valley, where it transitions to the Coastal Ranges geomorphic province. Thus, it is east of the coast ranges, where east-side drainage from the mountains would drain generally toward the west and into the San Joaquin Valley. The Project site falls within the six-digit hydrologic unit identified as the Tulare-Buena Vista Lakes basin (HU6 #180300), an interior drained portion of the Great Valley Geomorphic Province (CGS 2002). The Project area contains no perennial water courses and no defined channels due to the predominance of agricultural fields and low rainfall amounts.

Rainfall is relatively rare in this part of California, which has a Mediterranean climate with wet winters and dry summers. Precipitation occurs primarily from October to March, with very little from April through September. Rainfall records were obtained for five California Irrigation Management Information System weather stations located within Fresno County (Table 1). Note that the average annual rainfall value for these weather stations is less than 12 inches per year, qualifying this area as arid.

These stations have relatively long records (mostly over 30 to 40 years), but the period of overlap is only 28 years (1997 through 2024). If only the records for the overlapping years are considered for these stations, it presents a more current and drier picture. The average annual rainfall over the shorter period for these stations (except #7 Firebaugh) is 3 to 10 percent lower.

The single driest year for the Westside Subbasin during the period from 1997 through 2024 was in 2013, when annual rainfall (averaged between the five stations) was 2.95 inches. The driest period for three consecutive years was from 2013 through 2015, when the annual rainfall total (again, averaged among the five stations) went from 2.95 inches (2013), to 6.90 inches (2014), and finally to 5.65 inches (CIMIS 2025). Exhibit 1 gives a graphical presentation of the annual rainfall totals for the five stations since 1997. The locations of the five stations, relative to the Project site, are shown on Figure 3.

Table 1. Precipitation Records

CIMIS Station	Location	Period of Record	Annual Rainfall Total (inches)		
			Low	Average	High
# 2 Five Points	Fresno County Latitude: 36.336222; Longitude: -120.11291	June 1982–March 2025 (42 years)	1.52	8.48	27.22
# 7 Firebaugh/ Telles	Fresno County Latitude: 36.851222 Longitude: -120.59092	September 1982–March 2025 (only 28 years appear consistent and valid, 1997–2024)	3.59	7.42	13.02
# 39 Parlier	Fresno County Latitude: 36.597444; Longitude: -119.50404	May 1983–March 2025 (41 years)	3.21	10.63	18.63
# 80 Fresno State	Fresno County Latitude: 36.820833; Longitude: -119.74231	October 1988–March 2025 (36 years)	2.87	11.46	19.21
# 105 Westlands	Fresno County Latitude: 36.634028; Longitude: -120.38181	April 1992–March 2025 (32 years)	2.51	6.48	17.45

