

The presentation was a strange format that was not cohesive. I would recommend a traditional presentation format. Also, take into consideration that the general plan does not cater to the specific needs of smaller communities like Lanare & Riverdale.

What are the details of the general plan relating to the agricultural ~~and~~ environmental impacts that are already developed in these

communities with little regulation at the very
expensive cost of the community's well-being
(air & water pollution, bad road conditions from
heavy machinery, manure transport that
creates unsafe road conditions). Will
farming land also be considered in the
zoning ordinance.