CIMIS – California Irrigation Management Information System

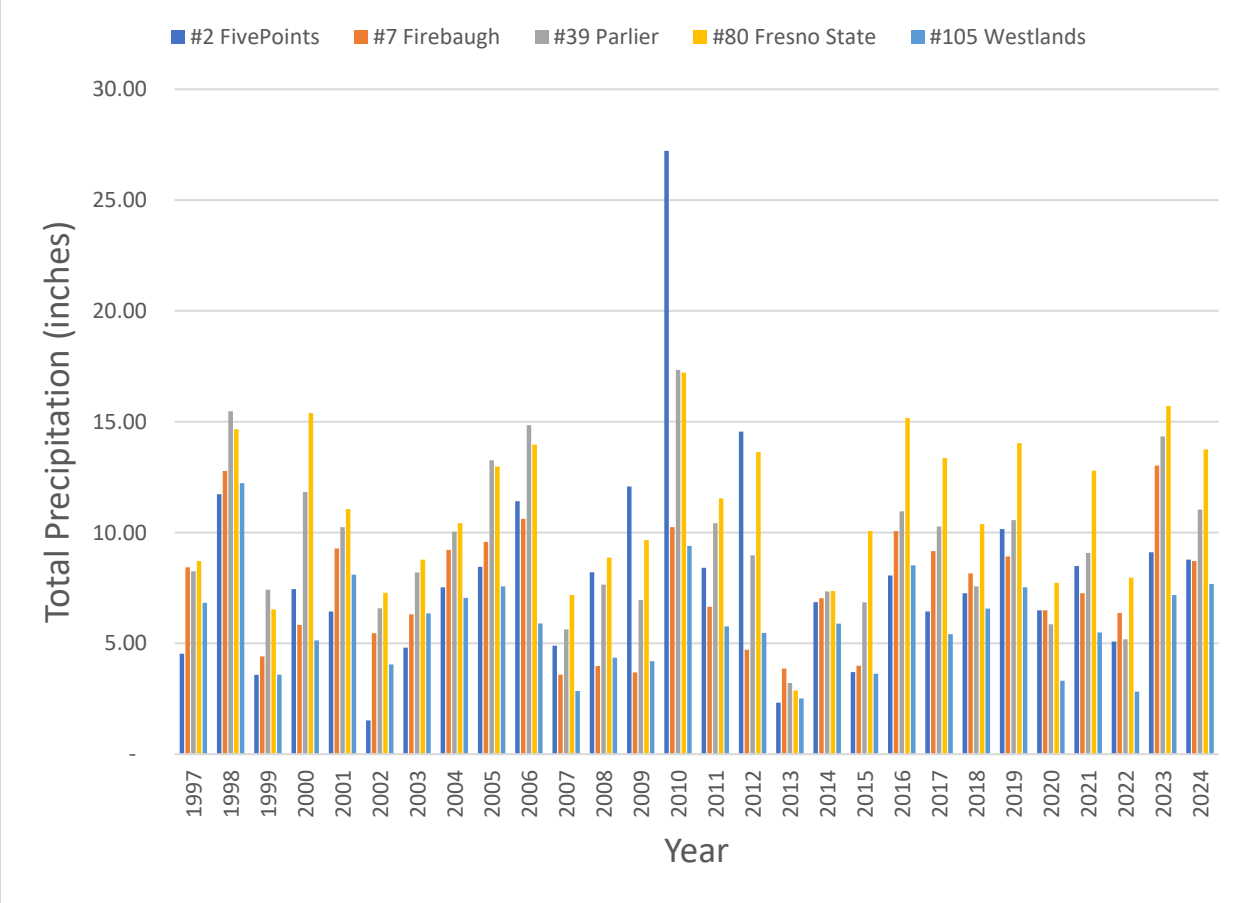

Exhibit 1. Total Annual Precipitation

3.3 WSA Applicability

California Water Code Section 10910(a) requires that a WSA be prepared for a "project" as defined in Section 10912. According to California Water Code Section 10912(a)(5), the term "project" applies whenever a proposed industrial facility, manufacturing or processing plant, or an industrial park is planned that will include any of the following:

- House more than 1,000 persons,
- Occupy more than 40 acres of land, or
- Include more than 650,000 square feet of floor area.

Because the Project site is approximately 2,362 acres, it is classified as a "project" by California Water Code Section 10912. In addition, the California Water Code (Section 10910[a]) only requires that a WSA be prepared for "projects" (as defined above) if one of the following is expected to be prepared for California Environmental Quality Act (CEQA) compliance:

- An environmental impact report,
- Negative declaration, or
- Mitigated negative declaration.

The County of Fresno Department of Public Works and Planning—the CEQA Lead Agency—is preparing an Environmental Impact Report (EIR) for the Project. Thus, a WSA is required because it is both defined as a "project" and will be reviewed in an EIR.

3.4 Public Water Supply

Pursuant to California Water Code Section 10910(b), Fresno County must:

> *…[i]dentify any water system whose service area includes the project site and any water system adjacent to the project site that is, or may become as a result of supplying water to the project identified pursuant to this subdivision [project], a public water system, as defined in Section 10912, that may supply water for the project.*

The proposed Project is located within the jurisdiction of the WWD, which provides agricultural water to users within the jurisdiction, and does not deliver treated water for human consumption and is not considered a public water system. The Project site is not connected to a public water system and there are no public water systems that can serve the proposed Project. Where that is the case, the County is required to prepare the WSA under California Water Code Section 10910(b).

3.5 Urban Water Management Plan

Pursuant to California Water Code Section 10910(c), Fresno County must:

> *…request each public water system … to determine whether the projected water demand associated with a proposed project was included as part of the most recently adopted urban water management plan.*

The California Water Code states that any public water system providing water for municipal purposes to more than 3,000 customers, or supplying more than 3,000 AF annually, must prepare an Urban Water Management Plan (UWMP). Under Water Code Section 10631, UWMPs must be updated every 5 years on or before July 1 in years ending in 1 or 6. The Project is proposed on WWD-owned lands outside the Mendota city limits on private land in northwestern Fresno County.

The City delivers less than 500 AFY of water. Aa result, the City is not required to prepare a UWMP, and thus, there is not a current UWMP that accounts for the Project's water demand. Because a UWMP is not available as a source document, this WSA uses the Luhdorff & Scalmanini Groundwater Sustainability Plan (GSP), which provides information regarding the City's water demand, water supply, and overall water reliability (Luhdorff & Scalmanini 2022). The Luhdorff & Scalmanini GSP also includes information about water resources planning, regional water supplies, the service area, and potential water demands that would be generated by proposed land use changes associated with the Project.

4.0 SUPPLY AND DEMAND ANALYSIS

4.1 Methodology for Water Resources Evaluation

This section provides a summary of the availability of surface water and groundwater resources in the region as a baseline. Local water suppliers are then identified and their capacity to provide water for the Project is summarized.

4.2 Regional Water Resources

The WWD covers a very large part of the San Joaquin Valley and almost the entire Westside Subbasin (WWD 2025). In addition to the WWD, the City of Mendota (a municipal supplier) and the Panoche Water District are other nearby water purveyors (Figure 5). In addition, there is at least one independent broker nearby (the Water Agency Inc.) that facilitates farm water transactions in the San Joaquin Valley. Table 2 lists providers and brokers with service areas near the Project site. Brief descriptions of the pertinent agencies are given below. Section 4.3 summarizes water resource availability in the Project area.

Table 2. Water Providers and Brokers in the Vicinity of the Project Site

Water Purveyor	Jurisdiction	Role
Westlands Water District	Covers nearly all of the 1,000 square-mile Westside Subbasin (5-22.09).	Westlands receives and distributes water from the Central Valley Project, which is operated by the U.S. Bureau of Reclamation.
City of Mendota	City of Mendota	The City provides a public water supply for its residents. The City's water system consists of three primary production wells (Nos. 7, 8, and 9), two emergency backup wells (Nos. 3 and 5), transmission mains, and a water treatment plant to pump and then treat water from the Delta-Mendota Subbasin.
Water Agency Inc. (an Independent broker such as	San Joaquin Valley	Facilitates farm water transactions in California's Central Valley.
Panoche Water District (PWD)	Western side of the San Joaquin Valley in both Merced and Fresno Counties.	The PWD is a California Water District serving 38,000 acres with water for agricultural uses.

4.2.1 Westlands Water District

The WWD resulted from a petition to Fresno County for the formation of a water district to help bring surface water resources to the WWD service area for irrigation use. It signed a long-term water supply contract with the U.S. Bureau of Reclamation (USBR), which was expanded after the WWD merged with the Westplains Water Storage District. Several trunk lines were constructed and a distribution network was added over time. Use of private wells to pump groundwater continues to be a significant source of irrigation water supply even today, especially during drought periods. With the passing of the Sustainable Groundwater Management Act (SGMA) in 2014, WWD and Fresno County were tasked with developing a GSP for the Westside Subbasin. An initial GSP (Luhdorff & Scalmanini 2020) was submitted to the California Department of Water Resources (DWR) for review and was not approved. A revised GSP (Luhdorff & Scalmanini 2022) was resubmitted to the DWR, and an approval notification letter from the DWR was sent in March 2023. The official determination letter was sent in August 2023 with an appended Statement of Findings and Staff Report (DWR 2023). The revised GSP and associated rules and regulations (WWD-GSA 2023) will govern the use of groundwater from the wells expected to be used for this Project (see Section 4.3).

The WWD utilizes a combination of imported surface water and local groundwater to serve its customers. The majority of WWD's customers are agricultural customers who occupy 568,000 irrigable acres out of the WWD's 614,000 total acres (Luhdorff & Scalmanini 2022).

Surface water supplies are imported from the Sacramento Delta by the Central Valley Project (CVP) via the Delta-Mendota Canal and the San Luis Canal. The amount of water received from the CVP will vary in any given year depending on the amount of precipitation received in northern California. WWD has long-term contractual and legal entitlements with the USBR for a firm supply of 1,191,185 AF of CVP water during each water year (Luhdorff & Scalmanini 2022). However, the full amount is usually not delivered, depending on the available supply. Over the past 10 years, the WWD received a 100 percent allocation only twice, while in 7 of the 10 years it was at 50 percent or less, and in 3 of those years allocations were zero percent (see Table 3). WWD supplements the remainder of its water needs through pumping of local groundwater.

WWD does not operate or manage its own local water supplies. Instead, it relies on conjunctive use of landowners to pump groundwater wells and divert surface waters. WWD has a Distribution System Integration Program that allows landowners to use the WWD's water distribution system to convey groundwater to other points of use within the WWD jurisdiction. This conjunctive use of surface and groundwater improves overall water supply reliability by making more efficient use of water that is available. In wet periods, use of surface water is encouraged to preserve groundwater supplies. In droughts, greater flexibility in the use of groundwater is facilitated to extract the maximum benefit from its resources (Luhdorff & Scalmanini 2022).

As previously noted, WWD has entitlement from CVP to a firm supply of 1,191,185 AF of CVP water during each water year. Depending on drought conditions and water supply availability in the Bay Delta, this total amount may not be delivered. In some years, WWD may acquire additional water pursuant to its entitlements, or other water from other sources. Table 3 summarizes WWD's water supply history from 1988 to 2024. As can be observed by comparing annual groundwater versus net CVP supply, the amount of

groundwater pumped from the local aquifer (the Westside Subbasin) is inversely proportional to the imported surface water received via the CVP.

Table 3. Westlands Water District – Water Supply History

Water Year	CVP Allocation %	Net CVP (AF)	Groundwater (AF)	Water User Acquired (AF)	Additional WWD Supply (AF)	Total Supply (AF)	Fallowed Acres

Source: WWD 2020; Note: * Estimated

4.3 Project Resource Availability

The specific sources of water supply for the Project would primarily include groundwater owned by WWD and supplied via WWD infrastructure. This infrastructure would likely be one or more groundwater wells within the Project area or adjacent to it (see Figure 2). It may also include the use of a water broker to find and facilitate the sale of supplemental surface water for Project use, which would be delivered via WWD municipal and industrial infrastructure. WWD has provided the Applicant with a Will Serve Letter (Appendix A) that stipulates a commitment by WWD to supply the Project with primarily groundwater for its construction, and operation needs. This includes up to 150 AF annually of groundwater for every 320 acres of Project area for construction needs. It includes up to 2 AF of groundwater annually for every 320 acres of Project area for operations, and it includes up to 5 AF annually of CVP water for every 160 acres of Project area for operations.

4.3.1 Surface Water Availability

The federal government's watershed delineation system (Jones et al. 2022) places the Project site within the eight-digit hydrologic unit (HU8) known as the Upper Dry (18030009) as well as the HU6 known as the Tulare-Buena Vista Lakes (180300). This is within the southern San Joaquin Valley portion of California's Central Valley. The natural surface water drainage in the San Joaquin Valley primarily collects surface water as rain or snow in the Sierra Nevada Mountains to the east. A lesser amount of runoff as surface water flows out of the Coast Ranges to the west, but there are no perennial streams that reach the valley floor. The surface water that flows from the Sierra Nevada Mountains into HU6 is limited to that carried by the Kern River, Tule River, Kaweah River, and Kings River, which all discharge to Tulare Lake. HU6 is topographically self-contained with no surface water flow outlets to the ocean. The Upper Dry HU8 receives a limited amount of direct rainfall and a very small amount of ephemeral runoff from drainages such as Panoche Creek coming out of the San Benito Mountains (Coast Range). Although this surface water is not a viable water supply source, it provides important inputs for groundwater recharge. It also can cause significant storm-caused flood events, enough that a small earthen dam (Little Panoche Detention Dam) was built in the watershed between 1965 and 1966 for flood control and sediment trapping (USBR 2025). A groundwater recharge enhancement project, which will include a facility on Panoche Creek, is currently in the CEQA review process (WSP USA 2025).

The most significant artificial surface water conveyance through the Upper Dry HU8 is the California Aqueduct, which runs from north to south moving surface water from the California State Water Project (SWP). SWP waters are distributed to various water agencies and districts throughout southern California. In addition, the older federally funded and operated CVP uses multiple major reservoirs to capture surface water for distribution throughout the Central Valley.

4.3.2 Groundwater Availability

The groundwater resource identified by the DWR underlying the Project in this part of the San Joaquin Valley is the Westside Subbasin (5-22.09). It is located in the southern end and western side of the San Joaquin Valley, within the Tulare Lake (surface water) Hydrologic Region (Figure 3). This surface water hydrologic region is an internally drained watershed with inflow from the Kaweah, Kern, Kings, and

Tule Rivers (all flowing west out of the Sierra Nevada Mountains). The endpoint of surface water flow is Tulare Lake, an ephemeral water body that lies south-southeast of the Project site. No surface water from the region that reaches Tulare Lake ever flows out of the region as surface water. It either infiltrates into the ground or evaporates.

The Westside Subbasin is bordered on the west by the Coast Ranges, comprising Tertiary marine sediments and sedimentary rocks, with little to no groundwater resources. The rest of the surrounding areas are other subbasins. To the north and northeast is the Delta-Mendota Subbasin (5-22.7), to the east is the Kings Subbasin (5-22.8), to the southeast is the Tulare Subbasin (5-22.12), and to the southwest is the Pleasant Valley Subbasin (5-22.10; Figure 4). In addition to a small amount of direct rainfall, recharge to the subbasin comes from three primary sources. First is the flow of intermittent stream channels discharging from the Coast Range onto the western valley edge where it seeps into the ground. Second is the deep seepage of water spread over the basin for the purpose of irrigation. The third and final source is inter-basin groundwater flow from the eastern edge of the subbasin (DWR 2006).

The aquifer system within the Westside Subbasin includes a shallow, unconfined aquifer comprising unconsolidated continental deposits of Tertiary and Quaternary age sediments that reach depths of 500 feet to 850 feet below ground surface. Underlying the shallow aquifer is an aquitard known as the Corcoran Clay, separating it from the deep, confined aquifer. The Corcoran Clay varies in thickness from 20 feet to 120 feet. Some usable groundwater is found in the upper levels of the confined aquifer, but brackish water is found in the deepest parts of the confined aquifer. There are wells that draw groundwater from both the deeper, confined aquifer and the shallow, unconfined aquifer (DWR 2006).

Groundwater has been used in this part of the valley since the 1800s, primarily for agricultural purposes. Most of the wells initially drilled were shallow, drawing groundwater from the upper, unconfined aquifer. Just after the turn of the century, the first deep well (to a depth of 700 feet to 800 feet) was drilled near the present-day Lemoore Naval Air Station, east northeast of the Project site. Agriculture expanded in the subbasin through the 1940s with irrigation exclusively using groundwater. In 1963, the WWD agreed to a water supply contract with the USBR to augment the use of groundwater for agriculture. The WWD has expanded its coverage area, initially in 1965 when it merged with the Westplains Water Storage District, and subsequently with additional annexation of land. The WWD now includes 614,700 acres of agricultural land (WWD 2025).

Because of the intensive agriculture in the subbasin and heavy reliance on groundwater, a significant volume of water has been pumped from the subbasin over the past 100 years. The result has been a substantial amount of land subsidence over a large portion of the subbasin. In some areas of the subbasin, land subsidence has been greater than 8 meters (USGS 2016). Subsidence was identified as early as the 1920s and has been monitored since the 1970s. Starting in the 1960s, groundwater pumping was relieved to an extent by the introduction of imported surface water (Table 4). While some recharge of groundwater has been accomplished with imported surface water, heavy drought cycles since 1970 have only increased the reliance on groundwater. As a result, recharge has been reduced in many areas and temporarily eliminated in others (Sneed and Brandt 2015).

Adjudication

The Westside Subbasin is not adjudicated, meaning that landowners may extract groundwater underlying their property without a permit regulating groundwater extraction. Landowners may use the groundwater on a “equal and correlative” basis, and all property owners have a shared right to reasonable use of the aquifer.

Sustainable Yield

The sustainable or safe yield is the amount of groundwater that can be extracted without significantly impacting the resource or substantially lowering the groundwater level over the long term. Based on historical pumping data, measurements of change in aquifer storage, and long-term projections of water availability under various climate change scenarios, sustainable yield was estimated to range from 267,000 AFY to 294,000 AFY (Luhdorff & Scalmanini 2022).

Groundwater Level Trends

Aquifer levels vary on an annual basis, depending on the amount of water that has been added to the aquifer (recharge and inter-basin transfers) and the amount removed (groundwater pumping). Drought and subsequent increases in pumped water, as well as increased periods of precipitation, all affect groundwater levels. Historically, groundwater levels were generally at their lowest levels in the late 1960s prior to the importation of surface water. When the CVP began delivering surface water in 1967 and 1968, water levels began to increase to maximum levels in 1987 and 1988, after declining briefly from 1967 through 1977 due to drought conditions. Water levels again dropped from 1987 through 1992 due to drought conditions. Water levels continued to show effects until 1994. After a series of wet years, water levels recovered, starting in 1998, to levels that nearly reached 1987–1988 levels (DWR 2006). Groundwater elevations and the estimated amount of groundwater pumped for a 60-year period between 1956 through 2015 are included in Table 4.

This table shows the “average” elevation of groundwater in the lower water bearing zone above mean sea level over a period of 60 years. These data indicate that groundwater levels in the Westside Subbasin are directly affected by the amount that is pumped from the basin. Groundwater levels fall the most following years when pumped amounts were greatest. It also shows that groundwater levels recover during years of low pumping. Following years when pumped amounts exceeded safe yield, groundwater levels show an almost immediate recovery. During the drought in 1987 through 1992, water levels reached a low of -62 feet in 1992 when pumping was at a high of 600,000 AF. The next year, in 1993, water levels recovered 63 feet to an elevation of 1 foot.

Table 4. Westlands Water District – Groundwater Pumping Versus Groundwater Level

Year	Groundwater Pumped (AF)	Elevation Above Mean Sea Level (feet)	Elevation Change (feet)	Year	Groundwater Pumped (AF)	Elevation Above Mean Sea Level (feet)	Elevation Change (feet)
1956	964,000	-65	-13	1986	145,000	71	8

Source: WWD 2015

SGMA established a framework for long-term protection of groundwater through: (a) careful resource evaluation and monitoring, (b) instituting agency responsibility and accountability, and (c) prioritizing basins based on the state of the groundwater resource (DWR 2024a). The WWD was designated as the groundwater sustainability agency (GSA) responsible for the Westside Subbasin. In this role, the WWD has developed, and is in the process of implementing, the GSP to help avoid undesirable results (like overdraft and subsidence) and help mitigate such results (Luhdorff & Scalmanini 2022). The Westside Subbasin (5-22.09) is a critically overdrafted subbasin and, as such, is designated as a high-priority

subbasin (those basins having the greatest need for planning and mitigation). The State therefore requires that a GSP be prepared to provide for that management (DWR 2024a).

4.4 Project Water Demand

The Project would require a short-term, temporary water supply during the construction period (approximately 40 months), and a long-term water supply during the operational period (projected to be 35 years). The anticipated water requirements for each of these periods, in terms of their annual rate and total demand, are summarized in Table 5. The water demand estimates summarized in Table 5 are evaluated for the WSA's required 20-year projection and the Project's anticipated operational lifespan of 35 years. These demands allow an analysis of the availability and reliability of the existing water supply for the Project.

Table 5. Estimated Project Water Demand

Project Phase	Annual Demand (AFY)	Total Demand (AF)
Construction[1/]	133	400
Operation and Maintenance[2/]	5	175
TOTAL DEMAND	**–**	**575**

Notes:
1/ The Project construction period is estimated at approximately 40 months (or 3 years and 4 months). The full Project construction water demand will occur over this period. Construction-period water demand is estimated to be approximately 400 acre-feet (AF) regardless of the duration of construction. A longer construction period would result in a lower annual construction demand.
2/ Operations and maintenance period is assumed to be 35 years. This is 15 years longer than the 20-year projection required to be considered in a Water Supply Assessment. The 35-year period is considered for full disclosure and conservative analysis; this table presents all anticipated water demands of the Project over its anticipated operational lifespan.

The estimated water demand (construction plus operation) for the Project, amortized over 38 years, is approximately 15 AFY. The actual demand sequence is front-loaded, with 70 percent of the total water use in the first approximately 3 years or 40 months (construction period, approximately 133 AFY), and 30 percent over the subsequent 35 years (operations period, approximately 5 AFY).

4.4.1 Construction

The estimated construction period annual water demand (approximately 133 AFY) would average about 0.51 AF (166,184 gallons) per workday over the Project's anticipated 40-month construction period. Project construction demand is anticipated to be met with local groundwater, pumped from the Westside groundwater subbasin.

4.4.2 Operation and Maintenance

The long-term operational water demand for the Project (approximately 5 AFY) is expected to be met by local groundwater, pumped from the Westside groundwater subbasin.

4.5 Water Supply

The specific sources of water supply for the Project primarily include groundwater owned by WWD and supplied via WWD infrastructure. This infrastructure would likely be one or more groundwater wells within the Project area or adjacent to it (Figure 2). It may also include the use of a water broker to find and facilitate the sale of supplemental surface water for Project use, which would be delivered

via WWD municipal and industrial infrastructure. The WWD utilizes a combination of imported surface water and local groundwater to serve its customers. The WWD groundwater would be sourced from the Westside groundwater subbasin.

While the Westside Subbasin is classified as an over-drafted basin and has been designated as a high-priority subbasin under SGMA (DWR 2024b), its water levels are well managed and have showed signs of not only stabilizing but recovering in recent years. Further, the Westside Subbasin provides significant storage capacity for groundwater and projected increases in water demand provide significant opportunity for increased aquifer storage.

4.6 Water Sufficiency Assessment

The CVP imported surface water allocation to WWD is shared between agriculture and incidental non-agricultural water users. Although most WWD customers are agricultural users, some are non-agricultural municipal and industrial users. It has been the policy of USBR to deliver CVP water at a minimum of 75 percent of historical municipal and industrial use, even when agricultural allocations are considered less than that. Historically, when the overall water supply has been reduced, the non-agricultural water allocation may not be reduced by a similar percentage. In certain cases of severe reduction, it is likely that WWD would receive CVP hardship water for health and safety purposes based on the statement of need. WWD water allocated from CVP for non-agricultural use is the last to be curtailed in water shortage situations and can be considered a fairly stable source of water for the proposed Project (WWD 2015).WWD has indicated that the Project, as a solar power project, is eligible for municipal and industrial water and has provided a Will Serve Letter, included as Appendix A. Reliability of water supplies used by WWD is dependent on effective management. It is reasonable to assume that the WWD would not use or distribute their allocated water supplies in a manner that would negatively affect long-term reliability.

During drought years, WWD relies heavily on groundwater resources from the Westside Subbasin. As was shown from historical data of groundwater pumping versus groundwater levels (Table 2), overdraft of groundwater as a result of higher groundwater pumping seems to have no long-term effects on the groundwater basin. In fact, prior to the introduction of CVP water to the region in 1967–1968, average pumping from the basin was approximately 895,000 AFY between 1956 and 1966, and as a result groundwater levels reached an all-time low water level of -156 feet (below mean sea level) in 1967. Following the introduction of CVP water in 1967, average pumping from the basin dropped to approximately 380,000 AFY for a 10-year period between 1967 to 1978, and groundwater levels recovered 152 feet to a water level of -4 feet in 1978. This trend suggests that any potential overdraft conditions resulting from heavy groundwater pumping are temporary in nature.

Safe yield for the Westside Subbasin is currently estimated to be between 267,000 AFY and 294,000 AFY. The proposed Project requires a total of approximately 400 AF over 40 months for construction activities, or approximately 133 AFY. If the construction water were to be equally distributed over 3 years, this would equate to 0.04 percent of the basin safe yield for each of the 3 years.

4.7 Mitigation Measures

The results of this WSA indicate that the Project would have a secure supply of water from the Westside groundwater subbasin, as referenced within the WWD Will Serve Letter (Appendix A). Additionally, to ensure that the subbasin is sustainably managed, WWD has committed to the following projects to address sustainability goals, meet measurable objectives, and avoid causing undesirable results within the subbasin (Luhdorff & Scalmanini 2022). These include the following five projects.

Project Number 1. Surface Water Imports

Historically, surface water imports supplied the majority of agricultural, municipal, and industrial water demand in the Subbasin. This is expected to continue reducing the demand and reliance on groundwater within the Westside Subbasin during the 50-year GSP planning and implementation horizon. Project No. 1 will improve both the reliability and availability of surface water; therefore, it serves to reduce the Subbasin's reliance on groundwater, which helps achieve the GSP goal.

Project Number 2. Initial Allocation of Groundwater Extraction

This management action requires the GSA to allocate and manage groundwater pumping among water users to avoid undesirable results. In particular, the GSA's objective in developing an allocation of groundwater is to enable the continued beneficial use of groundwater for the current and planned uses within the Subbasin in a cumulative quantity that will avoid identified undesirable results that have been identified. The allocation plan provides each person with land overlying the Subbasin continued access to groundwater in accordance with the allocation plan.

Project Number 3. Aquifer Storage and Recovery

Aquifer Storage and Recovery is being investigated by WWD as a conjunctive use strategy to improve water supply reliability within the Subbasin. Because there is a predominance of fine-grained soils combined with the occurrence of the Corcoran clay throughout the majority of the Subbasin, there are limited opportunities for surface recharge within the Subbasin to benefit lower aquifer groundwater conditions (Luhdorff & Scalmanini 2022). As a result, the GSA has proposed implementing a large-scale agricultural Aquifer Storage and Recovery program, through artificial injection wells, as a more pragmatic alternative to enhance subsurface recharge in the Subbasin.

Project Number 4. Targeted Pumping Reductions

Historic and projected land subsidence will significantly and adversely impact the ability for the USBR and DWR to convey water without implementing new design and construction measures to mitigate the impacts to aqueduct operations from subsidence. Consequently, the GSA has developed a process to require groundwater pumping reductions in portions of the Subbasin and when necessary to immediately and directly relieve the groundwater pumping stress when continued pumping would produce significant undesirable results.

Project Number 5. Percolation Basins

Managed aquifer recharge through percolation basins is being considered by the GSA as an additional groundwater replenishment strategy within the Subbasin. Soils within 6 feet of the ground surface in

many areas of the Subbasin are predominantly composed of fine-grained material, which limits recharge to the aquifer system. However, there are areas where soil properties are suitable for possible recharge basins. The GSA is currently investigating the use of dry wells within percolation basins to enhance groundwater recharge.

5.0 WATER AVAILABILITY CONCLUSIONS

During drought years, WWD relies heavily on groundwater resources from the Westside Subbasin. As was shown from historical groundwater pumping volumes versus groundwater levels (Table 3), overdraft of groundwater because of higher groundwater pumping seems to have no long-term effects on the groundwater basin. Prior to the introduction of CVP water to the region in 1967–1968, average pumping from the basin was approximately 895,000 AFY between 1956 and 1966. During this period groundwater levels reached an all-time low water level of -156 feet in 1967. Following the introduction of CVP water in 1967, average pumping from the basin dropped to approximately 380,000 AFY for a 10-year period between 1967 to 1978, and groundwater levels recovered 152 feet to a water level of -4 feet in 1978. This trend suggests that any potential overdraft conditions resulting from heavy groundwater pumping are temporary.

Safe yield for the Westside Subbasin is estimated in a range between 267,000 AFY and 294,000 AFY. The proposed Project requires a total of approximately 400 AF over 40 months for construction activities, or approximately 133 AFY. If the construction water were to be equally distributed over 3 years, this would equate to 0.04 percent of the basin safe yield for each of the 3 years. The Westside Subbasin is under the management of WWD, and they have prepared a GSP to manage the basin and ensure that it is sustainable through the next 20 years and beyond. WWD has also committed to supplying the Project with Westside Subbasin groundwater for its construction and operations water use needs (Appendix A).

APPENDIX A: WILL SERVE LETTER

Westlands Water District

April 8, 2025

Sarah Linden
Clearway Energy Group LLC
c/o Heartland Solar I, LLC
100 California Street, Suite 650
San Francisco, CA 94111

Re: Heartland Solar I LLC Solar Project

Dear Ms. Linden,

Westlands Water District (District) has reviewed the operational statement for the proposed solar generation project, Heartland Solar I LLC (Project). After reviewing the operational statement, we have the following comments about the Project:

1. The Project lies within the District boundary. This land does not receive an allocation of water from the District's agricultural water supply. The Project is eligible to receive water through the District's Municipal and Industrial (M&I) supply and the land will continue to have access to the District's distribution system.

2. The District has adopted regulations governing the application for and use of M&I water (Regulations). The Regulations stipulate the quantity of water that will be made available to a water user from the District's Central Valley Project (CVP) contract supply. The District will make available up to five (5) acre-feet per 160 acres of developed solar, annually for operations. A copy of the Regulations is also provided for your information.

3. Clearway must submit an M&I application for consideration in order receive M&I service. Once approved an M&I meter will be installed near the project site, at the applicant's expense.

4. The District, as the owner of the groundwater rights, on the Project site, will authorize up to 150 acre-feet of groundwater pumping annually for every 320 acres acquired, during the construction period only.

5. The District, as the owner of the groundwater rights, on the Project site, will authorize up to 2 acre-feet of groundwater pumping annually for every 320 acres acquired, during the operation period, following construction.

Thank you for the opportunity to assist in this matter. If you have any additional questions, please feel free to contact Alma Antuna at 559-241-6235.

Sincerely,

Stephen Farmer
Chief Administrative Officer
